Sezione tecnica

Technical overview

Introduzione

In un cilindro i fattori che influenzano l'intero sistema di tenuta sono molteplici e vanno tutti presi in seria considerazione fin dalla fase di progettazione. Anche il costruttore di ogni singolo componente quale una tenuta, un raschiatore o un anello di guida, deve sentire questa responsabilità utilizzando i materiali più idonei e progettando i profili più adatti. La collaborazione fra entrambe le parti diviene così fondamentale per la realizzazione nel tempo di un team unico che mette a disposizione informazioni ed esperienze con lo scopo di migliorare sempre il proprio prodotto.

Un semplice rapporto cliente/fornitore non fa parte delle nostre aspettative.

Nei paragrafi che seguono ARTIC SEALS intende perseguire questa filosofia di lavoro iniziando a puntare l'obiettivo sui fattori che intervengono durante l'esercizio di un sistema di tenuta e proseguendo con ulteriori informazioni e consigli di carattere generale.

Pressione

Valori di pressione troppo elevati combinati con giochi d'accoppiamento eccessivi tra stelo/testata e camera/pistone, nel medio termine, provocano un deterioramento della guarnizione causato dall'estrusione con conseguenti perdite del fluido. Oltre alla normale pressione di esercizio generata dal sistema idraulico, nel cilindro possono intervenire altre pressioni: variabili, improvvise di valore altissimo. Ciò accade quando la macchina, equipaggiata con cilindri idraulici, a causa di fattori esterni, incorre in situazioni anomale e di forte carico. I picchi di pressione che ne conseguono influenzano negativamente tutto il sistema.

In situazioni opposte e cioè con pressioni modeste o prossime allo zero diviene più apprezzabile la qualità e la conseguente efficacia della guarnizione. La perfetta tenuta è infatti più difficile da realizzare perchè affidata principalmente al modulo elastico

Introduction

The sealing capability of a cylinder is influenced by many factors and these factors must be taken into consideration starting from the project phase. The manufacturer of each single component, like a seal, wiper or wear ring, has a responsibility on the proper function of the cylinder and must therefore consider the most appropriated materials and design the most suitable profiles. This target can be only reached when there's a team able to concentrate the synergies between the parties involved (manufacturer of the final product and sealing elements manufacturer) and interchanging information and experience in order to continuously enhance the products.

In the next paragraphs we'll focus on the factors influencing the sealing systems according to ARTIC SEALS' philosophy.

Pressure

Too high pressure values, combined with important clearance between rod/head and bore/piston couplings may cause on medium term basis, seal wear and therefore leakages because of extrusion effects. In addition to the normal working pressure made by the hydraulic system, inside the cylinder we may have other pressures, variable, sudden and with very high value. It can be caused when the machine, equipped with hydraulic cylinders, needs to face abnormal situations with high loads, because of external factors.

The originated pressure peaks negatively influence all the system.

In opposite conditions (low pressures) the quality and efficiency of the sealing element become more appreciable because a perfect sealing is more difficult to be obtained since it's mainly influenced by the material elastic modulus and its profile,

del materiale con cui è realizzata ed al suo profilo, progettato per ottimizzare il precarico iniziale di montaggio. L'assenza o quasi di pressione non permette il relativo carico dei labbri della guarnizione contro la superficie di contatto. In entrambe le situazioni risulta appropriato l'impiego di tenute specifiche. La gamma dei prodotti proposta offre un'ampia scelta di profili che, abbinati a varie tipologie di materiali come poliuretani, gomme e polimeri in PTFE, trovano la soluzione ideale in tutte le applicazioni.

Temperatura

In un cilindro la temperatura del fluido, quella generata dall'attrito dell'elemento di tenuta e quella ambientale influenzano notevolmente il comportamento delle guarnizioni e le loro prestazioni.

I valori critici che vengono presi in considerazione, oltre i quali possono comparire problemi, sono quelli superiori a 90° C e inferiori a -30° C.

In entrambi i casi varia notevolmente la viscosità del fluido e il suo potere di lubrificazione, basilari per il mantenimento del microfilm d'olio che si crea tra il labbro di tenuta e la superficie di scorrimento. Tale pellicola lubrificante è funzione della pressione idrodinamica generata dalla velocità del sistema ed in sua assenza l'attrito che ne deriva "brucia" la guarnizione in poco tempo.

A queste temperature il rischio maggiore è però una conseguente variazione di stato dell'elemento di tenuta che riguarda la composizione del materiale, la sua forma e la sua durezza. Il GRUPPO GAPI, con la sua vasta gamma di prodotti e materiali può soddisfare tutte le variazioni di temperatura in un campo di applicazione che è compreso tra -50°C e +220 °C.

developed to optimize the initial assembling preload. The use of specific sealing will be required in both cases.

Artic Seals finds the right solution in all applications, thanks to the wide range of profiles, combined with different materials as Polyurethanes, Rubber compounds and PTFE compounds.

Temperature

Fluid and ambient temperatures, as well as the temperature generated by the friction of the sealing element, considerably influence the behaviour and performance of the seals inside a cylinder.

The critical values originating some of the problems can be considered temperatures higher than 90° C and lower than -30° C.

In these two cases huge changes appear in the viscosity of the fluid and in its lubricating power both of which are fundamental to maintain an oil microfilm between the sealing lip and the running surface.

This lubricating film is related to the hydraulic pressure resulting from the system speed. The friction created in case of absence of the film will quickly "burn" the seal.

The main risk at these temperature could be a change of the sealing element, influencing the material composition, shape and hardness. GAPI GROUP, thanks to the wide range of products and materials can satisfy all temperature variations in the operating range from -50°C up to +220°C.

Velocità

Quando si parla di velocità alcune sono le variabili da tenere in considerazione: la rugosità delle superfici di contatto, la temperatura dell'olio, la pressione d'esercizio.

Queste tre variabili insieme al tipo di materiale della guarnizione possono determinare il valore massimo della velocità sostenibile dal sistema.

La velocità con valori compresi tra 0,03 e 0,3 m/s normalmente non compromette il funzionamento del sistema di tenuta.

In presenza di velocità molto basse la modesta pressione idrodinamica non riesce a mantenere costante lo spessore del meato d'olio che si crea tra i labbri della guarnizione e superficie di scorrimento. Esso tende a rompersi e ricrearsi in continuazione e l'attrito che ne deriva genera un movimento a "scatti" (stick slip) con conseguente usura della guarnizione.

Al contrario, a velocità troppo elevate la pressione idrodinamica tende invece a "staccare" il labbro di tenuta dalla superficie di contatto. In questa zona aumenta la temperatura e diminuisce la viscosità del fluido con conseguente perdita.

Le tipologie di materiali proposte da ARTIC SEALS riescono a soddisfare tutte le esigenze di variazioni di velocità. L'utilizzo di varie mescole di poliuretani, di gomme e di compound di PTFE, permettono di operare in tutte le diverse velocità richieste.

Fluidi

In un cilindro idraulico sono normalmente utilizzati oli a base minerale oppure oli ecologici biodegradabili.

Le caratteristiche di ciascun tipo di fluido vengono abitualmente vagliate dal produttore e dall'utilizzatore finale in base ad esigenze specifiche.

Possono però insorgere dubbi sulla compatibilità

Speed

Some factors have to be taken into consideration when evaluating the speed: in particular the contact surfaces roughness, the oil temperature and the operating temperature.

These three factors combined with seal material, influence very much the maximum speed the system can support.

Speed values between 0.03 to 0.3 m/s do not usually compromise the functioning of the sealing system.

In the case of very low speed, the minimal hydraulic pressure cannot ensure a standard thickness of the oil film between the seal lips and the sliding surface. The film will rather break and reform continuously. The resulting friction will induce a stick slip effect and result in the wearing of the seal.

On the opposite side, in the case of excessive speed, the hydraulic pressure may "detach" the sealing lip from the contact surface. In this area the temperature will rise up and the fluid viscosity will fall. Leakages will occur.

The different materials proposed by Artic Seals can satisfy all the speed variation requests. The use of different compounds of polyurethane, rubber and PTFE allows working with different operating speeds.

Fluids

Mineral oils or green biodegradable oils are mainly used in a hydraulic cylinder.

The manufacturer and the end-user generally check the characteristics of each fluid, according to their specific requirements.

However doubts can arise regarding the compatibility between oils and sealing systems. Many tests have been carried out with positive

con le guarnizioni di tenuta.

Sono stati effettuati parecchi test, soprattutto con oli ecologici, che hanno sempre dato esito positivo. Quando però manca questa sicurezza, per esempio nel caso di un lubrificante poco noto o comunque mai testato, ARTIC SEALS si rende disponibile a verificare la compatibilità nel proprio laboratorio. In caso di fluidi diversi da quelli tradizionali o comunque addizionati con sostanze particolari si pone il problema della resistenza chimica delle guarnizioni.

La tabella 1 che segue vuole fornire indicazioni in tal senso e si riferisce specificatamente ai materiali utilizzati da ARTIC SEALS.

Materiali

Gli elementi di un sistema di tenuta sono molteplici ed ognuno deve avere caratteristiche che gli permettano di svolgere la propria funzione nel migliore dei modi ed in condizioni non sempre simili. La scelta dei materiali assume così un'importanza tale da farne il primo fattore strategico per ogni costruttore.

ARTIC SEALS, forte della propria esperienza, ha scelto:

- resine uretaniche in cinque differenti tipologie. Presentano tutte alto modulo elastico e bassa deformazione permanente e con durezza diverse a seconda dell'utilizzo. Con esse vengono realizzate guarnizioni di tenuta per stelo e pistone, anelli raschiatori ed alcuni tipi di tenuta statica;
- resine acetaliche di due differenti tipologie. La prima caricata con fibre di vetro ed elevata resistenza alla deformazione permanente sotto carico, utilizzata in oleodinamica. La seconda, priva di cariche, ma additivata con sostanze autolubrificanti, impiegata in pneumatica quando direttamente a contatto con metalli teneri come l'alluminio e l'ottone. Con esse vengono realizzati anelli di guida per steli e pistoni o componenti aventi la stessa funzione di alcune guarnizioni

results, in particular with green Oils. Artic Seals is available to carry out tests of compatibility on unknown lubricants or oils without any literature regarding the compatibility; the tests will be made in the Artic Seals laboratory. This can be very helpful when the lubricants aren't standard and/or contain particular additives which could influence the chemical resistance of the seals. The table 1 provides indications about the compatibility and is referred to the Artic Seals' material.

Materials

A sealing system is made of several components each one having properties.

These properties allow the component to work in proper way in different conditions.

Therefore, the first strategic factor for the manufacturer is the right choice of materials.

Artic Seals, thanks to the long experience, selected the following materials:

- *five types of urethane resins. They have a high modulus of elasticity, low compression-set and hardness according to the application. They are used for rod and piston seals, scraper rings and some static seals production.*
- *two types of acetalic resins. The first one, used for hydraulic applications, is filled with fibreglass and has low compression-set. The second one is not filled but contains self-lubricant additives. It's used in pneumatic systems where there is direct contact with soft metals (like aluminium or brass). They are used for rod and piston wiper rings or other components production, having the same function of the composite seals.*
- *filled polyester resins, used in the production of anti-extrusion rings and in some composite seals;*

Condizioni di prova: a temperatura ambiente - testati su provette

Operating conditions: room temperature - tested specimens

- composte;
- resine poliestere e caricate, utilizzate per la costruzione di anelli antiestrusione e di alcuni particolari di guarnizioni composte;
- elastomeri di mescole differenti a seconda dell'applicazione. Il più utilizzato è quello a base nitrilica NBR per la costruzione di o-ring o di alcuni componenti di guarnizioni composte. Più specifiche altre mescole (FKM, EPDM, ecc..) descritte nella sezione o-ring a pagina 133;
- polimeri in PTFE vergine o caricati con diversi additivi quali il vetro, il carbone, la grafite, il bronzo ed altre cariche minori. Con lavorazione meccanica vengono eseguiti profili che in tandem ad anelli espansori garantiscono la tenuta.

Nota:

Eventuali variazioni di tonalità di colore possono verificarsi quale garanzia di utilizzo di master-batch esenti da metalli pesanti. Tali leggere variazioni non influiscono sulle caratteristiche meccaniche delle guarnizioni.

Descrizioni più dettagliate e proprietà fisiche dei materiali sono presenti nel catalogo alle sezioni inerenti ai particolari con essi costruiti.

Rugosità superficiali

La durata e l'efficacia di una guarnizione dipendono dalla qualità della superficie dell'area di contatto. Graffi, fori, porosità, segni di lavorazione di utensile non sono ammessi.

E' necessario porre molta attenzione alla qualità delle superfici, soprattutto dove scorre dinamicamente la guarnizione (vedi Tabella 2). I parametri utilizzati per definire la finitura superficiale sono Ra, Rz, Rmax e sono in conformità alla ISO 4287/1.

La Tabella 3 evidenzia chiaramente che non è sufficiente considerare solo i valori di Ra e Rz per valutare il tipo di guarnizione da adottare. I picchi superficiali mostrano chiaramente che a

- elastomers in different compounds according to the application. The most used is NBR (Nitrile butadiene rubber) , used for o-rings or some composite seals. Other compounds are more specific (FKM, EPDM, etc..) and are described in the o-ring section page 133;
- virgin or filled PTFE polymers with different fillers like glass, carbon, graphite, bronze and other fillers. The shape is obtained by mechanical process then expanders rings are combined to grant the sealing.

Remarks:

Possible deviation in colour may occur due to the use of heavy metal-free master batches. Such a slightly variation does not influence the mechanical characteristics of the seals.

More detailed information and the physical properties of the materials, can be found in the section of each specific sealing part.

Surface roughness

The service life of a seal depends on the quality of the contact area's surface.

Scratches, holes, snicks, porosity and tooling mark should be avoided.

It's very important to take care about the quality of the surfaces, in particular where the seal slide dynamically (see Table 2).

The most common parameters to define the surface quality are Ra, Rz, Rmax and they're in accordance with ISO 4287/1.

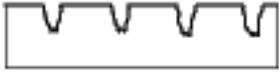

Table 3, in order to select the seal to be used, couldn't be enough the evaluation of the Rz and Ra values. The surface peaks clearly show that in case of equal values of Rz and Ra, the profile having less

parità di valori R_a e R_z , il profilo con minori asperità (vedi RMR) ha con la guarnizione una maggiore superficie di contatto con evidente beneficio per la durata della stessa.

Per i materiali utilizzati da ARTIC SEALS sono consigliate le rugosità di lavorazione qui di seguito indicate in tabella 3:

| Tab. 2 - rugosità superficiale / surface roughness | | |
|--|---|-------------------------------|
| | superficie di scorrimento consigliata per il poliuretano <i>sliding surface recommended for polyurethane</i> | superficie della cava statica |
| R_{ms} | 1,00 - 4,00 | < 10,0 |
| R_{zDIN} | 0,63 - 2,50 | < 6,3 |
| R_a | 0,10 - 0,60 | < 1,6 |

peaks (see RMR) present a wider contact surface with the seal and this will give the seal a longer lifetime. The working roughness suggested for the materials to be used with our seals are indicated in the following table 3.

| Tab. 3 - profili superficie/ surface profile | | | |
|--|-------|-------|----------|
| Profillo superficie <i>surface profile</i> | R_a | R_z | R_{ms} |
|  profillo aperto <i>open profile</i> | 0,25 | 1 | 15% |
|  profillo chiuso <i>closed profile</i> | 0,25 | 1 | 70% |

Gioco di accoppiamento

L'ampiezza massima consentita del gioco di accoppiamento tra testata/stelo e pistone /camicia deve essere attentamente valutata affinché non intervengano problemi di estrusione nella parte posteriore della guarnizione. (vedi fig. 1 e 2)

Tale gioco dipende principalmente dalla durezza del materiale con cui è costruita la tenuta, dalla pressione massima presente nel cilindro, dalla temperatura e dalla resistenza al carico radiale degli anelli di guida.

Coupling clearance

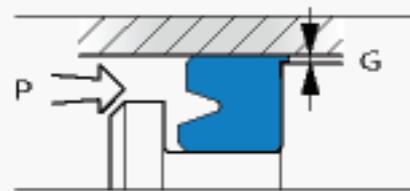

The maximum coupling clearance width allowed between head/rod and piston/bore must be carefully evaluated to prevent extrusion problems at the rear of the seal. (see fig. 1 and 2)

Such clearance depends mainly on the hardness of the seal material, on the maximum pressure in the cylinder, on the temperature and on the radial load resistance of the wear rings.

Fig. 1

Fig. 2

Nella tabella 4 qui di seguito si vede il gioco di accoppiamento che si deve mantenere tra stelo/testata e tra pistone/camicia. Il test è stato eseguito con olio a temperatura a 60° C con materiale 93 Shore A.

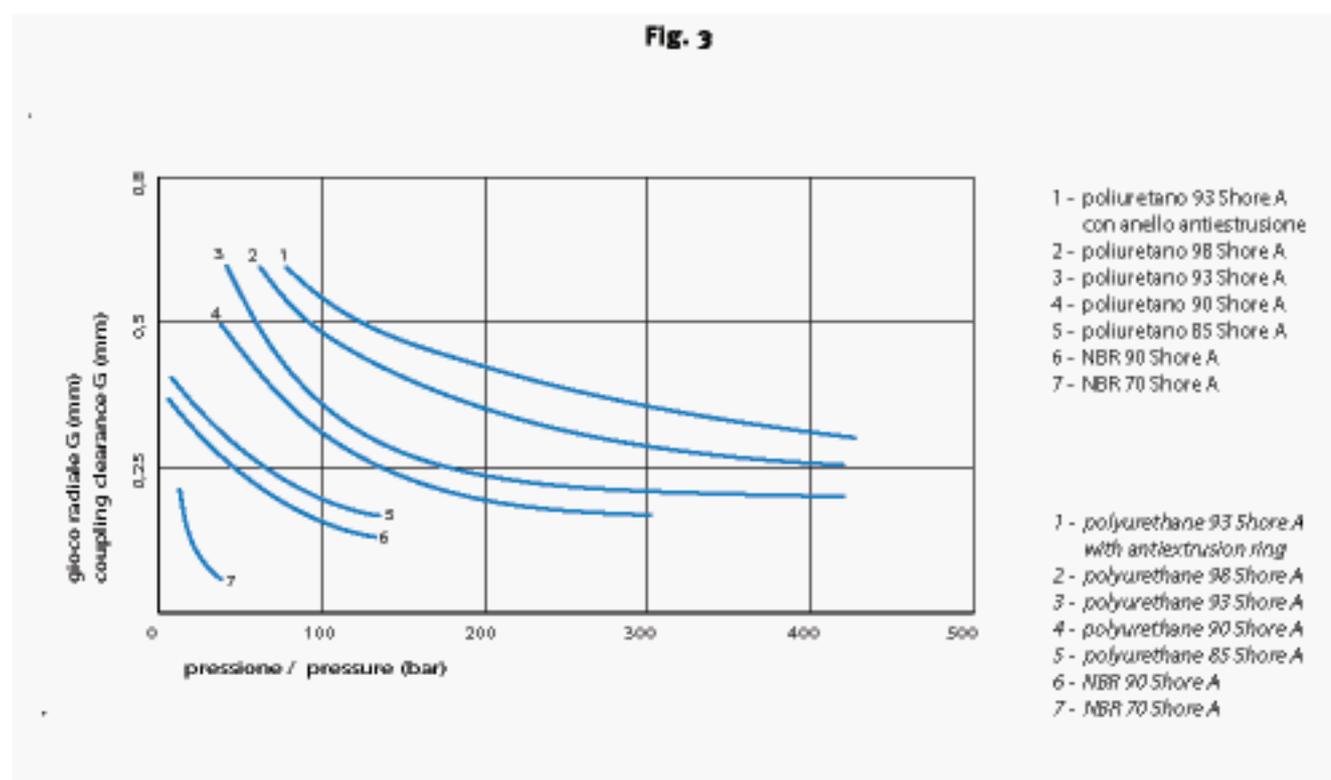

The following table 4 shows the clearance coupling to be considered between rod/head and bore/piston.

The test has been made with oil at the temperature of 60°C on 93 Shore A Polyurethane material.

| Tab. 4 - gioco di accoppiamento / coupling clearance | |

Montaggio

Assembly

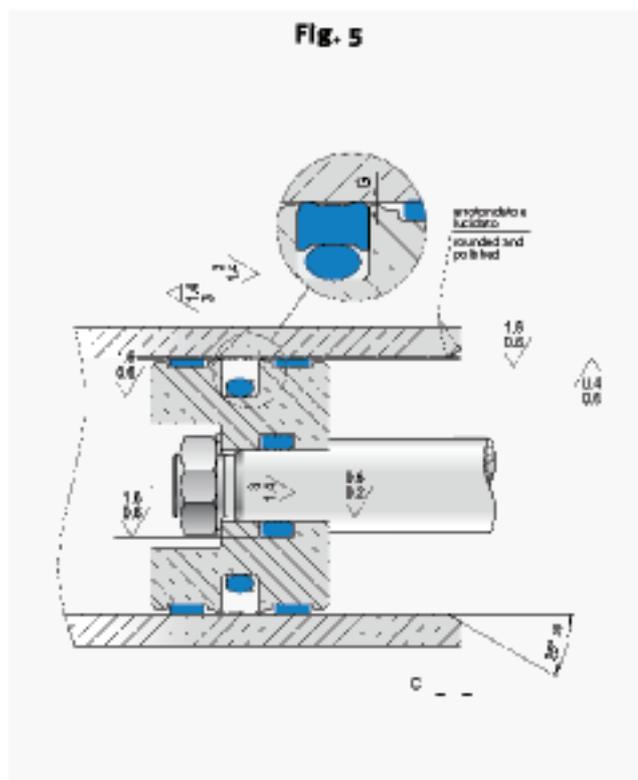

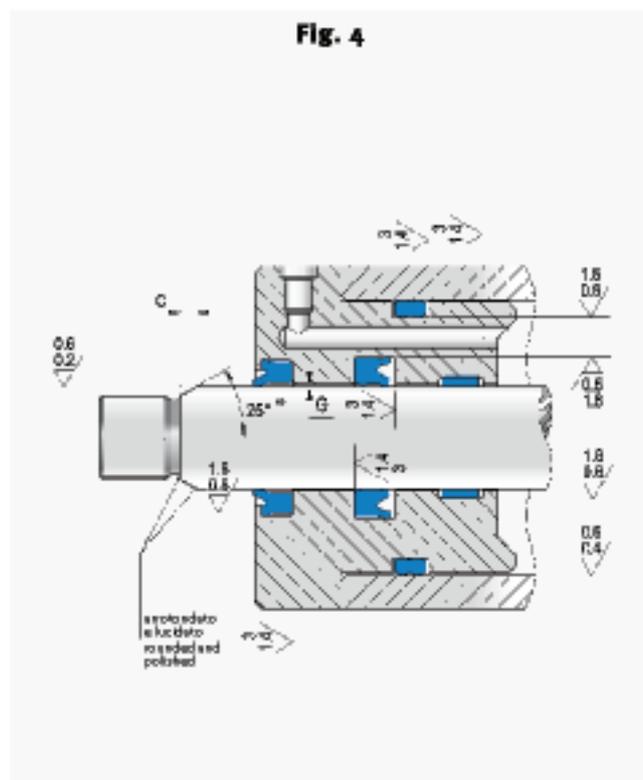

Avvertenze e precauzioni di montaggio nei sistemi oleodinamici

Per un ottimo funzionamento delle guarnizioni occorre che durante il montaggio non vengano tagliate o deformate in modo permanente. Si raccomanda anche di rispettare le norme internazionali ISO sia per quanto riguarda le dimensioni degli alloggiamenti che per le tolleranze. Per le finiture delle superfici, vedere le figure 4 e 5 sotto indicate, che riportano i valori cui attenere. Le finiture di sola rettifica non sono mai consigliate ma si raccomanda un'ulteriore lavorazione di lucidatura prima del montaggio.

Assembling instructions

For a correct sealing functioning it's necessary to avoid cuts or permanent deformations during the assembling process. It's also recommended to follow the ISO norms concerning housings and tolerances. Regarding the surfaces finish, take a look at the following sketches 4 and 5 indicating the values to be respected.

A further polishing operation is usually suggested before mounting, since the only grinding operation isn't recommended.

Montaggio - PTFE Assembling - PTFE

Montaggio PTFE

Le guarnizioni PTFE necessitano di precauzioni estremamente rigorose, maggiori che per tutte le altre tipologie di tenuta. E' fondamentale eliminare gli spigoli vivi e le bave nelle sedi. Il montaggio delle guarnizioni per stelo segue normalmente questa sequenza:

- installare O-Ring nella sede (Fig.6);
- deformare l'anello in PTFE (come in Fig.7) senza creare piegature ad angolo vivo;
- inserire l'anello nella sede cercando di ridargli la formazione iniziale (Fig.8)
- calibrare con utensile conico in materiale Plastico (Fig.9)

Assembling Instructions PTFE

PTFE seals require careful assembling operations in comparison to other types of seals. It is necessary to remove flashes and/or cutting edges in the grooves.

The rod seal is usually assembled in the following sequence:

- fit the O-Ring into the groove (Fig.6);
- twist the PTFE ring (as shown in Fig.7), without causing any open edge curl;
- insert the ring into the groove restoring the original shape (Fig.8)
- calibrate with a plastic conical tool (Fig.9)

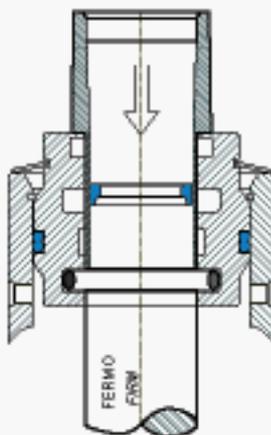

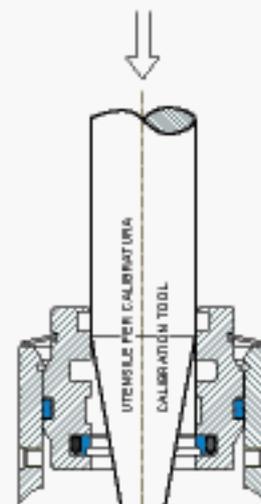

Fig. 9

RSA

TENUTA STELO TIPO RSA

Descrizione

La guarnizione tipo RSA, progettata con labbro dinamico più corto rispetto a quello statico, ha impieghi dove risultano elevati i disallineamenti dello stelo e dove le pressioni possono raggiungere valori elevati.

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: fluidi idraulici a base minerale (vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, basso compression-set ed elevata resistenza all'abrasione.
Ha un durezza di 93 Shore A ± 2.
Codice materiale: C0

Montaggio

Per evitare che la guarnizione si danneggi occorre eliminare le bave e gli spigoli taglienti presentella sede e sullo stelo.
E' sempre consigliato lubrificare la tenuta prima di montaggio per agevolare l'inserimento dello stelo.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

RSA TYPE ROD SEAL

Description

The RSA seal has a dynamic lip shorter than the static one and it is used in cases of high rod misalignments and possible high pressure.

Technical data

Pressure: < 400 bar, at a temperature of 60° C
Speed: < 0,5 m/s
Temperature: from - 35° C to + 100° C, with peaks up to 110° C
Fluids: mineral hydraulic fluids (see table 1, page 12)

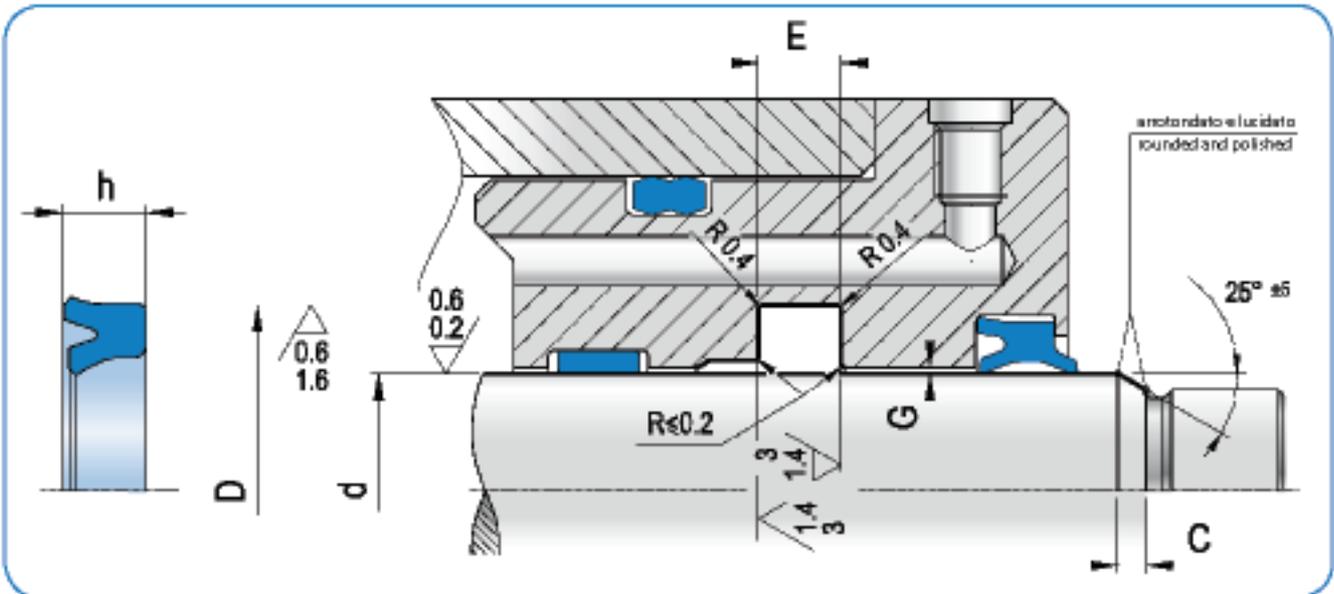

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.
The hardness is 93 Shore A ± 2.
Compound reference: C0

Assembling

To prevent any damage to the seal, remove any flash and cutting edges in the housing and on the rod.
The seal should always be lubricated before assembling in order to have easier insertion of the rod.

For further information please refer to the installation instructions on page 26.

RSB

TENUTA STELO TIPO RSB

Descrizione

La guarnizione tipo RSB è molto simile al tipo RSA, ma presenta sul lato dinamico un doppio labbro che ha più di una funzione:

- attenua eventuali fenomeni di stick-slip grazie al fluido trattenuto nell'intercapedine fra i due labbri;
- evita alle impurità di entrare dall'esterno;
- contrasta il ritiro del materiale alle basse temperature;
- funge da stabilizzatore.

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: fluidi idraulici a base minerale (vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, basso compression-set ed elevata resistenza all'abrasione.

Ha un durezza di 93 Shore A \pm 2.

Codice materiale: C0

Montaggio

Per evitare che la guarnizione si danneggi occorre eliminare le bave e gli spigoli taglienti presenti nella sede e sullo stelo.

E' sempre consigliato lubrificare la tenuta prima di montaggio per agevolare l'inserimento dello stelo.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

RSB TYPE ROD SEAL

Description

The RSB seal type is similar to the RSA type, but on the dynamic side, it presents a multifunctional double lip which:

- reduces stick-slip effects thanks because it keeps oil between the secondary lip and the main one;
- stops any external impurities;
- faces the material shrinkage at low temperatures;
- acts as a stabilizer.

Technical data

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0.5 m/s
Temperature: from - 35° C to + 100° C with peaks up to 110° C
Fluids: mineral hydraulic fluids (see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.

The hardness is 93 Shore A \pm 2.

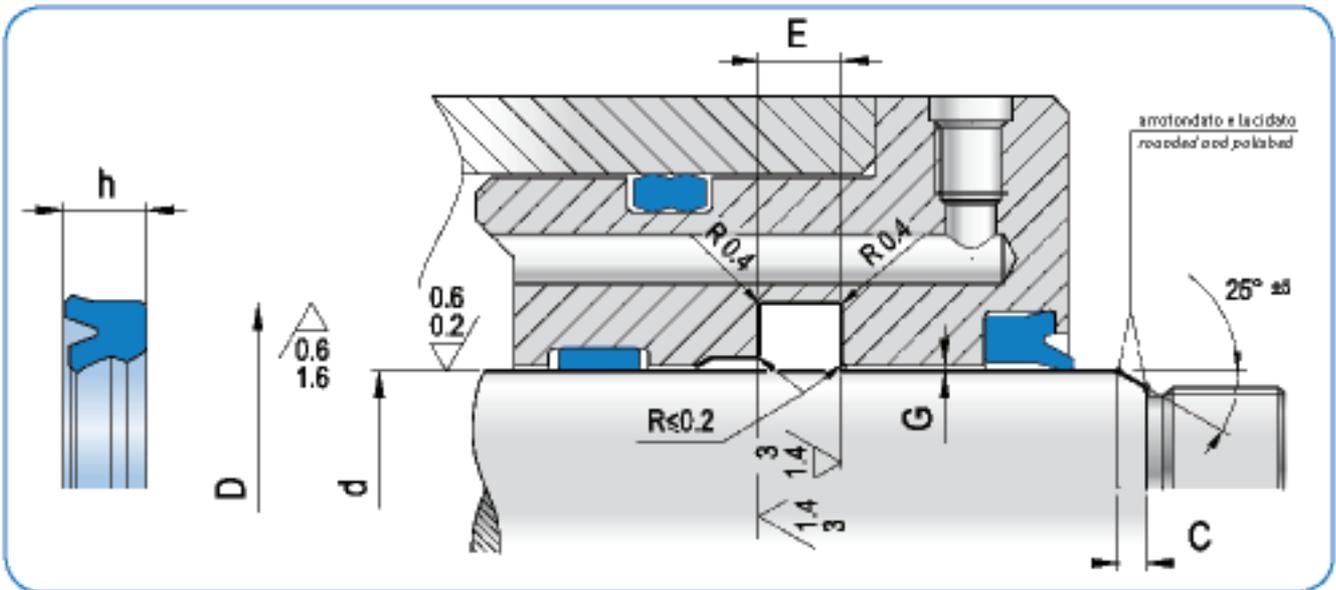

Compound reference: C0

Assembling

To prevent any damage to the seal, remove any flash and cutting edges in the housing and on the rod.

The seal should always be lubricated before assembling in order to have easier insertion of the rod.

For further information please refer to the installation instructions on page 26.

RSB2

TENUTA STELO TIPO RSB2

Descrizione

La tenuta stelo RSB2 è molto simile alla tenuta RSB con l'aggiunta di un anello antiestrusione.

Si utilizza questa tenuta quando non è possibile ridurre i giochi di accoppiamento, tra la testata dello stelo e dove esistono picchi di pressione elevata.

Dati tecnici

| | |
|--------------|---|
| Pressione: | <400 bar con punte a 500 bar alla temperatura di 60°C |
| Velocità: | <0.5 m/s |
| Temperatura: | da -35°C a +100°C con punte fino a +110°C |
| Fluidi : | fluidi idraulici a base minerale (vedi tabella 1 a pagina 12) |

Materiale

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, basso compression-set ed elevata resistenza all'abrasione. Ha una durezza di 93 Shore A \pm 2.

Per l'anello antiestrusione viene proposta una resina poliacetilica (R0) con elevata resistenza al carico di rottura

Codice materiale: CR

Montaggio

Per evitare che la guarnizione si danneggi occorre eliminare le bave e gli spigoli taglienti presenti nella sede e sullo stelo.

E' sempre consigliato lubrificare la tenuta prima di montaggio per agevolare l'inserimento dello stelo.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag 26.

RSB2 TYPE ROD SEAL

Description

The RSB2 seal type is similar to the RSB type with anti-extrusion ring. This seal is recommended when the coupling clearance between the head and the rod cannot be reduced and in the event of high pressure peaks

Technical data

| | |
|--------------|---|
| Pressure: | 400 bar with peaks till 500 bar At 60°C |
| Speed : | < 0.5 [m/s] |
| Temperature: | - 35 °C ÷ +100 °C with peaks till +110°C |
| Fluids : | mineral hydraulic fluids (see table 1, page 12) |

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.

The hardness is 93 Shore A \pm 2.

Compound reference: C0

Assembling

To prevent any damage to the seal, remove any flash and cutting edges in the housing and on the rod.

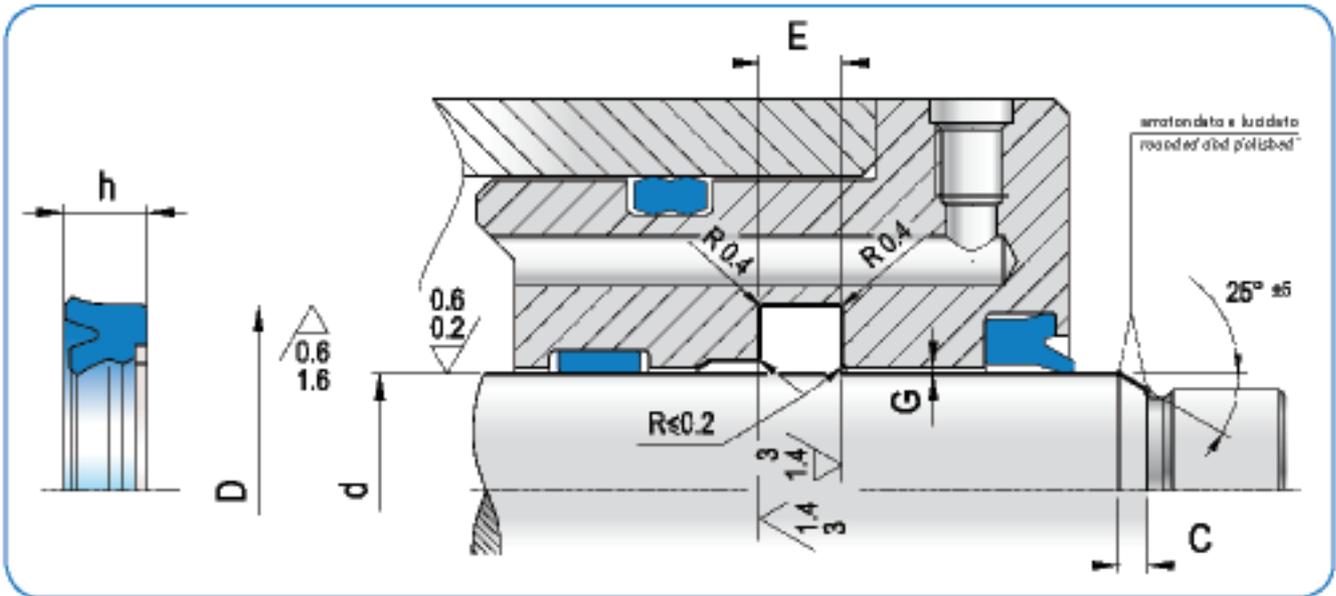

The seal should always be lubricated before assembling in order to have easier insertion of the rod.

For further information please refer to the installation instructions on page 26.

OLEODINAMICA
HYDRAULIC

RSC

TENUTA STELO TIPO RSC

Descrizione

La guarnizione tipo RSC è stata realizzata con ingombri limitati e per quei cilindri dove è possibile avere variazioni di pressione e di velocità elevate. Il profilo è stato progettato con una gola poco profonda per garantire un forte contatto tra le parti statiche e le parti dinamiche anche in assenza di pressione.

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: fluidi e oli minerali
(vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, basso compression-set, alta resistenza all'abrasione.
Ha una durezza di 93 Shore A \pm 2.
Codice materiale: C0

Montaggio

Per evitare che si danneggino le guarnizioni durante il montaggio occorre eliminare le bave e gli spigoli taglienti nella sede e sullo stelo.
E' consigliabile lubrificare la tenuta durante il montaggio per agevolare l'inserimento dello stelo.
Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

RSC TYPE ROD SEAL

Description

The RSC seal has small dimensions and has been developed for cylinders used in presence of pressure variation and high speed.
The profile has been designed with a shallow groove to ensure tight contact between the static and dynamic part, even in zero pressure situations.

Technical data

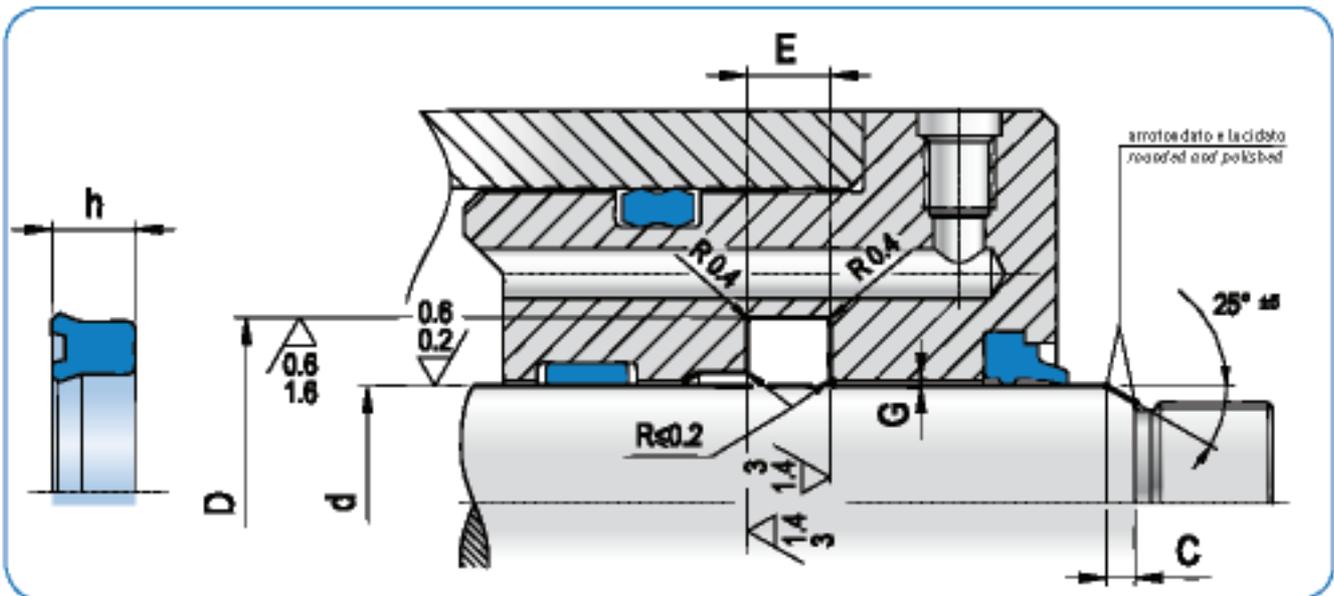

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0,5 m/s
Temperature: from - 35° C to + 100° C, with peaks up to 110° C
Fluids: mineral oils and fluids
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.
The hardness is 93 Shore A \pm 2.
Compound reference: C0

Assembling

To prevent and damage to the seal, remove any flash and cutting edges in the housing and on the rod.
The seal should always be lubricated before assembling in order to have easier insertion of the rod.
For further information please refer to the installation instructions on page 26.

OLEODINAMICA
HYDRAULIC

RSD

TENUTA STELO TIPO RSD

Descrizione

La guarnizione tipo RSD è molto simile al tipo RSC, ma presenta sul lato dinamico un doppio labbro che ha più di una funzione:

- attenua eventuali fenomeni di stick-slip grazie al fluido trattenuto nell'intercapedine fra i due labbri;
- evita alle impurità di entrare dall'esterno;
- contrasta il ritiro del materiale alle basse temperature;
- funge da stabilizzatore;

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: fluidi e oli minerali
(vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, basso compression-set, alta resistenza all'abrasione.

Ha una durezza di 93 Shore A \pm 2.

Codice materiale: C0

Montaggio

Per evitare che si danneggino le guarnizioni durante il montaggio occorre eliminare le bave e gli spigoli taglienti nella sede e sullo stelo.

E' consigliabile lubrificare la tenuta durante il montaggio per agevolare l'inserimento dello stelo.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

RSD TYPE ROD SEAL

Description

The RSD seal type is similar to the RSC type, but on the dynamic side, it presents a multifunctional double lip which:

- reduces stick-slip effects thanks because it keeps oil between the secondary lip and the main one;
- stops any external impurities;
- faces the material shrinkage at low temperatures;
- acts as a stabilizer.

Technical data

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0.5 m/s
Temperature: from - 35° C to + 100° C with peaks till 110° C
Fluids: mineral fluids and oils
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.

The hardness is 93 Shore A \pm 2.

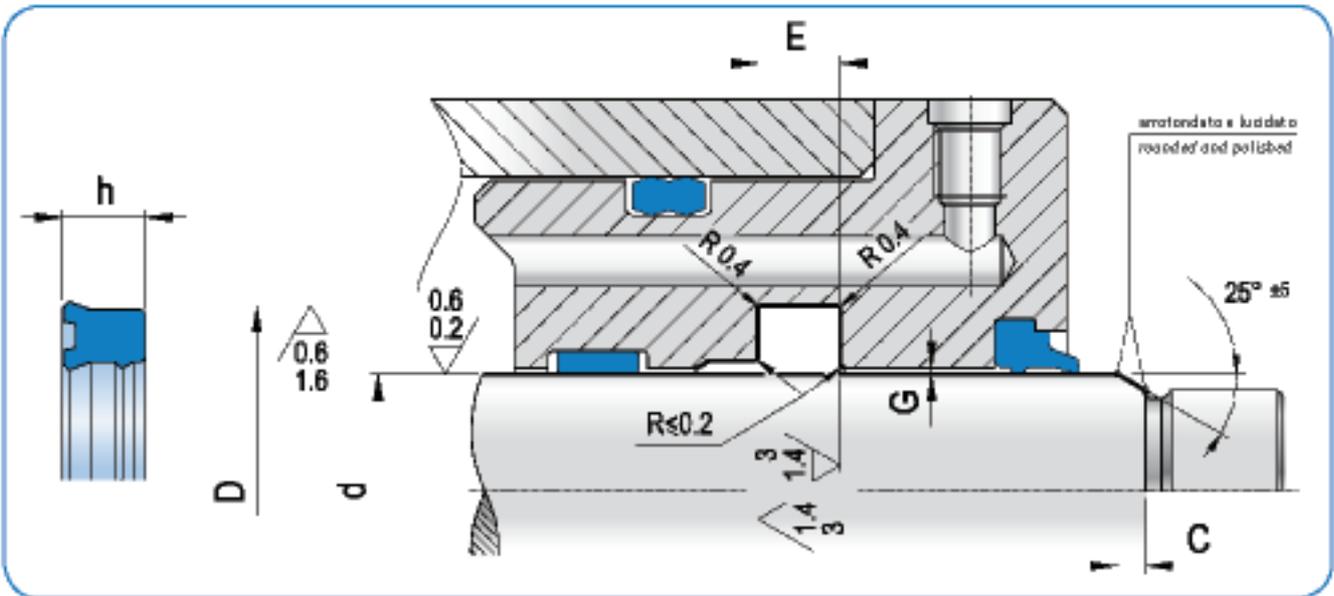

Compound reference: C0

Assembling

To prevent any damage to the seal, remove any flash and cutting edges in the housing and on the rod.

The seal should always be lubricated before assembling in order to have easier insertion of the rod.

For further information please refer to the installation instructions on page 26.

TSS

TENUTA STELO TIPO TSS

Descrizione

La tenuta stelo tipo TSS consta di un anello opportunamente sagomato in PTFE caricato avente funzione di tenuta dinamica e di un anello O-Ring che effettua la tenuta statica e contemporaneamente svolge un effetto energizzante.

Dati Tecnici

Pressione: < 600 bar

Velocità: < 15 m/s

Temperatura: per il tipo standard con OR in nitrile da - 30° C a + 100° C, con punte per periodi brevi fino a 120° C.
Per range di temperature differente occorre sostituire l'O-Ring con un altro tipo più idoneo

Materiale

Per il tipo standard PTFE caricato bronzo ed O-Ring in nitrile.

Codice materiale: TN

Montaggio

Le guarnizioni in PTFE necessitano di precauzioni estremamente rigorose, maggiori che per tutte le altre tipologie di tenuta. E' fondamentale eliminare gli spigoli vivi e le bave nelle sedi. Il montaggio delle guarnizioni per lo stelo segue normalmente questa sequenza:

- Installare O-Ring nella sede;
- Deformare l'anello in PTFE, con l'ausilio di un mandrino e una bussola ad espansione;
- Calibrare con una bussola opportunamente dimensionata (pag. 27 - fig. 9)

TSS TYPE ROD SEAL

Description

The TSS rod seal is composed of two rings. The dynamic seal is a ring in filled PTFE while the static seal is an O-Ring also acting as energizer.

Technical data

Pressure: < 600 bar

Speed: < 15 m/s

Temperature: from - 30° C up to + 100° C for the standard type with nitrile OR. Short peaks till 120° C. For a different temperature range, the O-Ring should be replaced by a more suitable model

Material

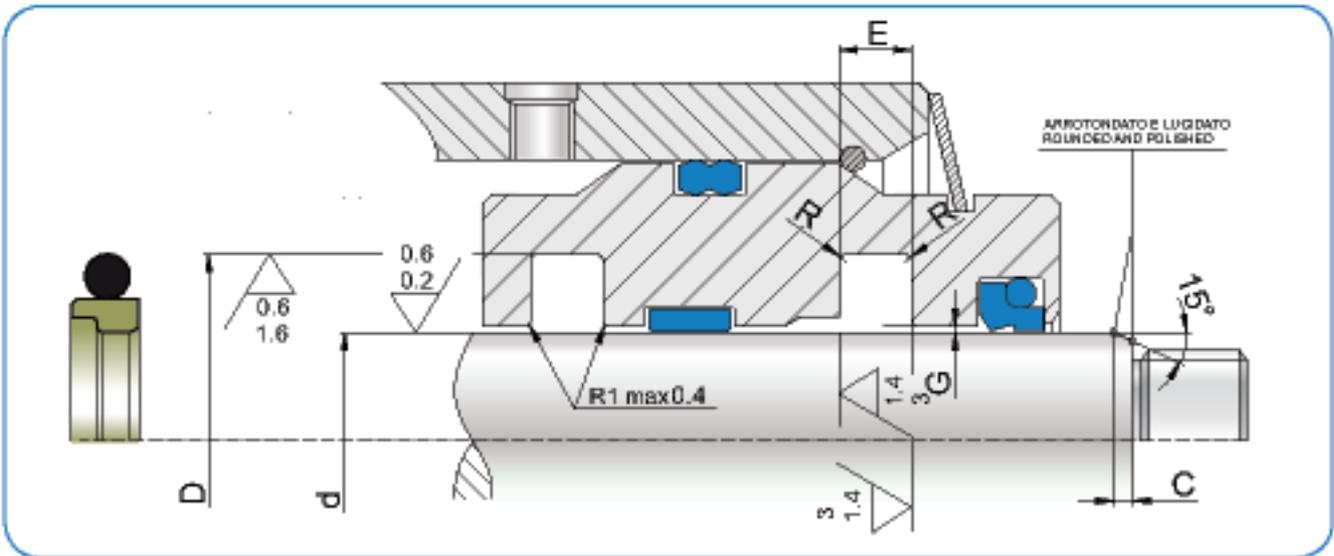

Bronze-filled PTFE for the standard type, and is NB (Nitrile butadiene rubber) O-Ring.

Compound reference: TN

Assembling

PTFE seals require careful assembling operations in comparison to other types of seals. It is necessary to remove flashes and/or cutting edges in the grooves. The rod seal is usually assembled in the following sequence:

- fit the O-Ring into the groove
- twist the PTFE ring using a mandrel and a expansion bush;
- calibrate with a plastic conical tool (Page 27 Fig.9)

RSO

TENUTA STELO TIPO RSO

Descrizione

La tenuta tipo RSO è stata sviluppata per sostituire o per lavorare in tandem con guarnizioni a gradino in PTFE, avendo le stesse dimensioni di sede.

Presenta al suo interno una gola arrotondata dove può essere alloggiato ed inserito un o-ring che ha funzione di energizzare i labbri di tenuta dinamica statico anche in assenza di pressione.

Questo profilo può essere utilizzato anche a bassissima velocità e pressione con risultati eccellenti per il basso attrito sviluppato.

Ha dei ridotti ingombri assiali e quindi lavorazioni di sede semplici.

Dati tecnici

Pressione: < 250 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto per la tenuta è il poliuretano tipo C0 ad alto modulo elastico (standard 93 Sh A), basso compression-set ed elevata resistenza all'abrasione energizzato da un o-ring in NBR 70 (N0).

Codice materiale: CN (*)

Montaggio

Come per tutte le sedi dove alloggia la guarnizione occorre eliminare le bave e gli spigoli taglienti.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

RSO TYPE ROD SEAL

Description

The RSO seal type has been developed to replace or work jointly with stepseals in PTFE, because of the same groove dimension.

Internally it has a round groove where an O-ring can be inserted and housed. The O-Ring acts as energizer for the static and dynamic sealing lips even without pressure.

This profile has also excellent results at very low speed and pressure, because of the low friction. The machining of the groove is easier thanks to the reduced axial dimension.

Technical data

Pressure: < 250 bar at a temperature of 60° C
Speed: < 0,5 m/s
Temperature: from - 35° C to + 100° C, with peaks up to 110° C
Fluids: mineral oils (see TABLE I, pages 12-13)
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.

The hardness is 93 Shore A \pm 2, energized with O-ring in NBR 70 (N0).

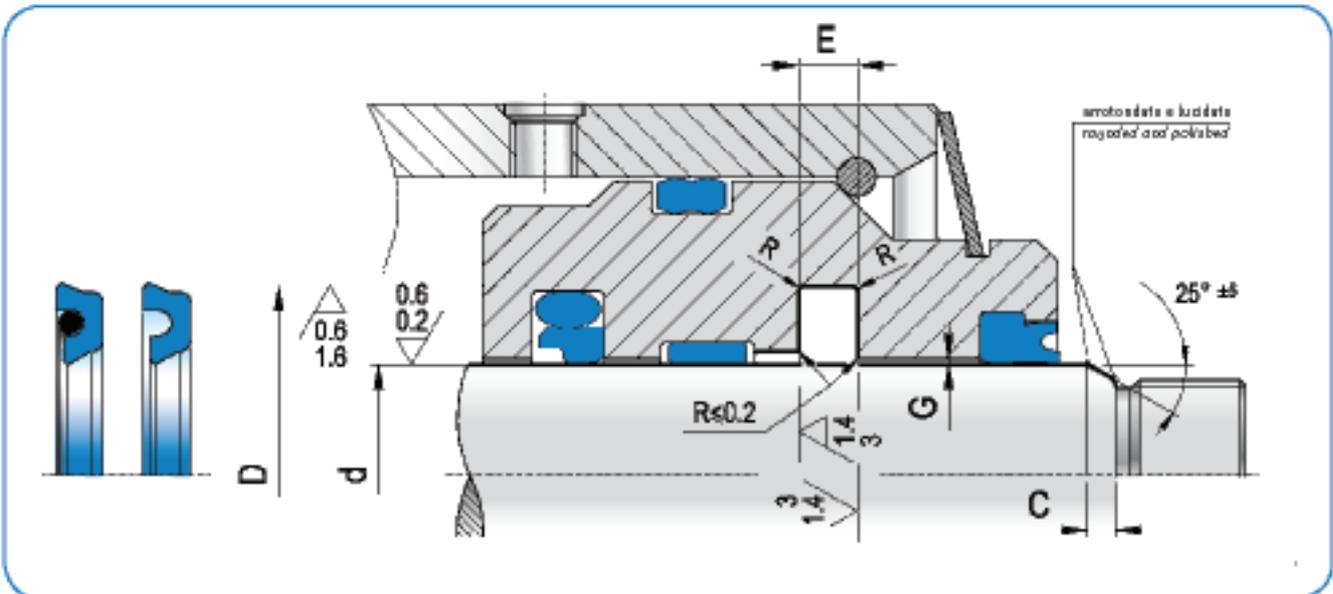

Compound reference: CN (*)

Assembling

As for all seal housings, remove any flash or cutting edges.

For further information please refer to the installation instructions on page 26.

(1) = per RSO con sezione 3,75 mm non viene fornito con o-ring – for cross section 3.75mm RSO is supplied without o-ring

(2) = si consiglia la sede aperta per facilitare montaggio – open groove housing is recommended for easier installation

RBR

BUFFER RING TIPO RBR

Descrizione

L'anello RBR, avente funzione di buffer ring, è stato appositamente progettato come guarnizione primaria per lavorare esclusivamente in tandem con tenute a labbri asimmetrici (vedi RSA, pag 30). La sua funzione è quella di permettere alla tenuta secondaria di lavorare comunque in pressione. Non effettuando una tenuta assoluta tra le due guarnizioni si crea una camera d'olio con pressione crescente che, grazie al particolare profilo dell'anello RBR, raggiunto un certo valore, viene "liberata" all'interno del cilindro. Il tutto funziona come una valvola di massima. Inoltre svolge il compito di contrastare i picchi di pressione.

Dati tecnici

Pressione: < 400 bar a temperature di 60° C
Velocità: < 0.8 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: oli minerali HL e HLP
(vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto è il poliuretano tipo C0 a 93 Shore A con buona resistenza all'abrasione, ottimo compression-set, elevato modulo elastico necessario per la tenuta. Per l'anello antiestrusione viene proposta una resina poliacetilica (R0) con elevata resistenza al carico di rottura.
Codice materiale: CR

Montaggio

Il montaggio avviene in cava chiusa. E' pertanto necessario montare prima la guarnizione in poliuretano poi l'anello antiestrusione.

RBR TYPE BUFFER RING

Description

The RBR ring, working as buffer ring, has been specially designed to work as main seal, to be used in combination with asymmetrical lip seals (see RSA page 30). Its function is to maintain working pressure for the second seal. It does not provide full sealing effect so an oil chamber will thus form between the two seals. Thanks to the special profile of the RBR ring, the growing pressure in the space will be released into the cylinder once a certain value is achieved. It works as a valve. It has been also designed to compensate pressure peaks.

Technical data

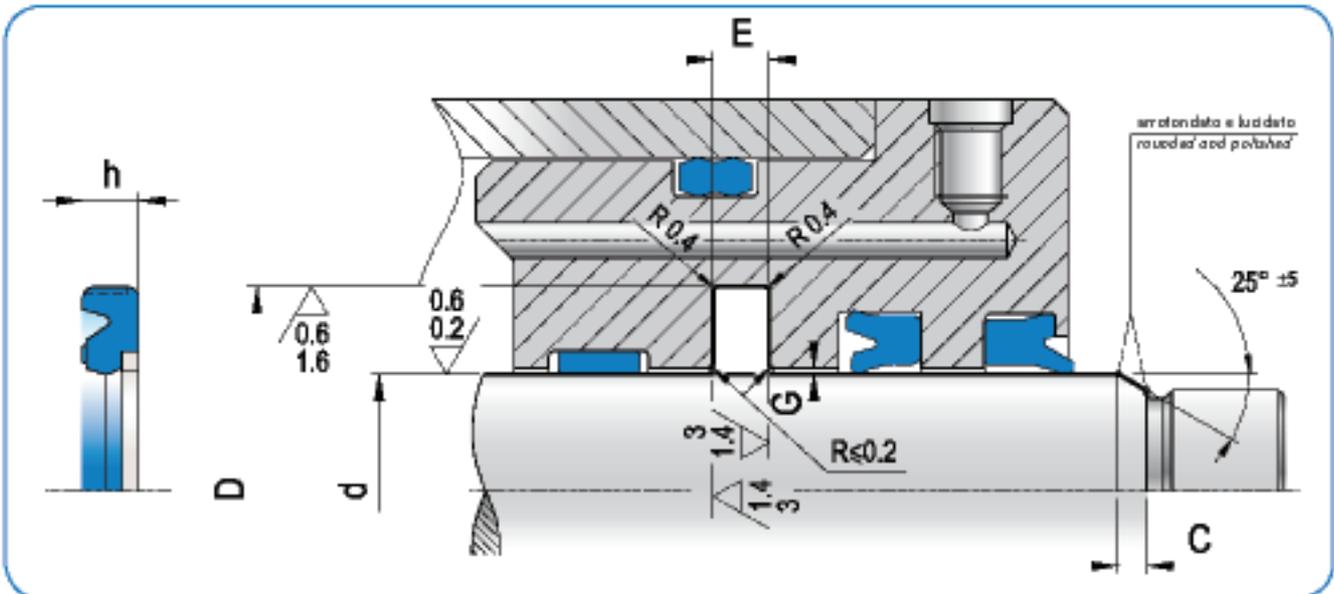

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0.8 m/s
Temperature: from - 35° C to + 100° C with peaks till 110° C
Fluids: HL and HLP mineral oil
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, fundamental for the sealing, low compression-set and high abrasion resistance. The hardness is 93 Shore A \pm 2. For the anti-extrusion ring we propose a polyacetal resin (R0) with high tensile strength. Compound reference: CR

Assembling

The assembling is done in closed groove. The polyurethane seal must therefore be fitted before the anti-extrusion ring.

Nota: altre dimensioni non a catalogo a richiesta. Consultare il nostro ufficio tecnico.

Remark: please contact our technical dept. for further dimensions not included in the catalogue.

RPS

TENUTA STELO / PISTONE TIPO RPS

Descrizione

La guarnizione tipo RPS permette, grazie al suo profilo, due differenti montaggi ed applicazioni. Avendo due labbri simmetrici può essere utilizzata sia per tenuta su stelo che per tenuta su pistone e per cilindri che lavorano a semplice o a doppio effetto. Il profilo a labbri uguali e la profondità della gola garantiscono una ridotta frizione e un movimento lineare anche a bassa pressione.

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: oli idraulici minerali
(vedi tabella 1 a pagina 12)

Materiali

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, basso compression-set e buona resistenza all'abrasione.
Ha una durezza di 93 Shore A \pm 2.
Codice materiale: C0

Montaggio

Il montaggio è facilitato dall'alto modulo elastico del poliuretano.
E' consigliato ingrassare la guarnizione prima del montaggio, e togliere spigoli e bave che danneggerebbero la tenuta.

RPS TYPE ROD/PISTON SEAL

Description

The RPS seal type combines in one solution two different installations and applications. With two symmetrical lips, it can be used both for rod and piston sealing applications and for cylinders working with simple or double effect. The profile with equal lips and the deep groove ensures low friction and a linear movement even at low pressure.

Technical data

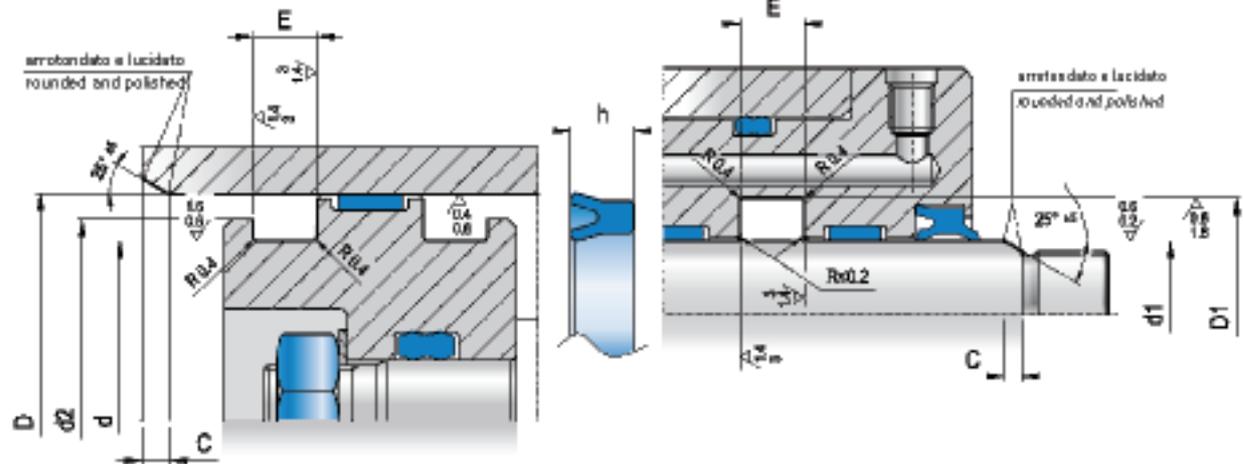

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0,5 m/s
Temperature: from - 35° C to + 100° C, with peaks up to + 110° C
Fluids: mineral hydraulic oils
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, fundamental for the sealing, low compression-set and high abrasion resistance.
The hardness is 93 Shore A \pm 2.
Compound reference: C0

Assembling

The high modulus of elasticity of the polyurethane helps the assembling.
It is recommended to lubricate the seals before installation and to eliminate any edges or flash which could damage the seal.

OLEODINAMICA
HYDRAULIC

Per diametri superiori a 200mm sono disponibili le tenute tipo MAD e tipo CSC della Macma.

Seals type MAD and type CSC, produced by Macma, are available for diameters bigger than 200 mm.

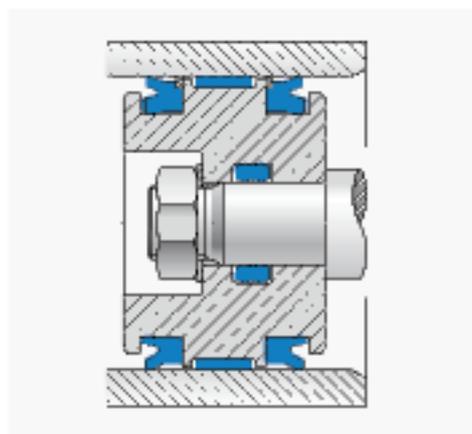

* In conformità alle norme ISO/DIN 5597 e ISO 5597/1 – In accordance with ISO/DIN 5597 and ISO 5597/1 norms

** diametro di aggancio consigliato ma modificabile in funzione delle esigenze di montaggio – hook diameter which could be modified according to mounting demand

Montaggio - PTFE

Assembling - PTFE

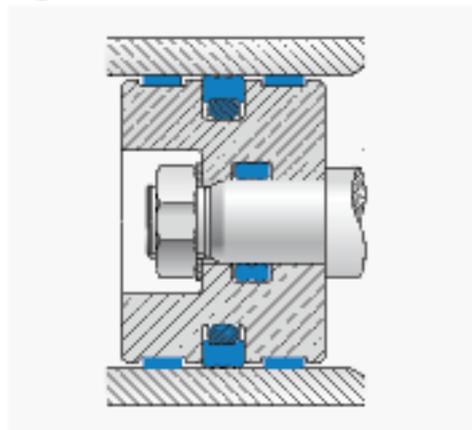

Fig. 10

Due guarnizioni contrapposte tipo PAE con anello antilestrusione con interposto un anello di guida tipo HES. Entrambi i tipi di tenuta sono costruiti con tacche di sfogo sul dorso, dal lato esterno, necessarie affinché non si crei una pressione residua tra le due guarnizioni, di valore crescente che nel medio/lungo termine potrebbe espellerne una dalla sede.

Two opposed PAE-type seals with anti-extrusion ring and an HES wear ring in between. Both seal types have been developed with notches on the external side to prevent residual pressure between the two seals. Pressure would keep rising and in mid / long-term could cause seal extrusion.

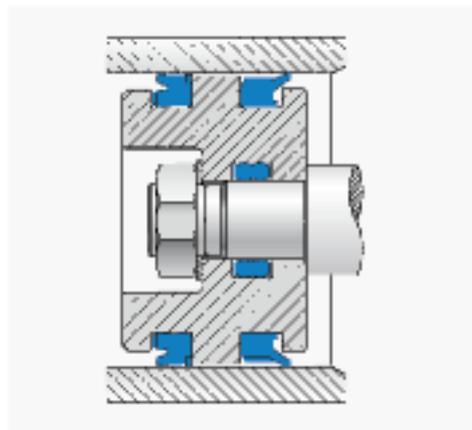

Fig. 11

Montaggio semplice, ma molto efficace di una guarnizione tipo PSO con anello di tenuta in poliuretano in accoppiamento a due anelli di guida tipo HES. In alternativa per alte pressioni e giochi di accoppiamento elevati utilizzare tenute in PTFE.

Easy assembling of a PSO seal type, with polyurethane sealing ring combined to two HES wear rings. As alternative for high pressures and high clearance, PTFE seals can be used.

Fig. 12

Impiego di guarnizione tipo PAE provvista di anello antilestrusione ed anello raschiatore tipo WEL. Quest'ultimo è consigliato in tutti i cilindri a semplice effetto dove è facile che sul lato asciutto della canna si formi condensa o si depositino particelle metalliche di lavorazione, entrambi agenti di deterioramento della tenuta.

Use of PAE seals with anti-extrusion ring and WEL type wiper ring. This last one is suggested for all simple effect cylinders where condensation can form or tooling metal particles can accumulate on the dry side of the tube, thus damaging the seal.

MONTAGGIO TENUTA PISTONE - PTFE

Le guarnizioni PTFE necessitano di precauzioni estremamente rigorose, maggiori che per tutte le altre tipologie di tenuta. E' fondamentale eliminare gli spigoli vivi e le bave nelle sedi. Il montaggio delle guarnizioni per stelo segue normalmente questa sequenza:

- Installare O-Ring nella sede;
- Spingere dilatando l'anello in PTFE, con l'ausilio di un mandrino ed una bussola ad espansione (Fig.13);
- Calibrare con una bussola opportunamente dimensionata (Fig.14)

ASSEMBLING OF PISTON SEAL - PTFE

PTFE seals require careful assembling operations in comparison to other types of seals. It is necessary to remove flashes and/or cutting edges in the grooves. The rod seal is usually assembled in the following Sequence:

- *fit the O-Ring into the groove*
- *twist the PTFE ring using a mandrel and an expansion bush (Fig.13);*
- *calibrate with a bush with right dimension (Fig.14)*

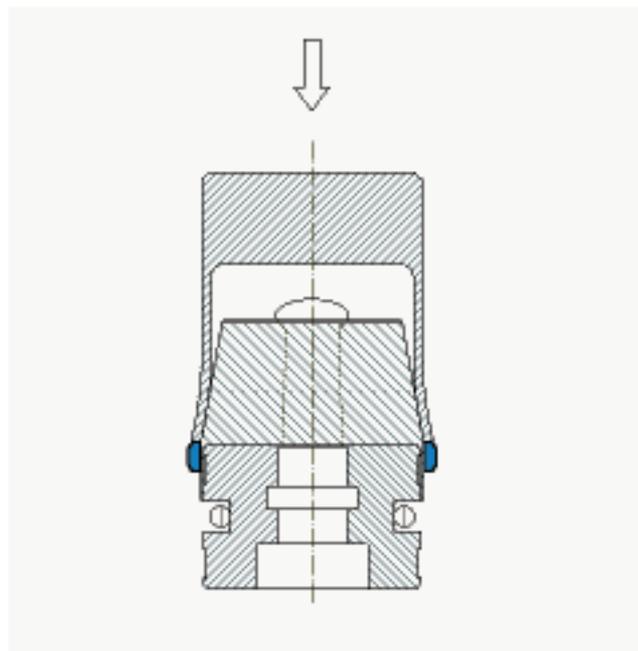

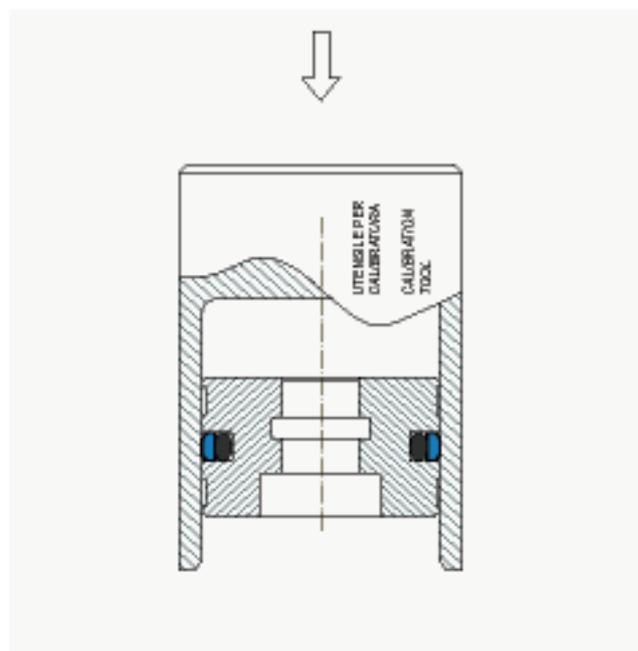

Fig. 14

PSA

TENUTA PISTONE TIPO PSA

Descrizione

La guarnizione tipo PSA è stata realizzata per impieghi su pistone e può essere utilizzata sia per il semplice che per il doppio effetto.

Ha labbri asimmetrici che assicurano sempre il contatto con la camicia anche con dei disallineamenti elevati.

Il montaggio avviene in cava semiaperta per accavallamento, avendo il materiale un alto modulo elastico.

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0.5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a 110° C
Fluidi: oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, basso compression-set ed alta resistenza all'usura.

Ha una durezza di 93 Shore A \pm 2.

Codice materiale: C0

Montaggio

Eliminare tutti gli spigoli vivi e le bave sul pistone dove alloggia la guarnizione.

Eseguire uno smusso di invito sulla camicia per facilitare l'inserimento del pistone.

Lubrificare la tenuta prima del montaggio.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

PSA TYPE PISTON SEAL

Description

The PSA seal type has been conceived to work on the piston and it can be used for simple or double effect. It has asymmetrical lips which ensure a continuous contact with the bore, even in case of high misalignments.

The installation is done in semi-open groove by overlapping, since the material has a high modulus of elasticity.

Technical data

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0.5 m/s
Temperature: from - 35° C to + 100° C, with peaks up to 110° C
Fluids: mineral-based oils and fuels
(see table 1, page 12)

Material

The material used is a polyurethane with a high modulus of elasticity, low compression set and high wear resistance.

Its hardness is 93 Shore A \pm 2.

Compound reference: C0

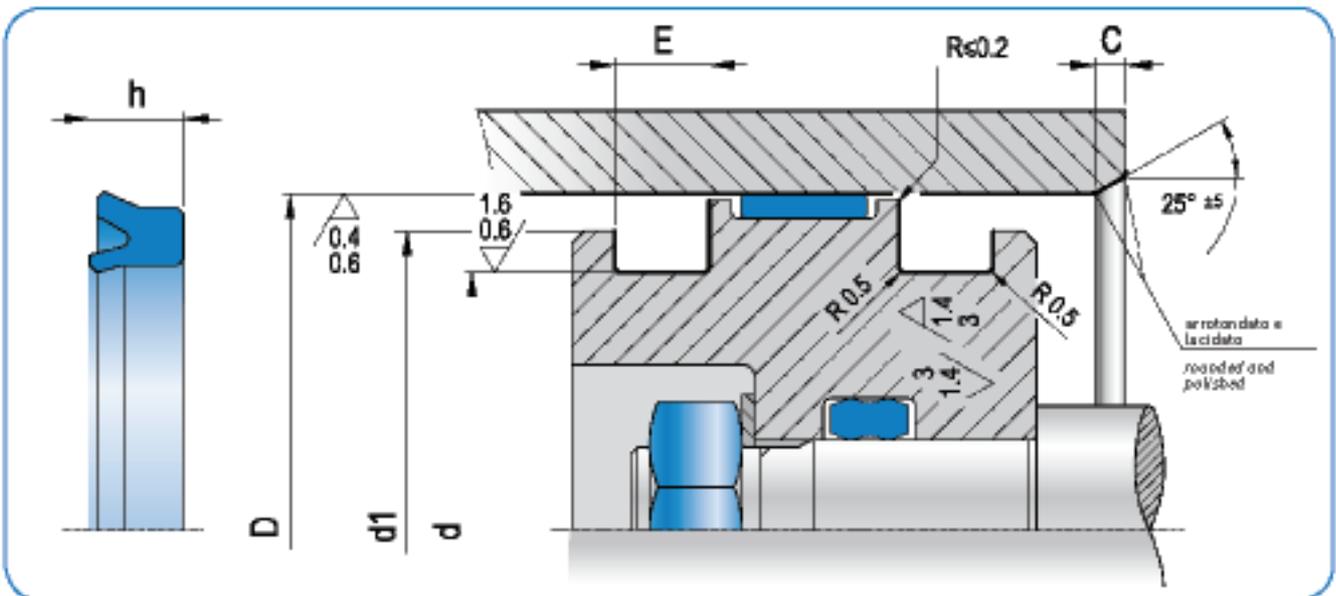

Assembling

Remove any flash or cutting edges on the piston where the seal is housed.

Provide a lead-in chamfer in the bore to have an easier piston insertion.

Lubricate the packing before installation.

For further information please refer to the installation instructions on page 26.

PAE

TENUTA PISTONE CON ANELLO ANTIESTRUSIONE TIPO PAE

Descrizione

La guarnizione tipo PAE è stata realizzata specificatamente per operare in condizioni di esercizio molto gravose.

Quando i giochi di accoppiamento tra camicia e pistone non possono essere ridotti e la pressione è molto elevata, superiore a 250 bar, la tenuta tipo PAE, grazie ad un robusto anello antiestrusione, risulta tra le più appropriate.

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a +100° C con punte fino a 110° C
Fluidi: Oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

I materiali utilizzati sono un poliuretano tipo CQ 93 Shore A ad alto modulo elastico per la guarnizione e una resina acetica tipo R0 rinforzata con fibre di vetro con elevata resistenza al carico di rottura per l'anello antiestrusione.

Codice materiale: CR

Montaggio

Il montaggio di questa guarnizione avviene in cava semiaperta.

La sequenza prevede prima la tenuta e poi l'anello antiestrusione.

È importante togliere le bave e gli spigoli vivi dal pistone per non danneggiare la guarnizione durante il montaggio nella fase di accavallamento.

PAE TYPE PISTON SEAL WITH ANTIEXTRUSION RING

Description

The PAE seal type is specially designed for heavy duty applications.

When the coupling clearance between bore and piston cannot be reduced and the pressure is very high - above 250 bar - the PAE seal type, thanks to a strong anti-extrusion ring, is among the most appropriate of seal types.

Technical data

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0.5 m/s
Temperature: from - 35° C till +100° C
Fluids: mineral oils
(see table 1, page 12)

Material

The material used for the seal is polyurethane CQ-type at 93 Shore A with high elasticity module. The anti-extrusion ring is made of acetylic resin R0-type reinforced with fibreglass and with high tensile strength.

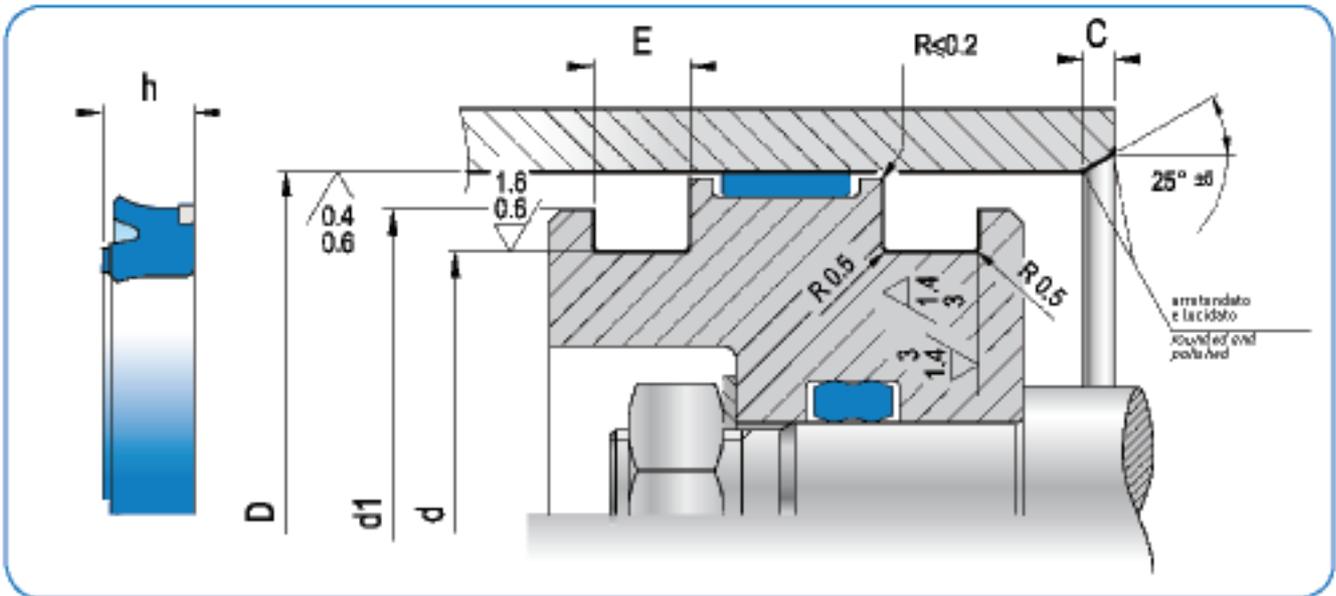

Compound reference: CR

Assembling

The assembling of this seal is done in semi-open groove.

The anti-extrusion ring should be installed after the seal.

It is important to remove any flash or cutting edges on the piston not to damage the seal during the overlapping.

PSH+RR

TENUTA PISTONE CON ANELLO GUIDA E RITEGNO TIPO PSH + RR

Descrizione

La guarnizione per pistone tipo PSH è simile al tipo PSA, ma è provvista di un anello di guida in resina acetilica che oltre ad attenuare eventuali disallineamenti funge anche da antiestrusione. Un anello di ritegno tipo RR in resina termoplastica non consente l'espulsione della tenuta durante l'inversione del ciclo.

Dati tecnici

Pressione: < 400 bar a temperatura di 60° C
Velocità: < 0,5 m/s
Temperatura: da - 35° C a + 100° C con punte fino a +110° C
Fluidi: fluidi e oli a base minerale (vedi tabella 1 a pagina 12)

Materiale

Il materiale proposto è il poliuretano tipo C0 ad alto modulo elastico, a basso compression-set ed elevata resistenza all'abrasione; l'anello di guida è in resina acetilica tipo R0 rinforzata con fibre di vetro.

Codice materiale PSH: CR

L'anello di ritegno è costruito in resina termoplastica tipo R2.

Codice materiale RR: R2

Montaggio

Eliminare tutti gli spigoli vivi e le bave sul pistone dove alloggia la guarnizione.

Eseguire uno smusso di invito sulla camicia per facilitare l'inserimento del pistone.

Lubrificare la tenuta prima del montaggio.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

PSH+RR TYPE PISTON SEAL WITH WEAR AND RETAINING RING

Description

The PSH piston seal type is similar to the PSA type but it has an acetylic resin wear ring to mitigate possible misalignments and avoid extrusion. A RR retaining ring made of thermoplastic resin prevents seal extrusion during the cycle inversion.

Technical data

Pressure: < 400 bar at a temperature of 60° C
Speed: < 0,5 m/s
Temperature: from - 35° C to + 100° C with peaks till +110° C
Fluids: mineral fluids and oils (see table 1, page 12)

Material

The proposed material is a C0-type polyurethane with high modulus of elasticity, low compression set and high abrasion resistance. The wear ring is made of a R0-type acetylic resin reinforced with fibreglass.

Compound reference PSH: CR

The retaining seal is made of thermoplastic resin R2 type.

Compound reference RR: R2

Assembling

Avoid all cutting edges and flash on the piston where the seal is housed.

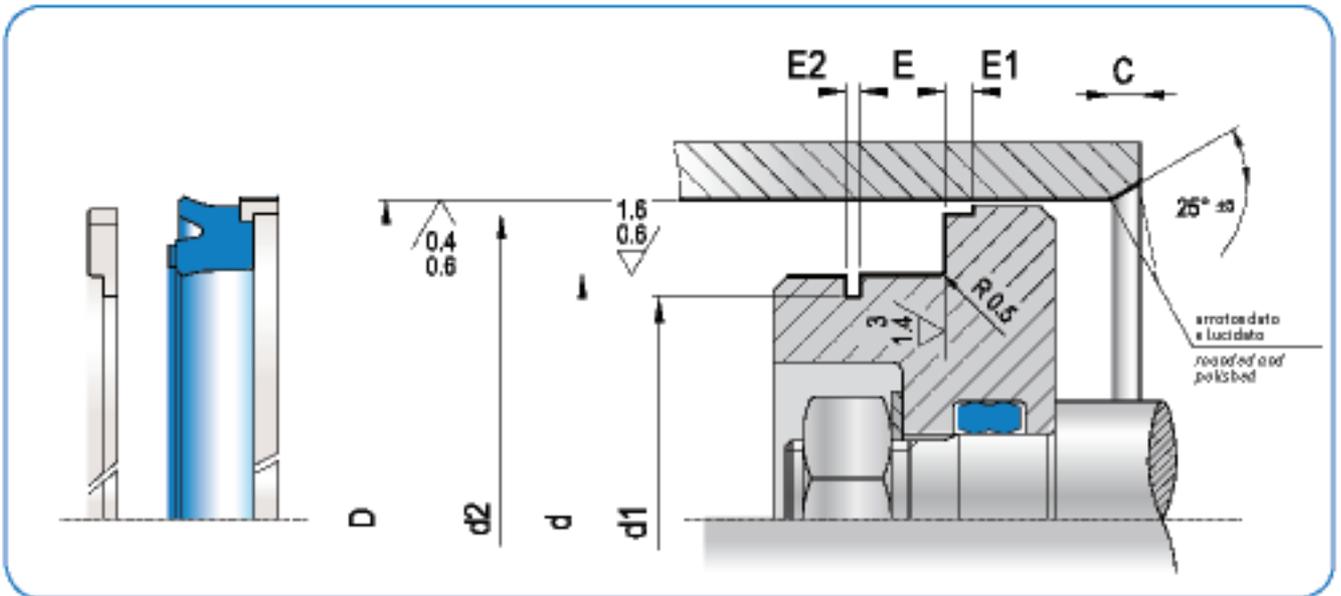

A lead-in chamfer in the groove will facilitate the piston insertion.

Lubricate the seal before installation.

For further information please refer to the installation instructions on page 26.

OLEODINAMICA
HYDRAULIC

PSO

TENUTA PISTONE TIPO PSO

Descrizione

La guarnizione tipo PSO ha un profilo con doppie punte sulla parte dinamica e un piano con due piccoli gradini di contenimento sulla parte statica dove trova alloggio l'o-ring.

La presenza dell'o-ring, che energizza la guarnizione, garantisce la perfetta tenuta sia a basse che ad alte pressioni.

Lo speciale profilo a doppie punte evita pressioni idrodinamiche sulla tenuta e di conseguenza l'effetto blow-by.

Dati tecnici

| | |
|--------------|---|
| Pressione: | < 250 bar con materiale standard 93 Sh A a 60° C (C0) |
| Pressione: | < 400 bar con materiale alternativo 98 Sh A a 60° C (D0) |
| Pressione: | < 500 bar con materiale alternativo 55 Sh D a 60° C (E0) |
| Velocità: | < 0,5 m/s |
| Temperatura: | da - 35° C a + 100° C con punte fino a 110° C |
| Fluidi: | fluidi a base minerale (vedi tabella 1 a pagina 12) |

Materiale

I materiali utilizzati sono dei poliuretani con differenti durezza a seconda delle pressioni di esercizio (C0 o D0 o E0).

L'o-ring in NBR è di durezza 70 Shore A. (N0).

Codice materiale: CN (o in alternativa, DN o EN).

Montaggio

È necessario eliminare spigoli taglienti e bave nella sede dove alloggia la guarnizione.

Eseguire smusso di invito sulla camicia per facilitare il montaggio del pistone.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

PSO TYPE PISTON SEAL

Description

The PSO seal type shows a double profile on the dynamic side and a surface with two small steps on the static side, where the o-ring is housed.

The presence of the o-ring, which energizes the seal ensures a perfect seal performance at low and high pressure.

The special double profile avoids any hydro-dynamic pressure on the sealing part and the consequent blow-by effect.

Technical data

| | |
|--------------|---|
| Pressure: | < 250 bar with standard material 93 Sh A at 60° C (C0) |
| Pressure: | < 400 bar with alternative material 98 Sh A at 60° C (D0) |
| Pressure: | < 500 bar with alternative material 55 Sh D at 60° C (E0) |
| Speed: | < 0.5 m/s |
| Temperature: | from - 35° C to + 100° C, with peaks at 110° C |
| Fluids: | mineral-based fluids (see table 1, page 12) |

Material

The chosen material is polyurethane, with hardness according to the working pressure (C0 o D0 o E0).

The o-ring is in NBR hardness is of 70 Shore A (N0)

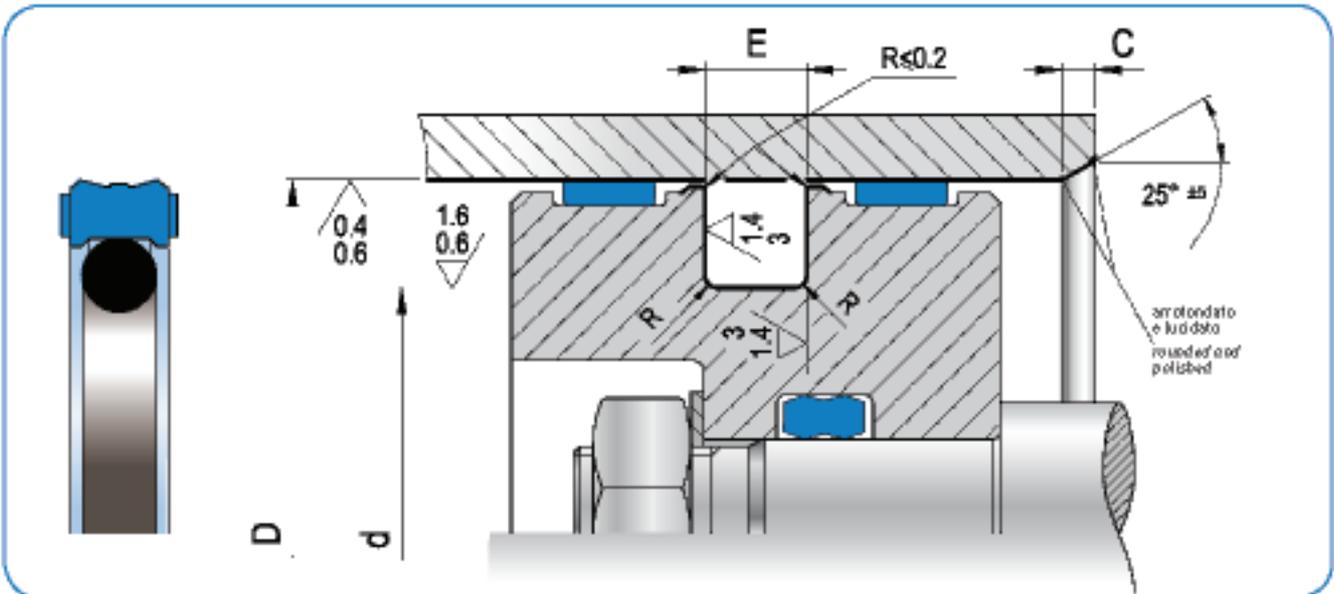

Compound reference: CN (or, in alternative, DN or EN).

Assembling

Remove any cutting edges and flash in the housing of the seal.

Ensure a lead-in chamfer in the bore to facilitate the piston installation.

For further information please refer to the installation instructions page 26.

PSQ

TENUTA PISTONE TIPO PSQ

Descrizione

La guarnizione PSQ ha un profilo con doppie punte al centro nella parte dinamica ed un piano con due piccoli gradini nella parte statica dove alloggiati il Q-ring.

La presenza del Q-ring energizza la guarnizione e garantisce la perfetta tenuta sia a bassa che ad alta pressione.

La geometria del profilo a doppie punte centrali evita pressioni idrodinamiche sulla tenuta e di conseguenza l'effetto blow-by.

Dati tecnici

Pressione: < 250 Bar con materiale tipo C0 a 93 Shore A a temperatura di 60° C.
< 400 Bar con materiale tipo D0 a 98 Shore A a temperatura di 60° C.

Velocità: < 0,8 m/s

Temperatura: da - 35° C a + 100 ° C
con punte fino a 110° C.

Fluidi: oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

I materiali della tenuta sono poliuretani di diverse durezza a seconda delle pressioni di esercizio.
Codice materiale: CQ (93 Shore A con Q-ring) o, in alternativa, DQ (98 Shore A con Q-ring)

Montaggio

E' necessario eliminare gli spigoli taglienti e le bavure nella sede dove alloggia la guarnizione.

Eseguire smusso d'invito sulla camicia per facilitare il montaggio del pistone.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag 26.

PSQ TYPE PISTON SEAL

Description

The PSQ seal has a double profile in the dynamic part, and two small steps in the static part where the Q-ring is housed.

The Q-ring energizes the seal and provides a perfect sealing performance at low and high pressure.

The shape of the central double profile prevents hydrodynamic pressures on the seal and the resulting blow-out effect.

Technical data

Pressure: < 250 Bar with a C0-type material at 93 Shore A, at a temperature of 60° C.
< 400 Bar a D0-type material, at 98 Shore A, at a temperature of 60° C.

Speed: < 0.8 m/s

Temperature: from - 35° C to + 100 ° C with peaks up to 110° C.

Fluids: mineral oils
(see table 1, page 12)

Material

The sealing parts are in polyurethanes with different hardness, according to the specific operating pressures.

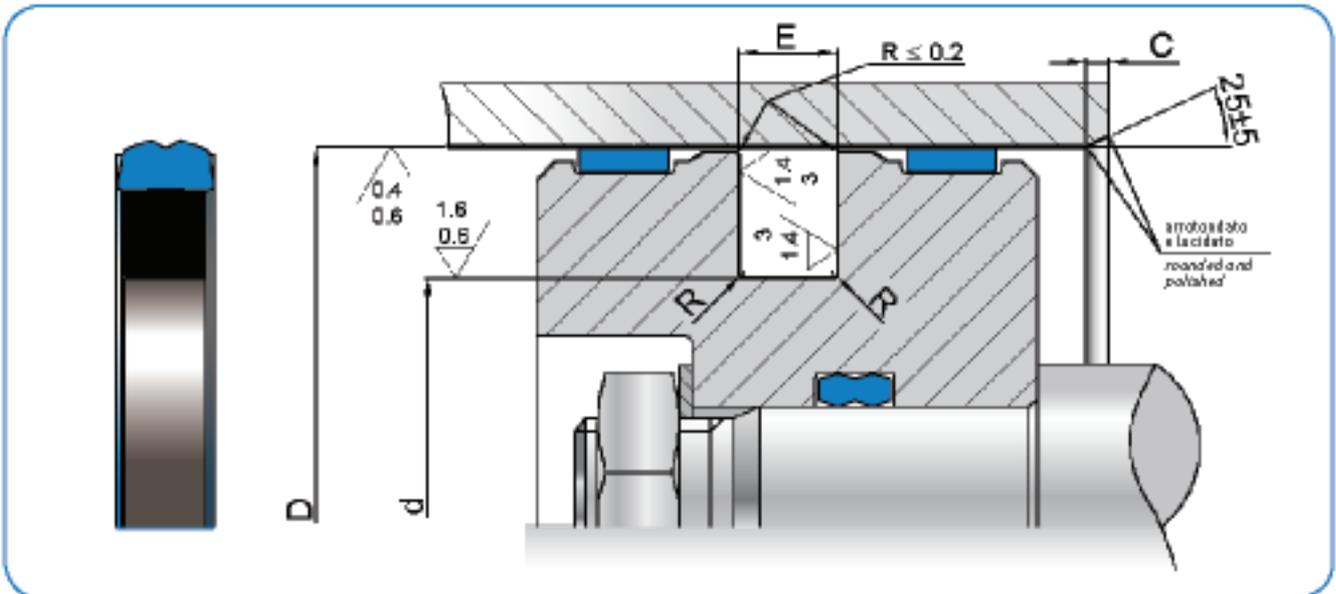

Compound reference: CQ (93 Shore A with Q-ring) or, alternatively, DQ (98 Shore A with Q-ring)

Assembling

Cutting edges or flash must be removed in the housing of the seal.

Ensure a lead-in chamfer in the bore to facilitate the piston installation.

For further information please refer to the assembly instructions on page 26.

TPD

TENUTA PISTONE TIPO TPD

Descrizione

La tenuta pistone tipo TPD consta di un anello opportunamente sagomato in PTFE caricato avente funzione di tenuta dinamica e di un anello O-Ring che effettua la tenuta statica e contemporaneamente svolge un effetto energizzante.

Dati Tecnici

Pressione: < 600 bar

Velocità: < 15 m/s

Temperatura: per il tipo standard con OR in nitrile da - 30° C a + 100° C, con punte per periodi brevi fino a 120° C.
Per range di temperature differente occorre sostituire l'O-Ring con un altro tipo più idoneo

Materiale

Per il tipo standard PTFE caricato a bronzo ed O-Ring in nitrile.

Codice materiale: TN

TPD TYPE PISTON SEAL

Description

The TPD piston seal is composed of two rings. The dynamic seal is a filled PTFE ring with the required shape, the static seal is an O-Ring also working as energizer.

Technical data

Pressure: < 600 bar

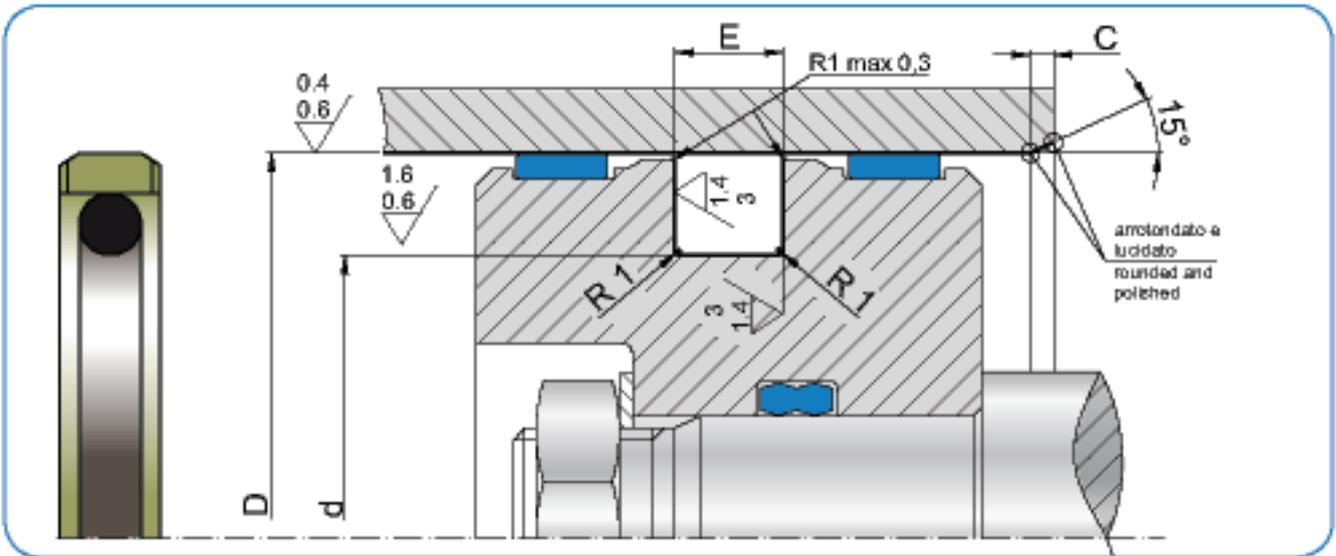

Speed: < 15 m/s

Temperature: from - 30° C up to + 100° C for the standard type with nitrile OR. Short peaks till 120° C. For a different temperature range, the O-Ring should be replaced by a more suitable model

Material

Bronze-filled PTFE for the standard type, and NBR for the O-Ring.

Compound reference: TN

KDSA

TENUTA PISTONE COMPATTA TIPO KDSA

Descrizione

La tenuta pistone compatta tipo KDSA è costituita da un elemento centrale in gomma nitrilica che esercita la funzione di tenuta, da due supporti laterali all'elemento in gomma che agiscono da anelli antiestrusione e da due guide esterne che mantengono in guida il pistone nel cilindro.

Dati tecnici

Pressione: da 0 a 300 bar con punte fino a 400 bar a 60 °C
Velocità: < 0,5 m/s
Temperatura: da - 30 °C a +100 °C
Fluidi: oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

I materiali utilizzati per la costruzione di questodipo di tenuta sono i seguenti:

- L'elemento centrale è in NBR con durezza 70 Shore A \pm 3
- I supporti laterali sono in elastomero termoplastico (TPE)
- Le guide esterne sono in resina poliacetilica (POM)

Codice materiale standard: CX

Montaggio

Il montaggio di questa tenuta può essere eseguito sia in cava chiusa su pistone monoblocco, sia in cava aperta su pistone in due pezzi.

L'ordine del montaggio deve essere il seguente:

- Elemento in gomma;
- Supporti;
- Guide.

E' necessario che il pistone non presenti bave di lavorazione meccanica che danneggerebbero l'elemento in gomma durante il montaggio.

KDSA TYPE COMPACT PISTON SEAL

Description

The KDSA compact seal is made of a central unit made of NBR working as a seal, two side supports, working as anti-extrusion ring, and two external guide rings, keeping aligned the piston in the cylinder.

Technical data

Pressure: from 0 to 300 bar with peaks till 400 bar at 60°C
Speed: < 0,5 m/s
Temperature: from - 30 °C at +100 °C
Fluids: Mineral oils
(see table 1, page 12)

Material

The compounds used to manufacture this seal type are:

- The central units is made of NBR, the hardness is 70 Shore A \pm 3
- The sides support are made of thermoplastic elastomer (TPE)
- The external wear rings are made of polyacetalic resin (POM)

Compound reference: CX

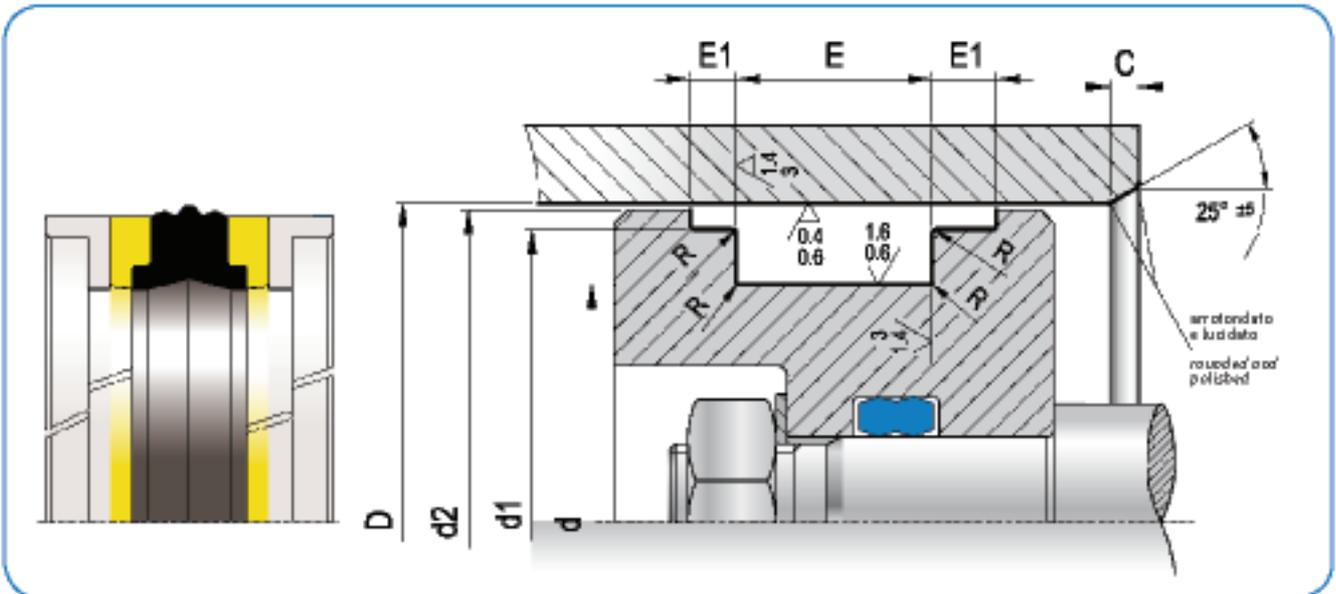

Assembling

The assembling of this seal can be carried out in either closed groove in a mono-block piston, or in open groove in a two-parts piston.

The assembling has to be done as follows:

- Rubber element;
- Supports;
- Wear rings.

The piston must not have machining scores which may damage the rubber unit during the installation.

E' necessario che il pistone non presenti bave di lavorazione meccanica che danneggerebbero l'elemento in gomma durante il montaggio.

KDSB TYPE COMPACT PISTON SEAL

Description

The KDSB compact seal is made of a central unit in NBR working as a seal, two side supports, working as anti-extrusion ring, and two external guide ring keeping aligned the piston in the cylinder.

Technical data

Pressure: from 0 to 300 bar with peaks till 400 bar at 60°C
Speed: < 0,5 m/s
Temperature: from - 30 °C at +100 °C
Fluids: Mineral oils
(see table 1, page 12)

Material

The compounds used to manufacture this seal type are the following:

- The central units is made of NBR, the hardness is 70 Shore A \pm 3
- The sides support are made of a thermoplastic elastomer (TPE)
- The external wear rings are made of polyacetalic resin (POM)

Compound reference: CX

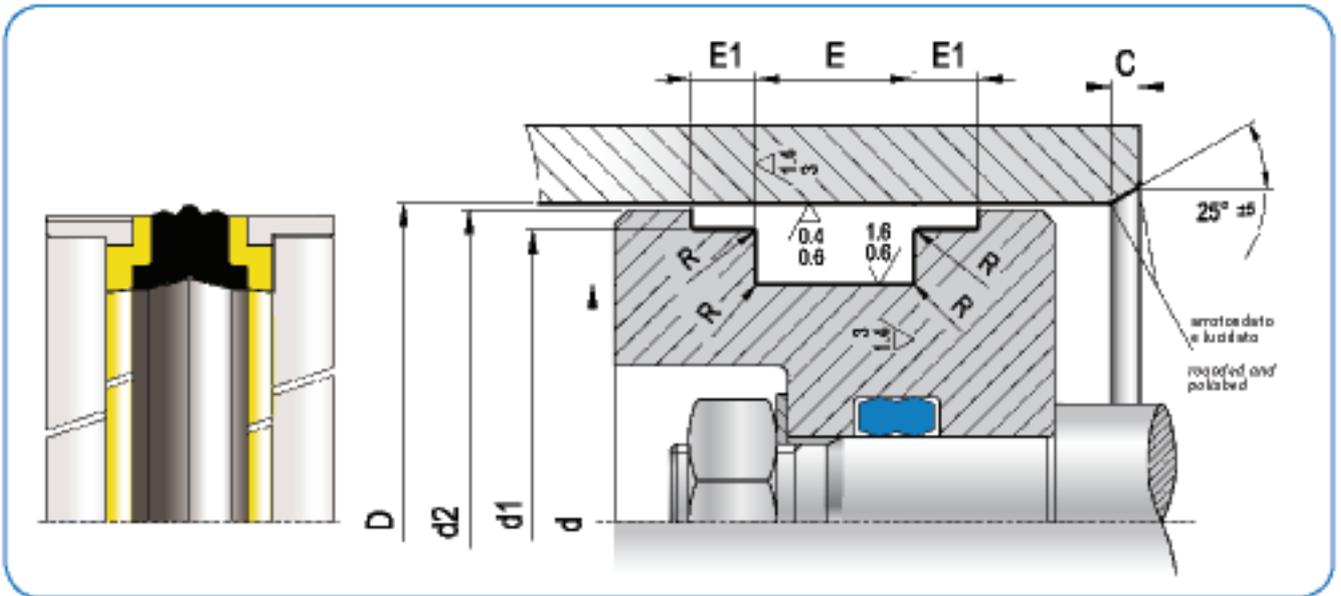

Assembling

The assembling of this seal can be carried out in either closed groove in a mono-block piston, or in open groove in a two-parts piston.

The assembling has to be done as follows:

- Rubber element;
- Supports;
- Wear rings.

Avoid machining scores on the piston which may damage the rubber unit during the installation.

KDSP

TENUTA PISTONE COMPATTA TIPO KDSP

Descrizione

La guarnizione KDSP nasce per tenuta pistone con sedi intercambiabili ISO 6547.

È composta da soli tre elementi: quello centrale in poliuretano (che ha la funzione di tenuta) e due guide laterali in poliacetalica rinforzata vetro.

Questo sistema permette di eliminare i supporti antiestrusione, in quanto l'elemento centrale col suo alto modulo elastico ha una durezza superiore alla gomma nitrilica NBR.

L'attrito di primo distacco ed in esercizio si mantiene basso per la particolare geometria della guarnizione.

Dati tecnici

Pressione: da 0 a 300 Bar con punte fino a 400 Bar a 60° C.

Velocità: 0,8 m/s

Temperatura: da - 30° C a + 100° C

Fluidi: oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

I materiali utilizzati per la costruzione di questo tipo di guarnizione sono i seguenti:

- l'elemento centrale in poliuretano di durezza 93 Shore A Codice materiale tipo C0

- gli elementi laterali in poliacetalica caricata vetro (POM)

Codice materiale: CX

Montaggio

Il montaggio di questa tenuta può essere eseguito sia in cava chiusa su pistone monoblocco, sia in cava aperta su pistone in due pezzi.

È necessario che il pistone non presenti bave di lavorazione meccanica che danneggerebbero l'elemento di tenuta durante il montaggio.

KDSP TYPE COMPACT PISTON SEAL

Description

The KDSP seal is designed to be a piston seal with interchangeable seats ISO 6547.

It consists of only three elements: a polyurethane seal at the middle and two side wiper rings in glass-filled polyacetal resin.

This system doesn't need anti-extrusion supports. Thanks to the high modulus of elasticity and the hardness of the central element higher hardness than Nitrile rubber NBR.

The friction (first operation and in working condition) is low thanks to the particular geometric shape of the seal.

Technical data

Pressure: from 0 to 300 Bar with peaks up to 400 Bar at 60° C.

Speed: 0.8 m/s

Temperature: from - 30° C to + 100° C

Fluids: mineral oils
(see table 1, page 12)

Material

The materials used for the construction of this type of seal are:

- polyurethane for the central element, hardness 93 Shore A, compound reference C0

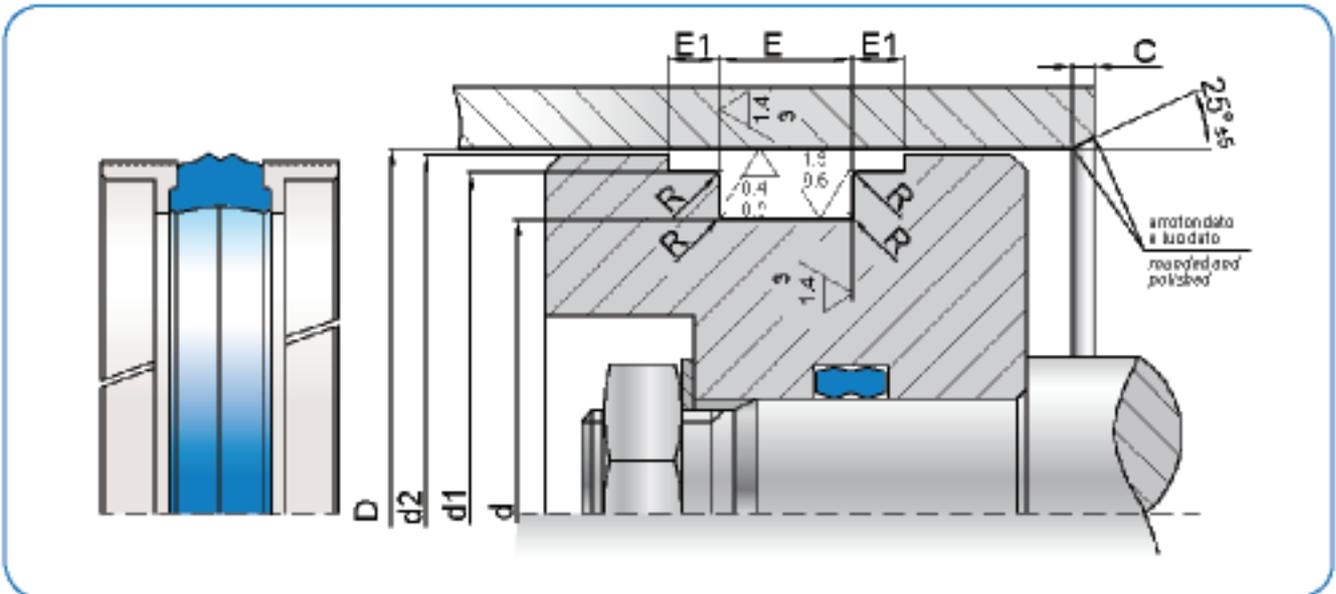

- glass-filled polyacetal resin (POM) for the side elements

Compound reference: CX

Assembling

This seal can be assembled both in closed groove on a mono-block piston and in open groove on a two-part piston.

Avoid machining scores on the piston which may damage the sealing during the installation.

KDAE

TENUTA PISTONE COMPATTA TIPO KDAE

Descrizione

Sempre tra le tenute pistone compatte, la guarnizione KDAE nasce con un elemento centrale in poliuretano e due anelli antiestrusione ai lati.

L'assemblaggio combinato del poliuretano ad alto modulo elastico, con due anelli in elastomero con elevata durezza, rendono la tenuta molto stabile anche alle alte pressioni.

Paragonata alla gomma, l'abrasione risulta molto inferiore con l'utilizzo del poliuretano aumentando in questo caso la durata del pistone stesso.

L'attrito di primo distacco ed in esercizio, per lo speciale profilo geometrico della tenuta, è maggiormente performante rispetto alla guarnizione in NBR.

Dati tecnici

Pressione: da 0 a 400 bar
Velocità: < 0,8 m/s
Temperatura: da - 30° C a + 100° C
con punte fino a 110° C
Fluidi: oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

I materiali utilizzati per la costruzione di questo tipo di tenuta sono i seguenti:

- elemento centrale in poliuretano di durezza 93 Shore A Codice materiale tipo C0.
 - gli anelli antiestrusione laterali in termoplastico di durezza 63 Shore D Codice materiale tipo L2
- Codice materiale: CR

Montaggio

Il montaggio di questa tenuta può essere eseguito sia in cava chiusa su pistone monoblocco, sia in cava aperta su pistone in due pezzi.

È importante che il pistone non presenti bave di lavorazione meccanica che andrebbero a danneggiare la tenuta durante il montaggio.

È consigliato ingrassare il pistone per facilitare il montaggio.

KDAE TYPE COMPACT PISTON SEAL

Description

The KDAE compact piston seal series type is designed with a central polyurethane element and two side anti-extrusion rings.

The assembling between the polyurethane element with high elastic modulus and the two elastomer rings with high hardness enhances stability of the sealing even at heavy duty applications.

Compared to rubber, the abrasion is also reduced due to the use of polyurethane, therefore extending the life of the seal.

The friction (first operation and in working condition) is also considerably reduced, due to geometric shape of the seal, having better performance than NBR.

Technical data

Pressure: from 0 to 400 bar
Speed: < 0.8 m/s
Temperature: from - 30° C to + 100 °C with peaks up to + 110° C
Fluids: mineral oils
(see table 1, page 12)

Material

The materials used for the construction of this type of seal are:

- polyurethane for the central element, hardness 93 Shore A (C0)
 - the backup rings in TPE elastomer 63 Shore D (L2)
- Compound reference: CR

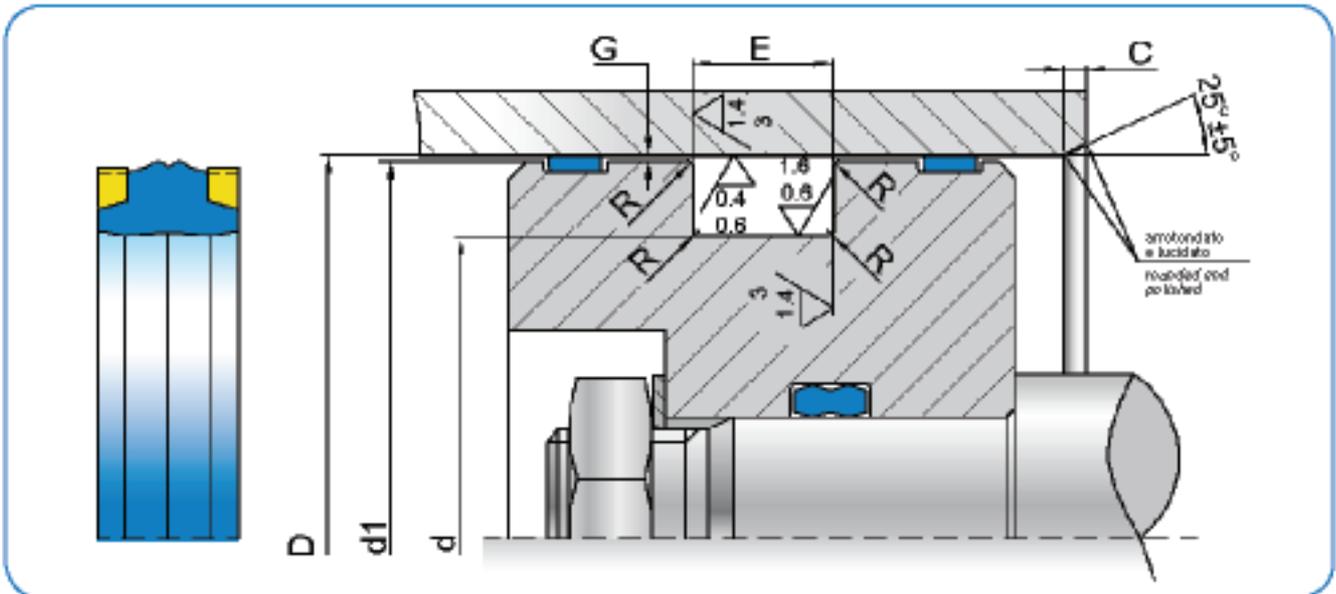

Assembling

This seal can be assembled both in closed groove on a mono-block piston and in open groove on a two-part piston.

Avoid machining scores on the piston which

May damage the sealing during the installation

The use of grease in the piston is recommended for easier assembling.

HIS

ANELLI GUIDA INTERNO TIPO HIS

Descrizione

I pattini di guida tipo HIS, hanno la funzione di mantenere in asse tutto il sistema cilindro (stelo con testata, pistone con camicia). Svolgono una funzione importante aiutando la tenuta stelo, il raschiatore e la tenuta pistone a lavorare senza disallineamenti evitando allo stesso tempo il contatto tra le parti metalliche. Il materiale con un coefficiente di attrito molto basso non crea perdite di carico (linearità). Sopporta deformazioni sotto carico elevate avendo un punto di rammollimento vicino al punto di fusione (lavora in esercizio a 115° C). Per facilitare la scelta della guida pistone o stelo consigliamo questa formula per conoscere l'altezza della guida da inserire nel sistema.

$$h = \frac{F \times 2}{D \times Q} \text{ per pistone} \quad \text{e} \quad h = \frac{F \times 2}{d \times Q} \text{ per stelo}$$

Dove:

h = altezza guida in mm.

F = forza radiale applicata

Q = forza radiale sopportata dal materiale

D = diametro camicia

d = diametro stelo

Dati tecnici

Velocità: < 0,8 m/s

Temperatura: da - 40° C a + 115° C

Carico radiale Q: 35 N/mm² a temperatura di 60° C

Fluidi: oli e fluidi a base minerale
(vedi tabella 1 a pagina 12)

Materiale

Il materiale è una resina poliacetalica rinforzata con fibra di vetro.

Per temperature di esercizio superiori ai 115° C il materiale è una resina poliammidica rinforzata.

Codice materiale per temp < 115° C: R0

Codice materiale per temp > 115° C: R1

Montaggio

Il montaggio si esegue facilmente essendo la guida tagliata ed avendo un'ottima elasticità.

La presenza sui due lati di smussi facilita l'inserimento dello stelo.

HIS TYPE INTERNAL WEAR RING

Description

The HIS wear rings have been developed in order to keep all the parts of the cylinder aligned (the rod with the head, the piston with the bore).

They play an important role as they help the rod seal, the wiper and the piston seal working without any misalignments and at the same time they prevent any contact between the metal parts. The material, which has a very low friction factor, does not cause load losses (linearity).

It endures deformations under heavy loads, as the softening point is close to the fusion point (it works at 115° C). For an easier choice of the piston or rod guide, we suggest the use of this formula to find the wear ring length.

$$h = \frac{F \times 2}{D \times Q} \text{ for the piston} \quad \text{and} \quad h = \frac{F \times 2}{d \times Q} \text{ for the rod}$$

Where:

h = wear ring length in mm.

F = radial force applied

Q = radial force endured by the material

D = bore diameter

d = rod diameter

Technical data

Speed: < 0,8 m/s

Temperature: from - 40° C to + 115° C

Radial load Q: 35 N/mm² at a temperature of 60° C

Fluids: mineral oils and fluids
(see table 1, page 12)

Material

The material is a polyacetalic resin reinforced with fibreglass.

For working temperatures higher than 115° C, the material is a reinforced polyamidic resin.

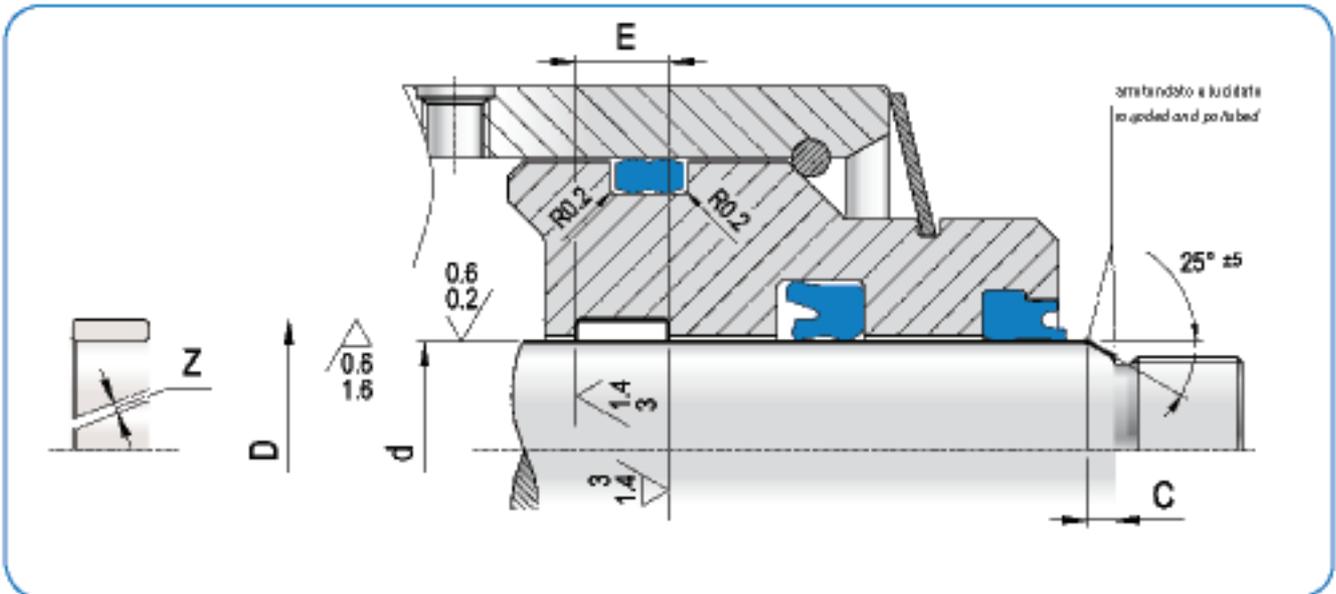

Compound reference for temp < 115° C: R0

Compound reference for temp > 115° C: R1

Assembling

The assembling can be easily done since the wear ring is cut and extremely elastic.

The chamfers on both sides have been studied to better insert the wear ring in the rod.

HES

ANELLI GUIDA ESTERNO TIPO HES

Descrizione

I pattini di guida tipo HES, hanno la funzione di mantenere in asse tutto il sistema cilindro (stelo con testata, pistone con camicia). Svolgono una funzione importante aiutando la tenuta stelo, il raschiatore e la tenuta pistone a lavorare senza disallineamenti evitando allo stesso tempo il contatto tra le parti metalliche. Il materiale con un coefficiente di attrito molto basso non crea perdite di carico (linearità). Sopporta deformazioni sotto carico elevate avendo un punto di rammollimento vicino al punto di fusione (lavora in esercizio a 115° C). Per facilitare la scelta della guida pistone o stelo consigliamo questa formula per conoscere l'altezza della guida da inserire nel sistema.

$$h = \frac{F \times d^2}{D \times Q} \text{ per pistone} \quad \text{e} \quad h = \frac{F \times d^2}{d \times Q} \text{ per stelo}$$

Dove:

h = altezza guida in mm.

F = forza radiale applicata

Q = forza radiale sopportata dal materiale

D = diametro camicia

d = diametro stelo

Dati tecnici

Velocità: < 0,8 m/s

Temperatura: da -40° C a + 115° C

Carico radiale Q: 35 N/mm² a temperatura di 60° C

Fluidi: oli e fluidi a base minerale
(vedi tabella 1 a pagina 12)

Materiale

Il materiale è una resina poliacetalica rinforzata con fibra di vetro. Per temperature di esercizio superiori ai 115° C il materiale è una resina poliammidica rinforzata. Codice materiale per temp < 115° C: R0
Codice materiale per temp > 115° C: R1

Montaggio

Il montaggio si esegue facilmente essendo la guida tagliata ed avendo un'ottima elasticità. La presenza sui due lati di smussi facilita l'inserimento dello stelo.

HES TYPE EXTERNAL WEAR RING

Description

The HES wear rings have been developed in order to keep all the parts of the cylinder aligned (the rod with the head, the piston with the bore). They play an important role as they help the rod seal, the wiper and the piston seal working without any misalignments and at the same time they prevent any contact between the metal parts. The material, which has a very low friction factor, does not cause load losses (linearity). It endures deformations under heavy loads, as the softening point is close to the fusion point (it works at 115° C).

For an easier choice of the piston or rod guide, we suggest the use of this formula to find the wear ring length.

$$h = \frac{F \times d^2}{D \times Q} \text{ for the piston} \quad \text{and} \quad h = \frac{F \times d^2}{d \times Q} \text{ for the rod}$$

Where:

h = wear ring length in mm.

F = radial force applied

Q = radial force endured by the material

D = bore diameter

d = rod diameter

Technical data

Speed: < 0,8 m/s

Temperature: from -40° C to + 115° C

Radial load Q: 35 N/mm² at a temperature of 60° C

Fluids: mineral oils and fluids
(see table 1, page 12)

Material

The material is a polyacetalic resin reinforced with fibreglass.

For working temperatures higher than 115° C, the material is a reinforced polyamidic resin.

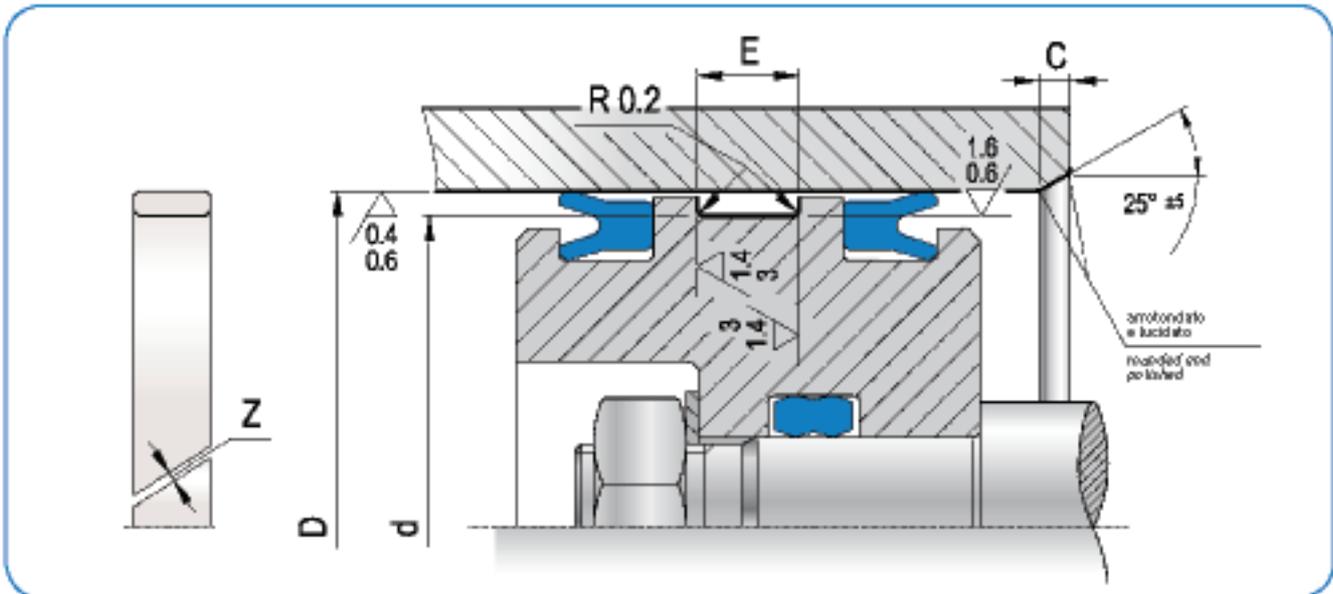

Compound reference for temp < 115° C: R0

Compound reference for temp > 115° C: R1

Assembling

The assembling can be easily done since the wear ring is cut and extremely elastic.

The chamfers on both sides have been studied to better insert the wear ring in the rod.

Remark: please contact our technical dept. for further dimensions not included in the catalogue.

Anelli guida in PTFE e resina fenolica

PTFE or phenolic fabrics guide rings

Materiale

In funzione delle specifiche esigenze determinate dal carico radiale del cilindro si possono utilizzare questi materiali.

- PTFE caricato bronzo (TM o TV) resistente all'usura, basso attrito, per applicazioni di basso-medio carico,
- tessuto rinforzato con resina fenolica (FR), per sopportare elevati carichi radiali.

Dati Tecnici del PTFE

| | |
|-----------------|---|
| Velocità: | 15 m/s |
| Temperatura: | da - 50° C a + 160° C, con punte a 200° C. |
| Carico Radiale: | 15 N/mm a 30° C 12 N/mm a 80° C 8 N/mm a 120° C |
| Fluidi: | Oli a base minerale (vedi tabella 1 a pagina 12) |

Montaggio

Il montaggio si esegue facilmente essendo le guide tagliate.

Dati Tecnici della Resina Fenolica

| | |
|-----------------|-------------------------------------|
| Velocità: | 1 m/s |
| Temperatura: | da - 50° C a + 150° C |
| Carico Radiale: | 120 N/mm a 25° C 60 N/mm a 80° C |
| Fluidi: | Oli a base minerale |

Montaggio

Il montaggio si effettua in cave chiuse essendo la guida tagliata. Il materiale elastico e il profilo con smussi interni ed esterni facilita l'inserimento nel cilindro.

Material

The choice of the material depends on the specific needs arising from the cylinder radial load.

- PTFE with bronze (TM or TV), wear resistant, low friction, for low and medium load .
- Fabrics-reinforced phenolic (FR) resin, for high radial loads.

PTFE Technical Data

| | |
|--------------|--|
| Speed: | 15 m/s |
| Temperature: | from - 50° C a + 160° C, with pick at 200° C. |
| Radial Load: | 15 N/mm at 30° C 12 N/mm at 80° C 8 N/mm at 120° C |
| Fluids: | Mineral Oil (see table 1, page 12) |

Assembling

The assembling can be easily done since the wear ring is cut.

Phenolic Resin Technical Data

| | |
|--------------|---------------------------------------|
| Speed: | 1 m/s |
| Temperature: | from - 50° C to + 150° C |
| Radial Load: | 120 N/mm at 25° C 60 N/mm at 80° C |
| Fluids: | Mineral Oil |

Assembling

The assembling can be easily done in closed groove since the wear ring is cut and elastic.

The chamfers on both sides have been studied to better insert the wear ring in the cylinder.

Dimensionamento

Utilizzando la seguente formula si possono calcolare le altezze delle guide come illustrato in Fig.1

$$\text{Altezza Guida } T = \frac{C * f}{D * Cr}$$

Dove:

- C: carico radiale previsto in N [Newton]
 f: fattore di sicurezza [2]
 D: diametro stelo o camicia
 Cr: carico radiale ammissibile in N\mm
 Riferito al materiale (PTFE o Resina fenolica)

Esempio di calcolo per PTFE

| | |
|---------------------------|---------|
| Temperatura: | 80[°C] |
| Carico Radiale: | 8000[N] |
| Diametro stelo o camicia: | 80[mm] |

$$\text{Altezza Guida } T = \frac{8000 * 2}{80 * 12} = 16,66 \text{ [mm]}$$

Esempio di Calcolo per Resina Fenolica

| | |
|---------------------------|----------|
| Temperatura: | 80[°C] |
| Carico Radiale: | 16000[N] |
| Diametro stelo o camicia: | 80[mm] |

$$\text{Altezza Guida } T = \frac{16000 * 2}{80 * 60} = 6,66 \text{ [mm]}$$

Dimensioning

The following formula can be used to calculate the wear ring's height as shown in Pic.1

$$\text{Wear ring's height } T = \frac{C * f}{D * Cr}$$

As:

- C: radial load in N [Newton]
 f: safety factor [2]
 D: rod and bore diameter
 Cr: allowable radial load reported materia
 (PTFE or Phenolic Resin)

Example for PTFE

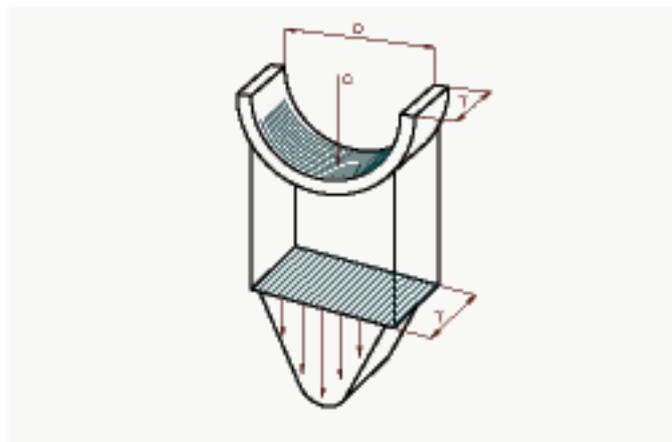

| | |
|-----------------------|---------|
| Temperature: | 80[°C] |
| Radial load: | 8000[N] |
| Rod or Bore diameter: | 80[mm] |

$$\text{Wear ring's height } T = \frac{8000 * 2}{80 * 12} = 16,66 \text{ [mm]}$$

Example of Phenolic Resin

| | |
|-----------------------|----------|
| Temperature: | 80[°C] |
| Radial load: | 16000[N] |
| Rod or Bore Diameter: | 80[mm] |

$$\text{Wear ring's height } T = \frac{16000 * 2}{80 * 60} = 6,66 \text{ [mm]}$$

NG

NASTRO GUIDA IN PTFE TIPO NG

Descrizione

Il nastro guida NG in politetrafluoroetilene caricato bronzo viene fornito in rotoli dai quali si possono ricavare guide che possono essere intercambiabili con quelle in materiale termoplastico. Vengono applicate sia su stelo che su pistone. Hanno come caratteristica principale, la precisione dello spessore e la quasi assenza di attrito. Per la sua inerzia chimica, sono compatibili con molti fluidi. Possono essere con o senza smussi di invito.

Dati Tecnici

Velocità: < 15 m/s
Temperatura: da -50°C a +160°C con punte a 200°C
Fluidi: molti fluidi essendo un materiale con inerzia chimica elevata
(vedi tabella 1 a pagina 12)

Materiale

Il materiale è politetrafluoroetilene (PTFE) con cariche interne di bronzo.

Codice materiale:
TV LBR4030 (verde),
TM LBR4003 (grigio/ marrone)

NG TYPE PTFE WEAR TAPE

Description

NG bronze filled Polytetrafluoroethylene tape is supplied in rolls.
By cutting them it is possible to obtain interchangeable guides to replace thermoplastic material. They can be used for rods or pistons. Thanks to the properties (thickness accuracy, low friction and chemical resistance) are compatible with many fluids. They can be with or without chamfers.

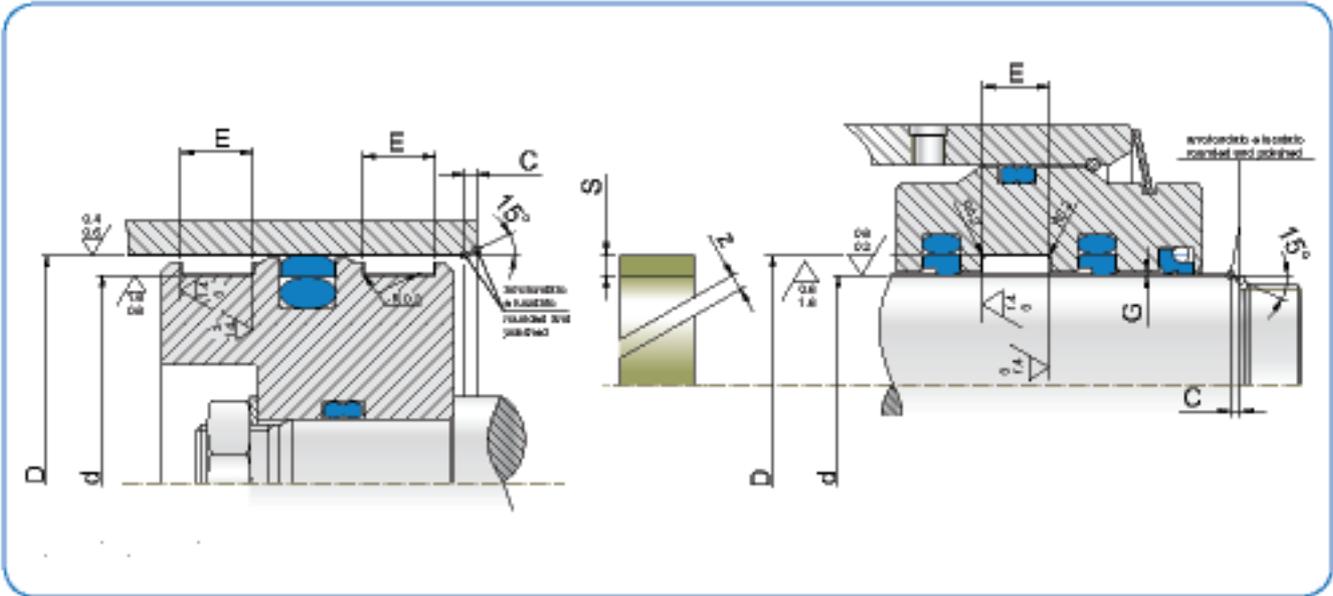

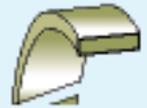

Technical Data

Speed: < 15 m/s
Temperature: from -50°C to +160°Ct peaks till 200°C.
Fluidi: many fluids as a material with high chemical inertia
(see table 1, page 12)

Material

The material is bronze filled polytetrafluoroethylene (PTFE).

Compound reference:
TV LBR4030 (green),
TM LBR4003 (dark brown)

HPWI

GUIDA TIPO HPWI

Descrizione

Le HPW sono guide in resina fenolica e possono essere intercambiabili con quelle in materiale termoplastico. Vengono applicate su stelo. Sono ricavate da un tubo per tornitura, il che garantisce un'alta precisione di spessore. Supportano carichi molto elevati e vengono utilizzate in impieghi molto gravosi.

Dati Tecnici

Velocità: 1 m/s

Temperatura: da - 40° C a + 130° C

Fluidi: oli idraulici a base minerale
(vedi tabella 1 a pagina 12)

Materiale

Il materiale è una resina fenolica impregnata in trecce di cotone naturale. Può essere caricata con grafite, PTFE e Bisolfuro di molibdeno (MoS₂).

HPWI TYPE WEAR RING

Description

HPWI phenolic resin guides can be interchangeable with other thermoplastic wear rings. They can be used for rods or pistons. They are produced from tubes with high thickness accuracy, supporting very high loads and are used in very heavy conditions.

Technical Data

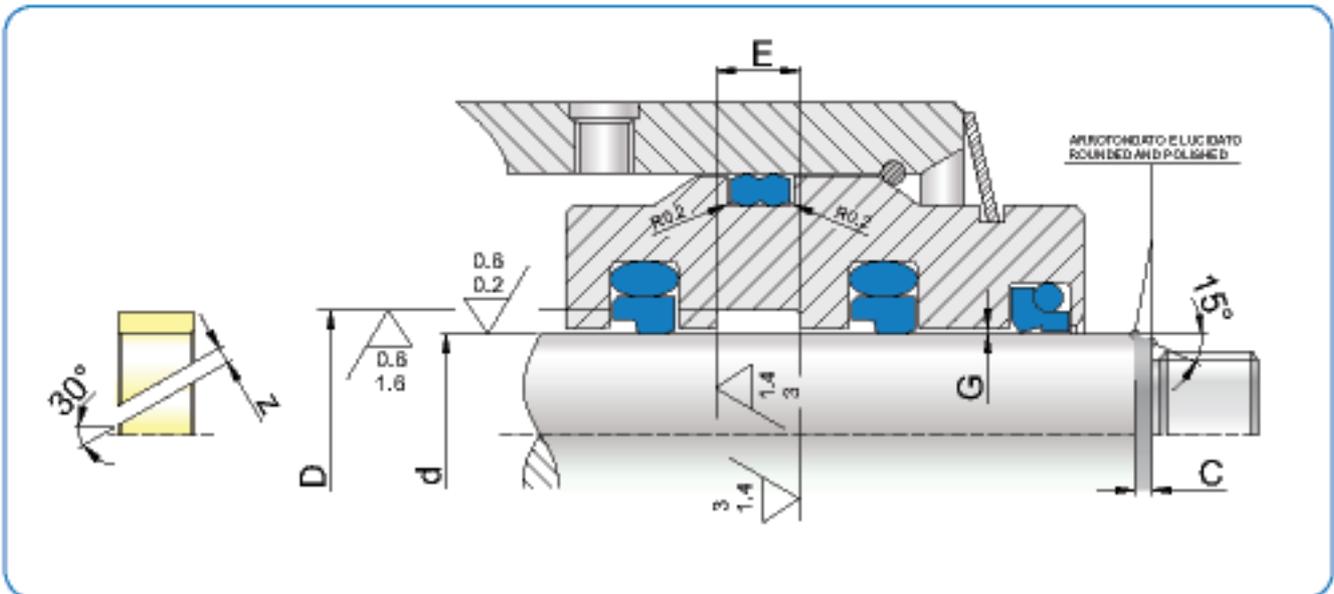

Speed: < 1 m/s

Temperature: from - 40° C a + 130° C

Fluids: hydraulic mineral oil
(see table 1, page 12)

Material

The material is a impregnated phenolic resin in natural cotton braids. Can be filled with graphite, PTFE and molybdenum disulfide (MoS₂).

HPWE

GUIDA TIPO HPWE

Descrizione

Le HPW sono guide in resina fenolica e possono essere intercambiabili con quelle in materiale termoplastico. Vengono applicate su pistone. Sono ricavate da un tubo per tornitura, il che garantisce un'alta precisione di spessore. Supportano carichi molto elevati e vengono utilizzate in impieghi molto gravosi.

Dati Tecnici

Velocità: 1 m/s

Temperatura: da -40° C a +130° C

Fluidi: oli idraulici a base minerale
(vedi tabella 1 a pagina 12)

Materiale

Il materiale è una resina fenolica impregnata in trecce di cotone naturale. Può essere caricata con grafite, PTFE e Bisolfuro di molibdeno (MoS₂).

HPWE TYPE WEAR RING

Description

HPWE phenolic resin guides can be interchangeable with other thermoplastic wear rings. They can be used for rods or pistons. They are produced from tubes with high thickness accuracy, supporting very high loads and are used in very heavy conditions.

Technical Data

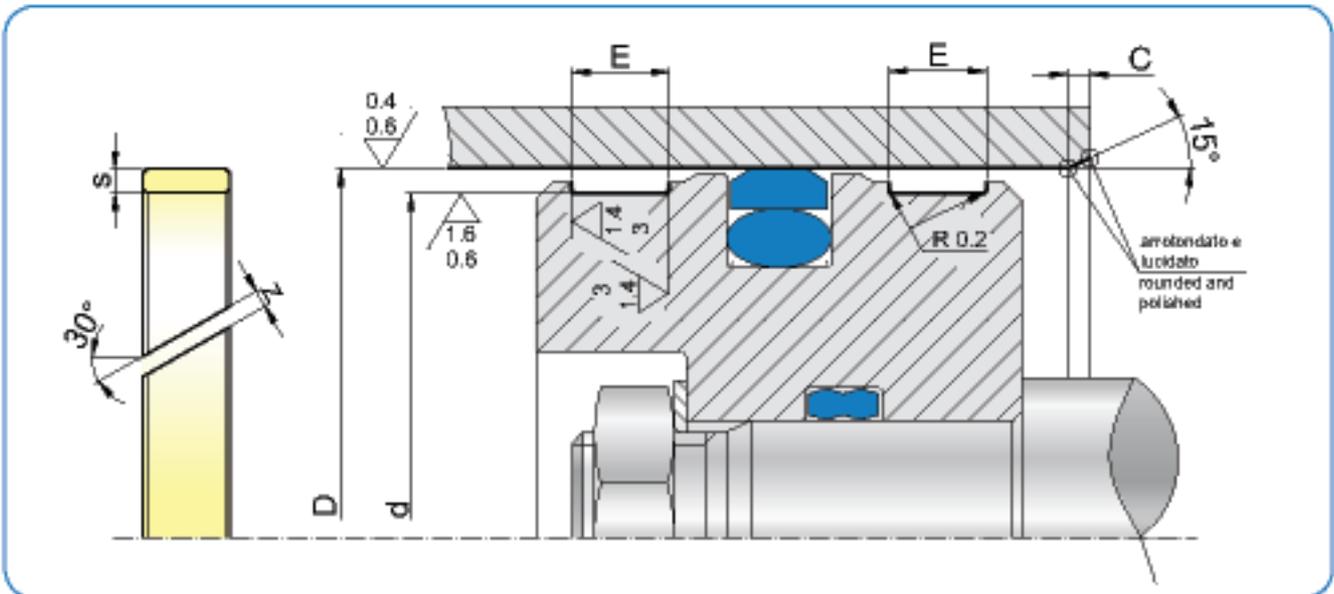

Speed: < 1 m/s

Temperature: from -40° C a +130° C

Fluids: hydraulic mineral oil
(see table 1, page 12)

Material

The material is a impregnated phenolic resin in natural cotton braids. Can be filled with graphite, PTFE and molybdenum disulfide (MoS₂).

WSL

RASCHIATORE STELO TIPO WSL

Descrizione

Il raschiatore tipo WSL ha un labbro raschiante molto flessibile nella parte dinamica e un labbro sporgente, più corto e molto robusto nella parte statica.

Questo profilo speciale, sia dal lato stelo sia dal lato esterno statico, impedisce alle impurità quali scorie acqua ed altro, di penetrare, cosa che andrebbe a danneggiare la guarnizione di tenuta ed a corrodere la parte interna del cilindro.

Dati tecnici

Velocità: < 1 m/s
Temperatura: da - 35° C a + 100° C con punte fino a +110° C
Fluidi: acqua a temperatura ambiente, oli minerali
(vedi tabella 1 a pagina 12)

Materiale

I materiali utilizzati sono dei poliuretani che resistono agli agenti atmosferici, con alto modulo elastico e resistenti all'abrasione.
Il materiale standard è di durezza 93 Shore A \pm 2.
In alternativa è possibile utilizzare poliuretani di durezza superiore quando esistono condizioni gravose in ambienti molto inquinanti. In questo caso consultare il nostro ufficio tecnico.
Codice materiale: C0

Montaggio

Non presenta particolari problemi essendo in sede semiaperta collocata nella parte più vicina all'esterno del cilindro.
Si raccomanda di eliminare gli spigoli taglienti e le bave per non incidere il raschiatore durante il montaggio.
Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

WSL ROD WIPER

Description

The WSL wiper has a high flexible wiping lip on the dynamic side and a strong, shorter, protruding lip on the static side.

This special profile keeps the rod and the static side where it is housed free from any impurity, waste or water. Impurities would damage the seal and corrode the inner part of the cylinder.

Technical data

Speed: < 1 m/s
Temperature: from - 35° C to + 100° C with peaks till +110° C
Fluids: water at room temperature, mineral oils
(see table 1, page 12)

Material

The material used is a polyurethane with a high modulus of elasticity, low compression set and high wear resistance.
Its hardness is 93 Shore A \pm 2.
Compound reference: C0

Assembling

It is not very problematic as it can be done in semi open groove located in the nearest part outside the cylinder.
Remove cutting edges and flashes to avoid the scratching of the wiper during the installation.
For further information please refer to the installation instructions on page 26.

WSG

RASCHIATORE CON STEP TIPO WSG

Descrizione

Il raschiatore tipo WSG ha la funzione di pulire lo stelo al suo rientro, mantenendo all'esterno le impurità.

E' composto da un'anima metallica incollata ad un elemento in poliuretano.

La cava risulta aperta facilitando l'esecuzione della sede.

Dati tecnici

Velocità: < 0,8 m/s

Temperatura: da - 35° C a + 100 ° C con punte fino a 110° C.

Fluidi: agenti atmosferici, acqua a temperatura inferiore a 60° C, oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

Il materiale del raschiatore è un poliuretano di durezza 93 Shore A e anima in acciaio.

Codice materiale: CA

Montaggio

Il montaggio avviene in cava aperta.

Togliere gli spigoli vivi e le bave per facilitarne l'inserimento.

Attenzione: la cava dove alloggia il raschiatore deve essere in tolleranza di lavorazione come indicato nella colonna D. Il mancato rispetto della misura della tolleranza può causare la fuoriuscita del manufatto durante il movimento.

WSG TYPE WIPER WITH STEP

Description

The function of the WSG wiper is to clean the rod while returning to position, blocking external impurities.

It is made up of a metal core bonded to a polyurethane element.

The groove is open and allows easier design of the seat.

Technical data

Speed: < 0.8 m/s

Temperature: from - 35° C to + 100 ° C with peaks till 110° C.

Fluids: atmospheric factors, water at a temperature below 60° C, mineral oils
(see table 1, page 12)

Material

The material of the wiper is a polyurethane with a hardness of 93 Shore A and steel core.

Compound reference: CA

Assembling

The assembling is done in open groove.

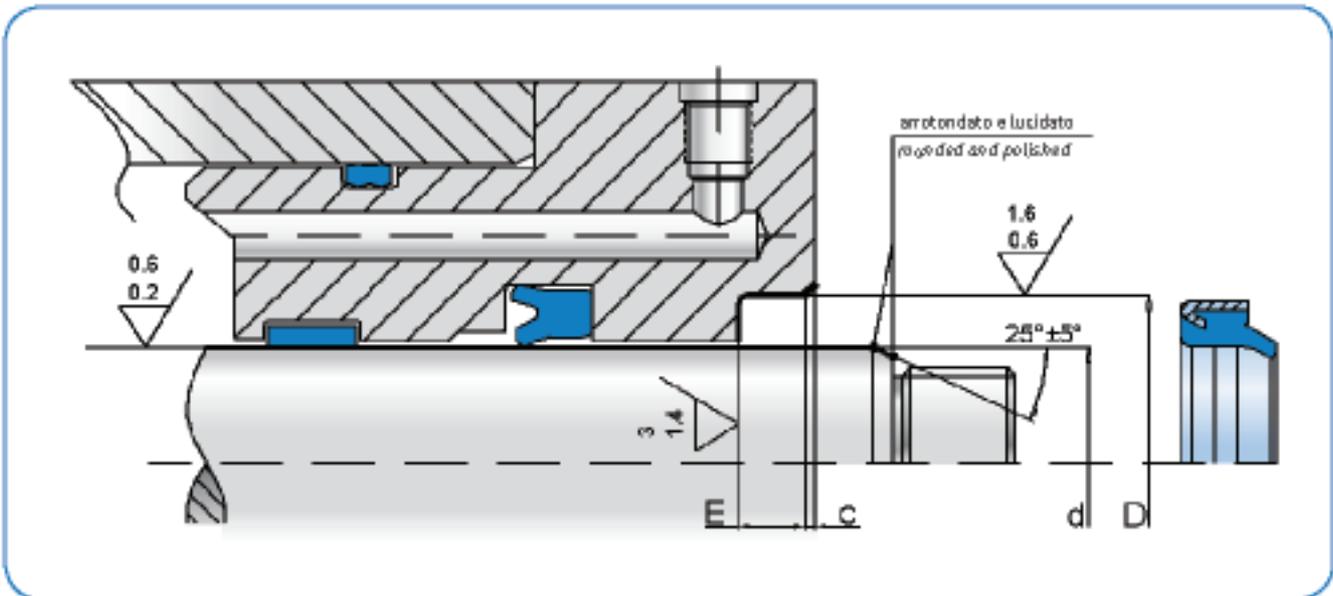

Remove flashes and cutting edges to allow better installation of the wiper.

Warning: The housing of the wiper must be within the machining tolerance as shown in column D.

Not observed tolerances may cause the extrusion of the product during the operations.

R09

RASCHIATORE TIPO R09

Descrizione

Il raschiatore R09 ha la funzione di pulire lo stelo al suo rientro, mantenendo all'esterno le impurità. E' composto da un'anima metallica rettificata all'esterno e incollata ad un elemento raschiante in NBR.

La cava che alloggia il raschiatore è aperta, facilitandone il montaggio.

Dati tecnici

Velocità: < 1 [m/s]
Temperatura: - 30 °C ÷ +100 °C
Fluidi: agenti atmosferici, acqua, sabbia ecc.
(vedi tabella 1 a pagina 12)

Materiale

Il materiale del raschiatore è in gomma nitrilica NBR 90 Shore A e anima in acciaio AISI 1010.
Codice materiale standard: NG

Montaggio

Il montaggio avviene in cava aperta.
Togliere spigoli vivi e le bave per facilitarne l'inserimento.

Attenzione: la cava dove alloggia il raschiatore deve essere in tolleranza di lavorazione come indicato nella colonna D.

Il mancato rispetto della tolleranza può causare la fuoriuscita del manufatto durante il movimento alternativo lineare.

R09 TYPE WIPER

Description

The function of the R09 wiper is cleaning the rod while return into position, blocking external impurities.

It is made up of an external, grinded metal cage part glued to a NBR element.

The groove is open and makes easier the design of the seat.

Technical data

Speed: < 1 [m/s]
Temperature: - 30 °C ÷ +100 °C mescola NBR
Fluids: atmospheric factors, water, sand, etc.
(see table 1, page 12)

Material

The wiper material is a nitrile rubber NBR 90 Shore A with steel core AISI 1010.
Compound reference: NG

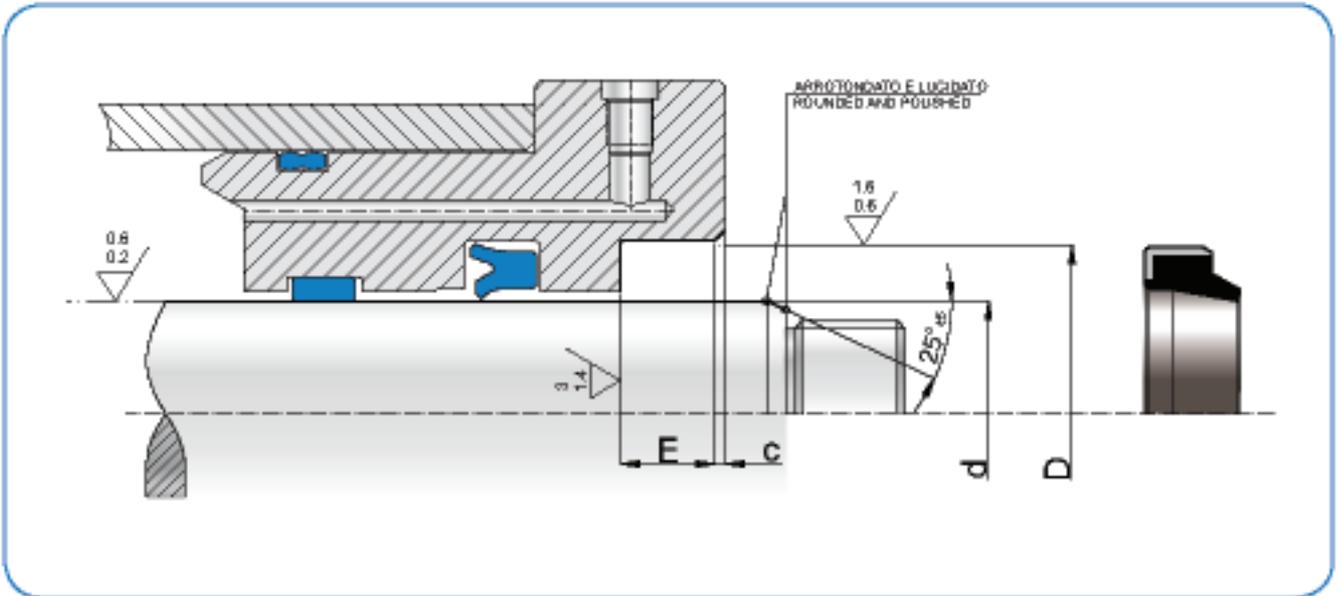

Assembling

The assembling is done in open groove.
Remove flashes and cutting edges to allow better installation of the wiper.

Warning: The housing of the wiper must be within the machining tolerance as shown in column D.

Not observed tolerances may cause the extrusion of the product during the operations.

WWS

RASCHIATORE CON STEP TIPO WWS

Descrizione

Il raschiatore tipo WWS a differenza di altri profili, presenta un gradino sul lato statico che serve per agganciarlo alla sede.

Questo facilita il montaggio in automatico del particolare e l'esecuzione meccanica della sede risulta molto semplice.

Ha dei notches nella base interna che hanno la funzione di stabilizzatori e assicurano uno sfuocamento della pressione che potrebbe crearsi a causa di perdite tra guarnizione e raschiatore con conseguente espulsione dalla sede di quest'ultimo.

Dati tecnici

Velocità: < 1 m/s

Temperatura: da - 35° C a + 100° C con punte fino a +110° C

Fluidi: acqua a temperatura ambiente, oli minerali
(vedi tabella 1 a pagina 12)

Materiale

Il materiale utilizzato è un poliuretano molto flessibile anche a basse temperature con una alta resistenza all'abrasione.

Materiale standard poliuretano 90 Shore A (B0) fino al diametro 35mm.

Per diametri maggiori il poliuretano 93 Shore A (C0)

Codice materiale per diam ≤ 35mm: B0

Codice materiale per diam > 36mm: C0

Montaggio

Essendo in sede semiaperta il montaggio è molto facilitato.

Eliminare le bave e spigoli taglienti nella sede.

Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

WWS WIPER TYPE WITH STEP

Description

The WWS scraper, unlike other profiles, has a step in the static side which hooks it to the housing.

This helps automated assembling and makes the mechanical construction of the groove extremely easy.

It presents notches in the wiper inner base having a stabilisation effect, ensuring good ventilation.

This avoids extrusion problems.

Technical data

Speed: < 1 m/s

Temperature: from - 35° C to + 100° C with peaks till +110° C

Fluids: water at room temperature, mineral oils
(see table 1, page 12)

Material

The material used is a very flexible polyurethane, even at low temperatures, with a high abrasion resistance.

Standard polyurethane 90 Shore A up to diameter 35 mm (B0).

For bigger dimensions standard polyurethane 93 Shore A (C0).

Compound reference diam ≤ 35mm: B0

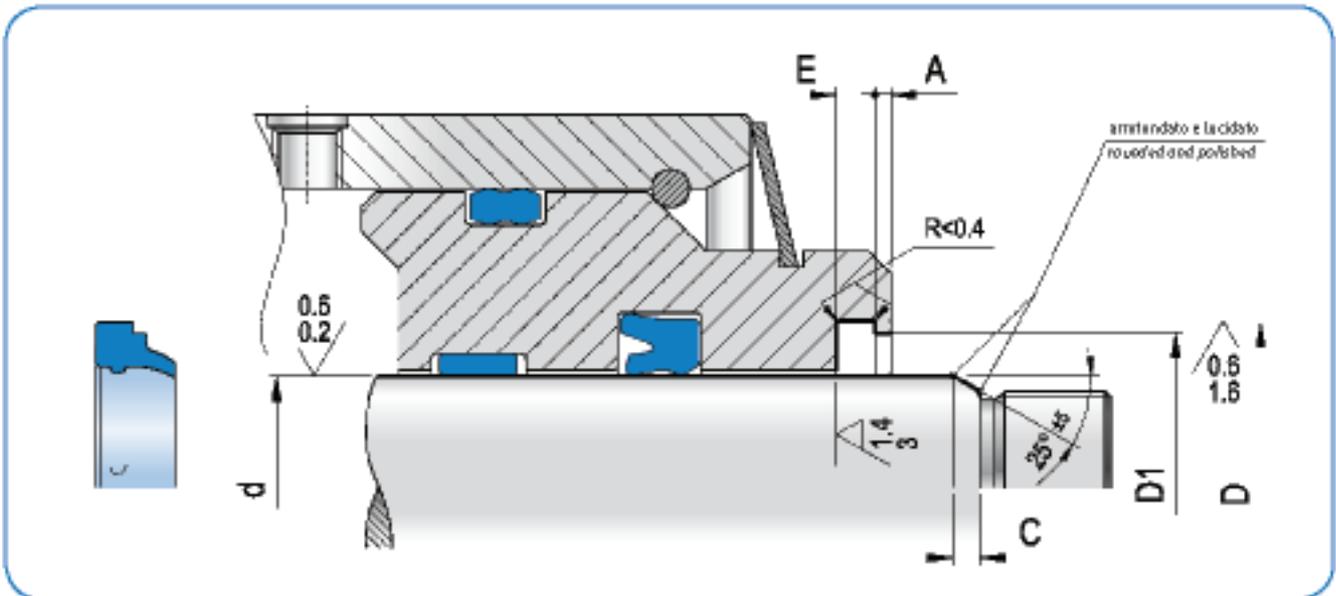

Compound reference diam > 36mm: C0

Assembling

The assembling is much easier since it can be done in semi-open groove.

Remove flashes an/or cutting edges in the housing.

For further information please refer to the installation instructions on page 26.

Remark: please contact our technical dept. for further dimensions not included in the catalogue.

WAT

RASCHIATORE ANTI-RIBALTAMENTO TIPO WAT

Descrizione

Il raschiatore tipo WAT ha, grazie allo speciale profilo, la possibilità di autoallinearsi quando lo stelo, durante l'esercizio, è soggetto a forti disallineamenti.

Presenta due labbri che lo fanno assomigliare a una tenuta: il labbro dinamico raschiante più lungo e molto flessibile, il labbro statico più corto, che evita, appoggiandosi sul gradino trattenitore, l'entrata dall'esterno delle impurità.

Dati tecnici

Velocità: < 1 m/s
Temperatura: da - 35° C a + 100° C con punte fino a +110° C
Fluidi: acqua a temperatura ambiente, oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

I materiali utilizzati sono dei poliuretani che resistono agli agenti atmosferici con alto modulo elastico e resistenti all'abrasione.
Il materiale standard è di durezza 93 Shore A \pm 2.
In alternativa è possibile utilizzare poliuretani di durezza superiore quando esistono condizioni gravose in ambienti molto inquinati. In questo caso consultare il nostro ufficio tecnico.
Codice materiale: C0

Montaggio

Il montaggio risulta molto semplice essendo la sede semiaperta.
Eliminare gli spigoli taglienti e le bave nella sede.
Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

WAT NO-TWISTING TYPE WIPER

Description

The WAT wiper can be self-aligned in case of rod misalignment during operations, thanks to its special profile and design.

It presents two lips and it's similar to a seal: the scraping lip is longer, very flexible and dynamic the static lip is shorter and stops the impurity sticking to the blocking step.

Technical data

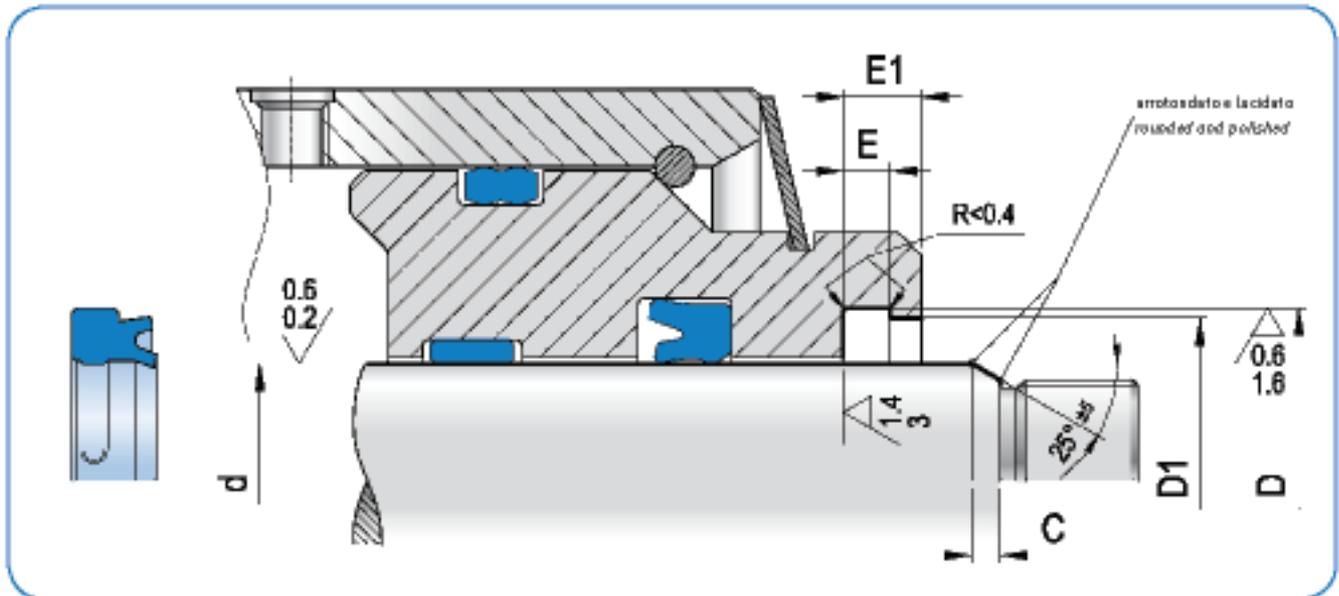

Speed: < 1 m/s
Temperature: from - 35° C to + 100° C with peaks till +110° C
Fluids: water at room temperature mineral oils
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.
The hardness is 93 Shore A \pm 2.
Compound reference: C0
It is also possible to use harder polyurethanes for heavy polluted environments.
In case please contact our technical department.

Assembling

The assembling is extremely easy because of the semi-open groove.
Remove flashes an/or cutting edges in the housing.
For further information please refer to the installation instructions on page 26.

TRD

ANELLO RASCHIATORE TIPO TRD

Descrizione

I raschiatori tipo TRD sono composti da un elemento in PTFE+O-Ring che svolge tenuta nella parte statica e contemporaneamente ha un effetto energizzante sul raschiatore in assenza di pressione.

Il TRD oltre ad avere un effetto raschiante della parte esterna del cilindro, ha la funzione di trattenerci il film d'olio residuo dal lato interno dello stelo.

Se viene utilizzata con una tenuta adeguata, permette di lavorare con ritorno idrodinamico nel cilindro.

Dati tecnici

Velocità: < 15 m/s

Temperatura: da -30°C a + 100°C per il tipo standard con O-Ring in nitrile.
Con punte fino a 120°C per periodi brevi.
da -15°C a + 150°C per il tipo con o-rings in FKM.

Materiale

Per il tipo standard PTFE caricato a bronzo ed O-Ring in nitrile.

Codice materiale: TN

Montaggio

Il montaggio risulta molto semplice in quanto è effettuato in cava semiaperta.

Inserire l'O-ring nella sede e successivamente l'elemento in PTFE.

Eliminare gli spigoli vivi e le bave nella sede.

TRD TYPE WIPER RING

Description

The TRD wipers are made of a PTFE element and an O-Ring having a sealing effect in the static part and, at the same time has an energizing effect on wiper in the absence of pressure.

The TRD also has a scraping effect on the outside of the Cylinder and maintains a residual oil film on the internal part of the rod.

Used with proper sealing, allows the hydrodynamic return in the cylinder.

Technical data

Speed: < 15 m/s

Temperature: from - 30° C to + 100° C for the standard type with nitrile O-Ring.
Short peaks till +120° C
from -15°C to +150°C with FKM o-rings

Material

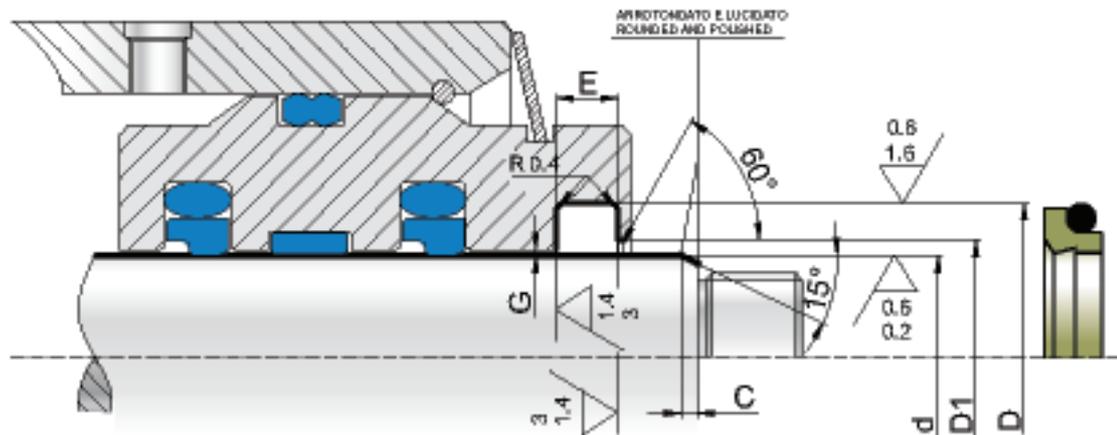

Bronze-filled PTFE for the standard type, and nitrile rubber NBR for the O-Ring.

Compound reference: TN

Assembling

Easy assembling in semi-open groove.

The O-Rings have to be fitted first into the groove and then the PTFE element. Remove flashes and/or cutting edges in the groove.

WED

RASCHIATORE BIDIREZIONALE TIPO WED

Descrizione

Il raschiatore bidirezionale tipo WED presenta il profilo combinato di un raschiatore e una guarnizione con un labbro raschiante nella parte esterna e un labbro di tenuta nella parte interna. Ha le dimensioni intercambiabili con le sedi dei raschiatori più utilizzati. Il labbro che agisce come raschiatore è molto flessibile e si adatta ai disallineamenti dello stelo. La parte di tenuta presenta un labbro più robusto e allungato per garantire la tenuta e per aiutare il film d'olio che si crea sullo stelo a rientrare nel cilindro.

Dati tecnici

Pressione: < 20 bar
Velocità: 1 m/s
Temperatura: da - 35° C a +100° C con punte fino a +110° C
Fluidi: acqua a temperatura ambiente e oli a base minerale
(vedi tabella 1 a pagina 12)

Materiale

I materiali utilizzati sono dei poliuretani che resistono agli agenti atmosferici con alto modulo elastico e resistenti all'abrasione. Il materiale standard è di durezza 93 Shore A. In alternativa è possibile utilizzare poliuretani di durezza superiore quando esistono condizioni gravose in ambienti molto inquinati. In questo caso consultare il nostro ufficio tecnico.
Codice materiale: C0

Montaggio

Il montaggio, molto semplice, è in sede semiaperta. Eliminare bave e spigoli taglienti nella sede per non danneggiare la tenuta. Per ulteriori informazioni leggere le istruzioni di montaggio a pag. 26.

WED TYPE DOUBLE ACTING WIPER

Description

The WED bidirectional scraper has a combined scraper profile where the seal is provided with a scraping lip on the outside and a sealing lip on the inside. The dimensions are interchangeable with normal scraper housings. The scraping lip is very flexible and it compensates misalignments of the rod. The sealing side has a stronger and longer lip to ensure the sealing performance and to help the oil film remaining on the rod to go back into the cylinder.

Technical data

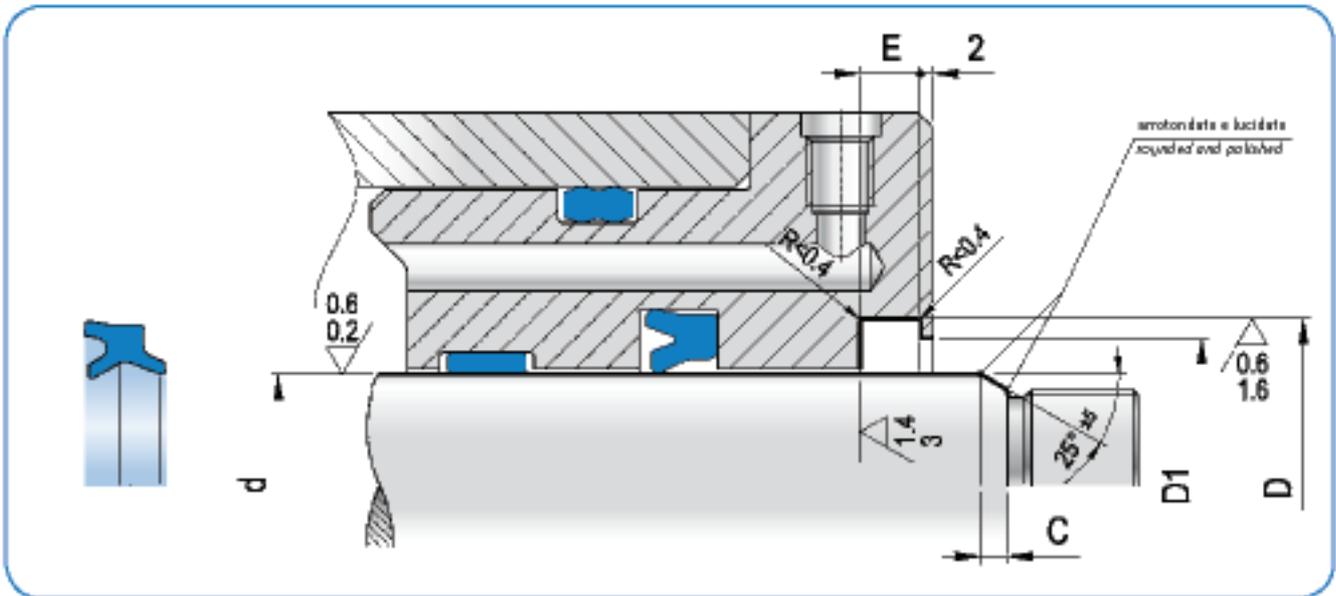

Pressure: < 20 bar
Speed: 1 m/s
Temperature: from - 35° C to +100° C with peaks till +110° C
Fluids: water at room temperature and mineral oils
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance. The hardness is 93 Shore A \pm 2. Compound reference: C0
It is also possible to use harder polyurethanes for heavy polluted environments. In case please contact our technical department.

Assembling

The assembling is extremely easy because of the semi-open groove. Remove flashes and/or cutting edges in the housing. For further information please refer to the installation instructions on page 26.

WEL

RASCHIATORE PER ESTERNO TIPO WEL

Descrizione

Il raschiatore tipo WEL viene comunemente usato nei cilindri a semplice effetto aperti su di un lato.

Per evitare che la camicia venga deteriorata da agenti atmosferici, condensa o altro nell'ambiente si utilizza un raschiatore con profilo rovesciato che ha funzione di pulitore.

Dati tecnici

Pressione: non esiste pressione ma può avvenire una leggera cavitazione.

Velocità: < 1 m/s

Temperatura: da - 35° C a + 100° C, con punte fino a + 110° C

Fluidi: acqua, polvere o altro nell'atmosfera (vedi tabella 1 a pagina 12)

Materiale

Il materiale utilizzato è un poliuretano tipo C0 ad alto modulo elastico ed a basso compression-set, con una elevata resistenza all'usura a 93 Shore A. Codice materiale: C0

Montaggio

Il montaggio avviene per accavallamento in sede semiaperta con aggancio che ha la funzione di non permettere l'espulsione del raschiatore durante l'inversione del ciclo. E' importante togliere le live e gli spigoli per evitarne il danneggiamento.

WEL TYPE EXTERNAL WIPER

Description

The WEL wiper type is commonly used in simple effect cylinders open on one side.

Because of its cleaning function, a reverse profile wiper is used to prevent bore wearing which may be caused by atmospheric agents, condensation and other environmental conditions.

Technical data

Pressure: no pressure, but a slight cavitation might occur.

Speed: < 1 m/s

Temperature: from - 35° C to + 100° C, with peaks up to + 110° C

Fluids: water, dust or other atmospheric factors (see table 1, page 12)

Material

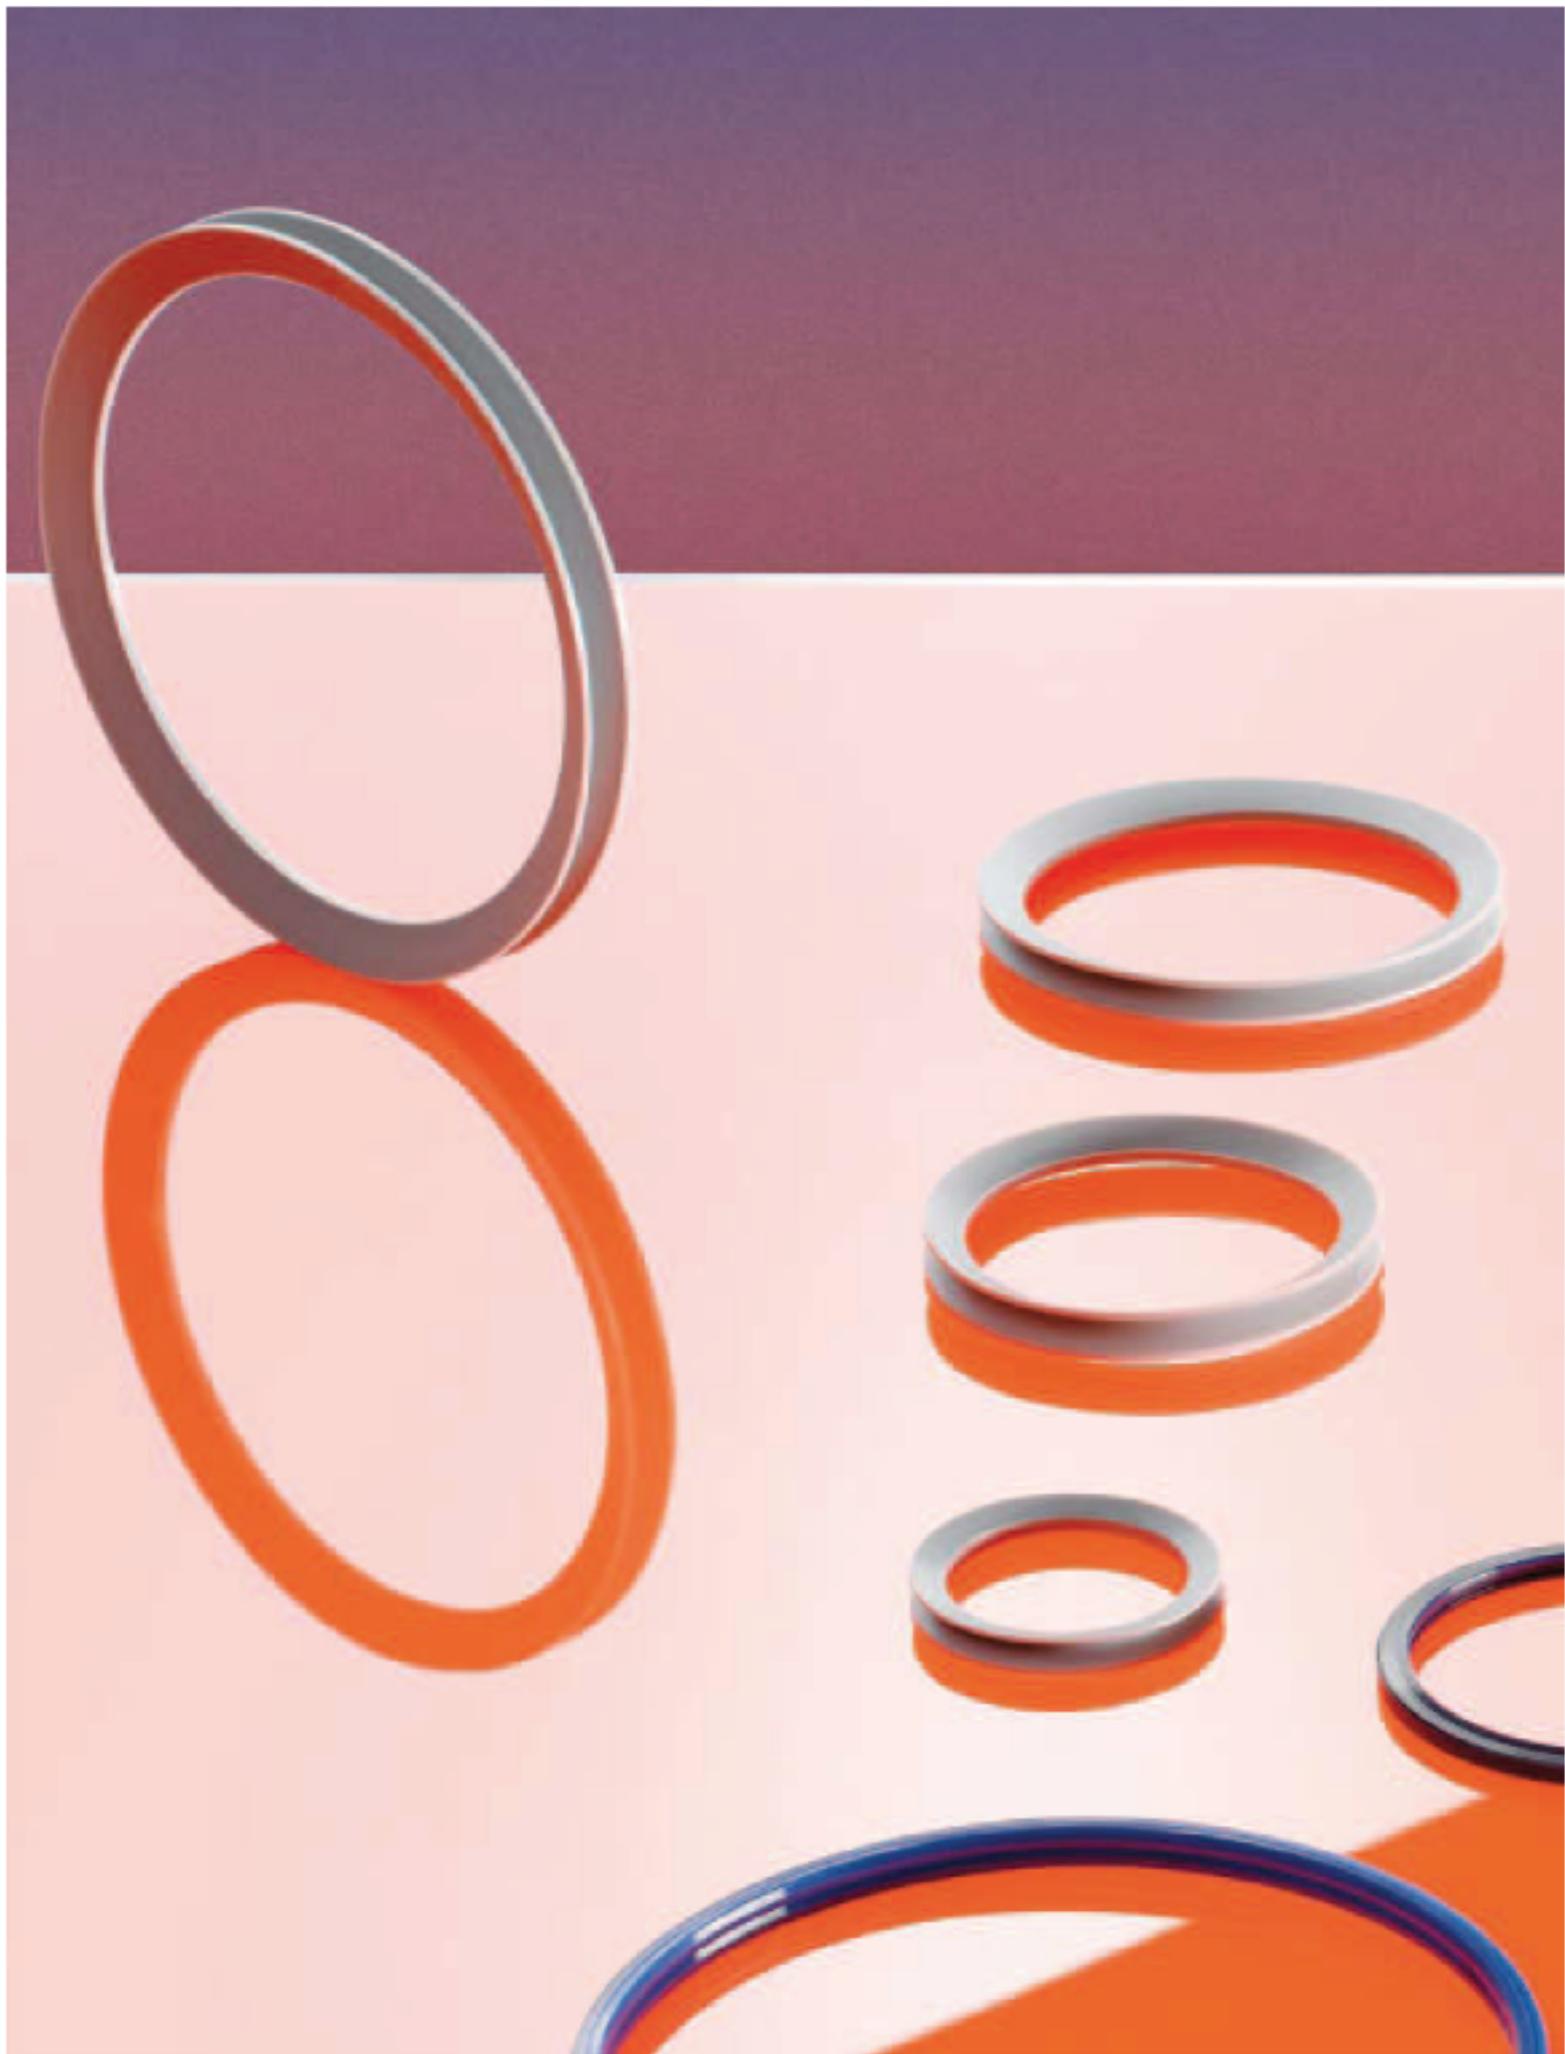

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.

The hardness is 93 Shore A \pm 2.

Compound reference: C0

Assembling

The assembling is done by overlapping in semi-open groove with a chamfer preventing the wiper extrusion during the cycle inversion. It is important to remove flashes or cutting edges to avoid damages.

Tenute statiche

Static seals

A completare il sistema di tenuta di un cilindro oleodinamico, oltre alle già descritte guarnizioni dinamiche per stelo e pistone, intervengono quelle che servono ad assicurare la tenuta tra organi reciprocamente fissi.

Le guarnizioni statiche neutralizzano le fughe di fluido attraverso la filettatura esterna della testata e quella necessaria ad avvitare lo stelo al pistone.

Esse sono normalmente realizzate con un o-ring in NBR spesso accoppiato con uno o due anelli antiestrusione necessari in presenza di pressioni elevate e giochi di accoppiamento eccessivi.

A parte le limitazioni poste dalle alte temperature o dalla compatibilità con il fluido sussiste spesso anche un problema di usura. In presenza di pressioni pulsanti che comprimono e rilasciano l'o-ring, si genera comunque un effetto che in presenza di superfici di contatto con rugosità non accurata, tende a "limare" l'elemento di tenuta, provocando perdite.

Sotto questo aspetto risulta estremamente vantaggioso l'impiego di una guarnizione tipo SSA in poliuretano che, oltre a risolvere il problema, presenta il vantaggio di utilizzare un solo elemento anziché due (o-ring e antiestrusione) con maggiore facilità di montaggio.

In addition to the already described rod and piston dynamic seals, further components granting the sealing between reciprocating static elements are involved in the hydraulic cylinder sealing system. Leakages in the static seal are prevented by the head external screw-thread and the thread for tightening the rod to the piston.

The seals are usually composed by a NBR o-ring combined with one or two anti-extrusion rings, necessary in cases of high pressure and excessive coupling clearance.

Besides the limitations resulting from high temperatures or fluid compatibility issues, wear is also a common problem. Pulsating pressures loading or unloading the o-ring, when the roughness of the contact surface does not comply with the specification range, cause "filing" of the sealing part originating a leakage.

The use of a SSA polyurethane seal is more appropriate facing this effect, having also the advantage to have a easier assembling because of one single element instead of two (o-ring and anti-extrusion ring).

SSA

GUARNIZIONE STATICA TIPO SSA

Descrizione

La guarnizione tipo SSA è stata studiata e collaudata da molti anni. E' utilizzata per impieghi statici in qualche applicazione, anche dinamici.

Viene utilizzata principalmente in sostituzione di un o-ring e di un anello antiestrusione.

L'utilizzo di un poliuretano ad alto modulo elastico e a basso compression-set fa sì che non si attorcigli durante il montaggio e che non si estruda in esercizio. L'utilizzo di un solo pezzo e il profilo simmetrico rendono più facile all'operatore il montaggio in sede. Inoltre la gestione dello stock di magazzino risulta dimezzata.

Limiti d'impiego

Pressione: < 400 bar a temperatura di 60° C
Temperatura: da - 35° C a + 100° C, con punte fino a + 110° C
Fluidi: olio e grassi minerali, gas non aggressivi
(vedi tabella 1 a pagina 12)

Materiale

Poliuretano standard a 93 Shore A \pm 2.
Codice materiale: C0

Montaggio

E' importante eliminare gli spigoli vivi e le bavanelle da sede ed eseguire uno smusso di invito per facilitare il montaggio.

SSA TYPE STATIC SEAL

Description

The SSA type static seal has been developed and tested for many years for static and sometimes dynamic sealing applications.

It is mainly used as replacement of o-ring and anti extrusion ring.

The use of a high modulus polyurethane with a low compression-set prevents winding during assembling and avoid extrusion in working conditions.

One single piece with symmetric profile allows the operator easier installation reducing at the same time the stock handling.

Technical data

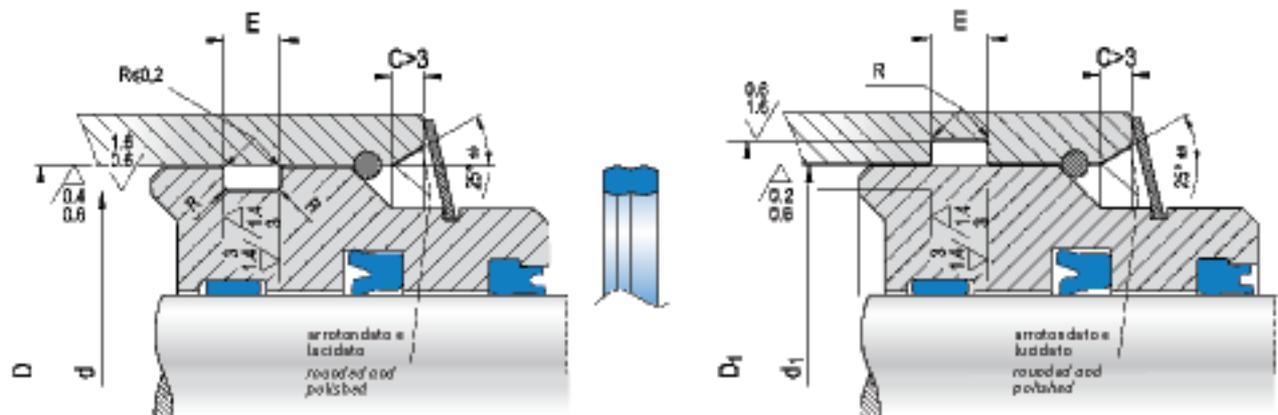

Pressure: < 400 bar at a temperature of 60°C
Temperature: from - 35° C to + 100° C with peaks till + 110° C
Fluids: mineral oil and grease, non aggressive gas
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.
The hardness is 93 Shore A \pm 2.
Compound reference: C0

Assembling

It is important to remove flashes or cutting edges to avoid damages.
It's also recommended to make a lead-in chamfer for easier assembling.

FSA

TENUTA PER FLANGE SAE TIPO FSA

Descrizione

La guarnizione tipo FSA (Flange SAE) ha avuto in questi anni un notevole sviluppo in tutte quelle applicazioni statiche dove un normale o-ring in NBR non resiste a pressione e al gioco di accoppiamento elevati.

Lo speciale profilo, l'alto modulo elastico ed un ottimo compression-set eliminano il problema dell'estrusione e delle perdite nella flangiatura di tubi.

Limiti d'impiego

Pressione: < 400 bar

Temperatura: da - 35° C a + 100° C, con punte fino a + 110° C

Fluidi: olio e grassi minerali, gas non aggressivi
(vedi tabella 1 a pagina 12)

Materiale

Poliuretano standard a 93 Shore A \pm 2.

Codice materiale: C0

Vantaggi

Ottima resistenza all'abrasione e all'estrusione.

Montaggio

E' importante eliminare gli spigoli vivi e le bavanelle nella sede ed eseguire uno smusso di invito per facilitare il montaggio.

Il montaggio in cava aperta risulta molto semplice.

FSA TYPE SAE FLANGE SEAL

Description

The FSA seal type (SAE Flange) has recently known a significant development in all static applications where a normal NBR O-ring would not resist to pressure and high coupling clearance.

The specific profile and the high modulus of elasticity, together with an excellent compression-set, avoid extrusion and leakage problems in the tube flanging.

Technical data

Pressure: < 400 bar

Temperature: from - 35° C to + 100° C with peaks till + 110° C

Fluids: oil and mineral grease, non-aggressive gases
(see table 1, page 12)

Material

The proposed material is a "C0" type polyurethane, with high elasticity modulus, low compression-set and high abrasion resistance.

The hardness is 93 Shore A \pm 2.

Compound reference: C0

Advantages

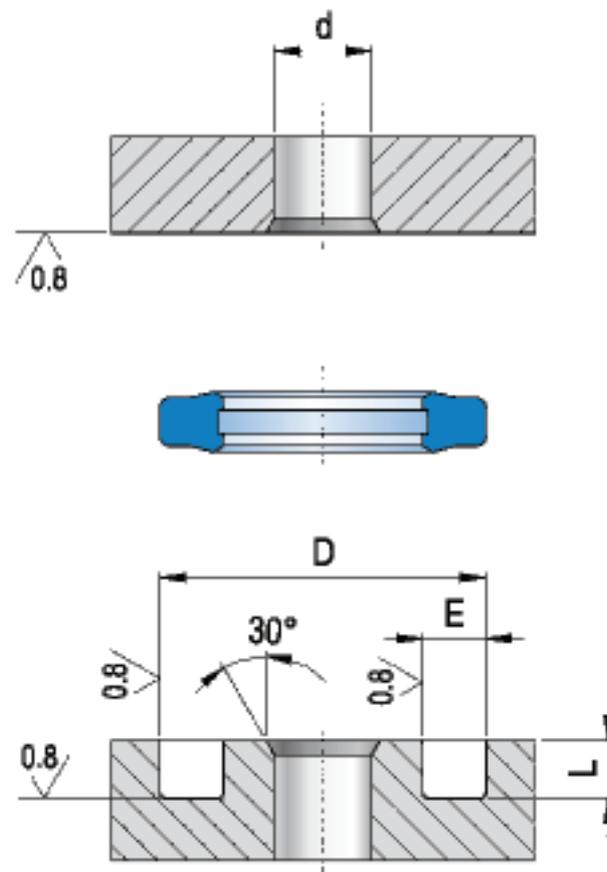

Excellent abrasion and extrusion resistance.

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages.

It's also recommended to make a lead-in chamfer for easier assembling.

The installation in open housing is extremely simple.

VRA

GUARNIZIONE A V TIPO VRA

Descrizione

La guarnizione tipo VRA è stata studiata per proteggere snodi, cuscinetti, bronzine, flange e tutte quelle parti meccaniche che lavorano in moto rotatorio o semi rotatorio.

Questo tipo di profilo realizzato in materiale B0 a bassa deformazione permanente, impedisce ad acqua, fanghi e altre impurità di penetrare all'interno del componente.

La vasta gamma di diametri facilita il costruttore nella scelta dimensionale.

Limiti d'impiego

Pressione: non essendo una guarnizione di tipo tradizionale, la pressione di esercizio è quella necessaria al mantenimento del grasso all'interno del sistema.

Temperatura: da - 35° C a + 90° C

Fluidi: olio e grassi minerali, gas non aggressivi
(vedi tabella 1 a pagina 12)

Materiale

Poliuretano standard a 90 Shore A.

Codice materiale: B0

Montaggio

E' sufficiente ingrassare le parti metalliche doveva alloggiata la guarnizione con grasso minerale.

Spigoli e bave che danneggerebbero la tenuta vanno eliminati.

VRA TYPE V-SEAL

Description

The VRA seal type has been conceived to protect joints, bearings, bronze bushes, flanges and all the mechanical parts in rotation or semi-rotation.

Made of B0 material, having a low permanent deformation, it prevents water mud and other impurities penetration.

The wide range of diameters helps the Manufacturer selection.

Technical data

Pressure: it is not a traditional seal, the working pressure is therefore the one resulting from keeping the grease within the system.

Temperature: from - 35° C to + 90° C

Fluid: mineral oil and grease, non-aggressive gas
(see table 1, page 12)

Material

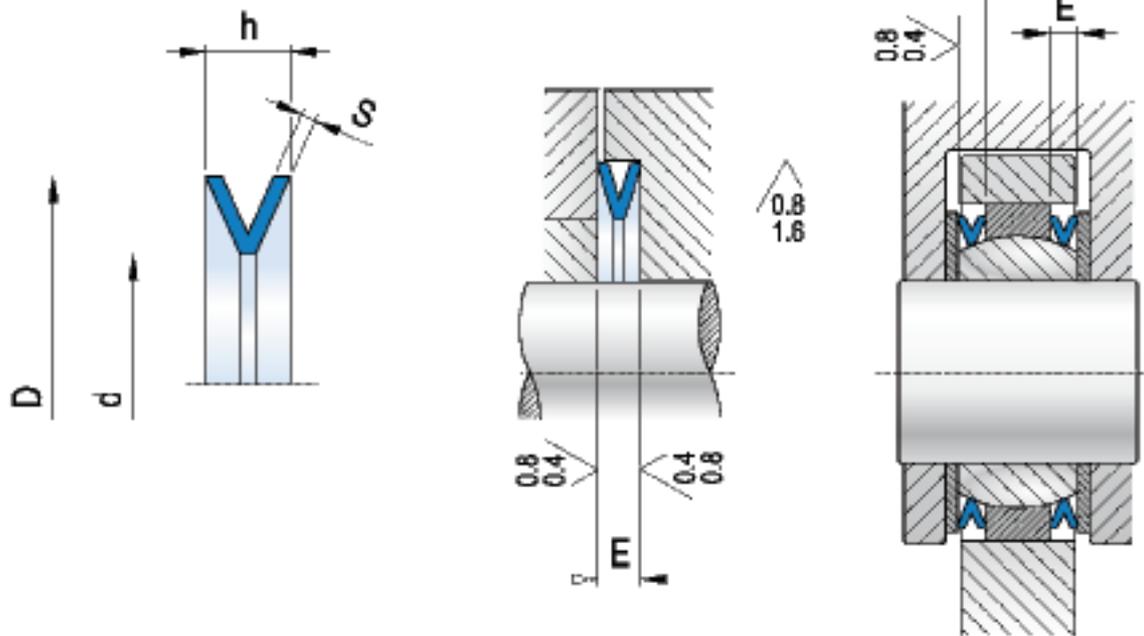

Standard polyurethane at 90 Shore A.

Compound reference: B0

Assembling

We recommend to lubricate the metal parts where the seal will be installed with mineral grease.

It is important to remove flashes or cutting edges otherwise they will reduce the sealing performance.

O-Rings

Descrizione

L'o-ring, di forma toroidale, può essere utilizzato sia per applicazioni statiche che dinamiche. Può essere fornito in varie mescole ed in varie durezza. La reperibilità di varie tipologie di materiali con differenti durezza, ha notevolmente ampliato il campo delle applicazioni. Anche se la forma toroidale è stata sostituita da altre tecnicamente più efficaci, la facilità di montaggio, la semplicità di esecuzione della sede ed il costo contenuto, hanno fatto dell'o-ring la tenuta più utilizzata.

Dimensioni, tolleranze e qualità delle sedi

La sezione nominale dell'o-ring, il diametro intero e la sede sono indicate nelle tabelle dimensionali. Le tolleranze di accoppiamento dipendono dalla pressione di esercizio, dalla temperatura del fluido e dalla durezza dell'elastomero. Il grafico di fig. 15, indica orientativamente il gioco radiale in funzione della pressione e della durezza. La qualità della sede deve rientrare entro valori che non permettano all'o-ring di usurarsi nel leggero movimento che può avere durante cambi di pressione o durante inversioni di ciclo. Nel disegno di fig. 16 sono elencate le rugosità consigliate delle sedi del pistone e dello stelo.

Fig. 15

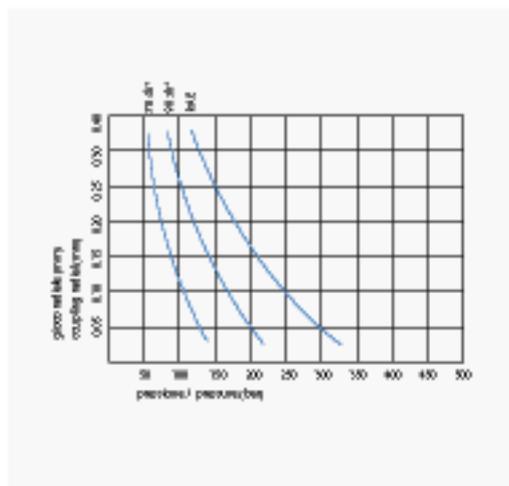

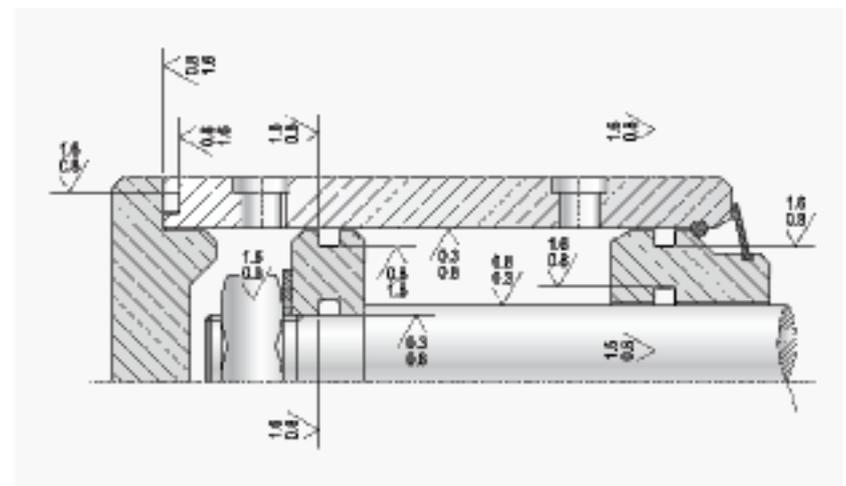

Fig. 16

Description

The o-ring presents a toroidal shape and can be used for both static and dynamic applications and can be supplied in different compounds and hardness.

The availability on the market of various types of compounds and hardness has widened the application range.

Even if the toroidal shape has been replaced in some cases by more engineered shapes, the facility in the assembling, the simple groove construction and the limited cost made the O-ring the most used sealing.

Grooves dimensions, tolerance and quality

The o-ring's nominal section, diameter and groove are shown in the dimension charts. The coupling tolerances depend on the working pressure, on the fluid temperature and on the hardness of elastomer. In Fig. 15 is shown the approx. radial gap related to pressure and hardness.

The quality of the groove must remain within certain limits to prevent the o-ring wearing, while possible small movements may occur during pressure variation or cycle inversions.

In Fig. 16 the drawing indicates the suggested roughness for piston and rod grooves.

Materiale

Esistono, come indicato nella descrizione, varie mescole e varie durezza per l'o-rings. Qui di seguito ne elenchiamo alcuni tipi ed il relativo utilizzo:

Mescole in NBR di durezza 70 Shore A standard e 90 Shore A a richiesta:

Mescole di impiego generico sia in oleodinamica che in pneumatica.

Hanno una bassa deformazione permanente e resistono molto bene ai fluidi come olio minerale, olio vegetale, grassi e composti con acqua e glicole con temperatura inferiore a 60° C.

Il range di temperatura in esercizio è compreso tra -25° C e +100° C con punte per periodi brevi fino a 120° C.

Mescole in HNBR di durezza 70 Shore A standard e 75 Shore A a richiesta:

Mescole di base come l'NBR ma con doppio legame del componente butadiene.

E' una miscela idrogenata utilizzata per impieghi a temperatura di 140° C e per periodi brevi anche a 150° C, dove la comune gomma in NBR non resiste. E' compatibile con grassi, oli minerali e vegetali e si comporta molto bene all'ossidazione.

Mescole in EPDM di durezza 70 Shore A standard e 75 Shore A, a richiesta:

Sono mescole impiegate in presenza di acqua, acqua calda, fluido per freni, fluido antigelo, glicoli ed hanno un range di temperatura compreso tra -40° C e +150° C.

Mescole in FKM di durezza 70 Shore A standard e 90 Shore A a richiesta:

Mescole in elastomero fluorurato utilizzato in applicazioni con elevate temperature e dove si richiede una inerzia chimica straordinaria.

Impiegate a contatto con solventi aromatici, fluidi a base di esteri fosforici, lubrificanti sintetici e acidi concentrati.

Possono essere utilizzate in un range di temperatura compreso tra -15° C e +200° C.

Mescole in VMQ di durezza di 65/70 Shore A:

Mescole utilizzate nell'industria alimentare e nell'industria medicale. Hanno ottimi risultati in acqua calda, ossigeno ed ozono.

Il range di temperature molto ampio (da -60° C a +220° C) allarga il campo di applicazioni.

Tutte le compatibilità con queste mescole disponibili nella tabella 1 pagina 12.

Material

There are, as indicated before, different compounds and hardness for O-rings. Some of the materials and applications are listed hereafter.

NBR 70 Shore A standard compound, NBR90 Shore A on demand:

They can be used for hydraulic and pneumatic applications.

They present low compression-set and they have a very good resistance to fluids like mineral oil, vegetal oil, greases and water-glycol compounds at temperatures not to exceeding 60° C.

The operating temperature ranges is from -25° C to +100° C, with short peaks up to 120° C.

HNBR 70 Shore A standard compound and HNBR75 Shore A on demand:

As the NBR they're basic compounds but with a double butadiene bond. It is a hydrogenated material and it can be used in applications where the normal rubber does not perform at temperatures of 140° C even with peaks of 150° C.

It is compatible with greases, mineral and vegetable oils has good behaviour against oxidation.

EPDM 70 Shore A standard compound and EPDM 75 Shore A on demand:

They can be used with water, hot water, fluids for brakes circuits, antifreeze fluid, glycols and the temperature range is from -40° C to +150° C.

FKM 75 Shore A standard compounds and FKM90 Shore A on demand:

Fluorinated elastomer compounds for high temperature applications and where high chemical inertia is requested.

They can be used in the contact with aromatic solvents, ester-phosphoric based fluids, synthetic lubricants and concentrated acids with temperature range from -15° C to +200° C.

VMQ 65/70 Shore A compounds:

They're mainly used in the food and medical industry. They give excellent results in hot water, oxygen and ozone.

The wide temperature range (from -60° C to +220° C) allows the use in several application.

For all the compounds compatibilities see table 1, page 12.

Anelli antiestrusione Back-up Rings

ANELLI ANTIESTRUSIONE

Descrizione

Come descritto in precedenza, la tenuta con O-Ring è la più semplice ed anche la più economica in condizioni di lavoro non gravose.

Quando si è in presenza di pressioni più elevate il solo O-Ring non è sufficiente. In questo specifico caso bisogna montare O-Ring con uno o due anelli antiestrusione, per il semplice o doppio effetto.

Nella gamma degli anelli antiestrusione abbiamo vari tipi di materiale: il PTFE, l'NBR e il TPE (termoplastico elastomero).

Dati tecnici

Pressione: <400 bar per il tipo RAE
<200 bar per il tipo AKN
<300 per i tipi AKC-AKS-AKW
Velocità: <1 m/s
Temperatura: da -20°C a 120°C per i tipi RAE ed AKN
-20°C/+200°C per i tipi AKC, AKS ed AKW
compatibilmente con l'O-Ring montato
Fluidi: fluidi idraulici a base minerale (vedi tabella 1 a pagina 12)

Materiale

I vari tipi di materiali proposti sono:

- TPE (termoplastico elastomero) per il tipo RAE
- NBR 90 Shore A per il tipo AKN
- PTFE per i tipi AKC-AKS-AKW

Montaggio

Il montaggio avviene in cava chiusa con la sequenza anello antiestrusione poi O-Ring.

BACK UP RINGS

Description

As described above, the sealing with O-Ring is the simplest and the most economic solution for not heavy working conditions.

But when there are high pressures the O-Ring alone is not enough. In this specific case we must mount O-ring with one or two anti-extrusion rings, for the simple or double effect.

In the range of anti-extrusion rings there're different materials: PTFE, NBR and TPE (thermoplastic elastomer).

Technical data

Pressure: <400 bar for type RAE
<200 bar for type AKN
<300 bar for type AKC-AKS-AKW
Speed: <1 m/s
Temperature: from -20 °C to +120 °C for type RAE and AKN
From -20 to +200 for type AKC, AKS and AKW
depending of the O-Ring
Fluids: mineral hydraulic fluids (see table 1, page 12)

Material

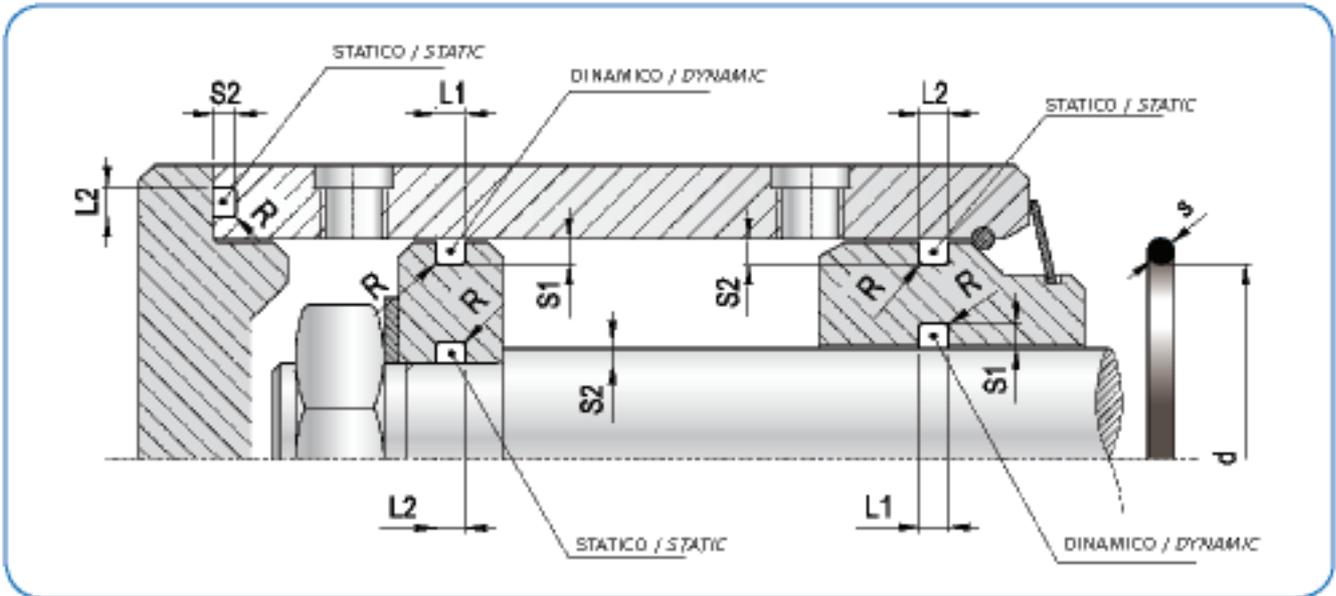

The different proposed materials are:

- TPE (thermoplastic elastomer) for type RAE
- NBR 90 Shore A for type AKN
- PTFE for types AKC-AKS-AKW

Assembling

The assembling is done in closed groove fitting the Anti-extrusion-ring before and the O-Ring after.

Montaggio Assembling

AVVERTENZE E PRECAUZIONI DI MONTAGGIO NEI SISTEMI PNEUMATICI

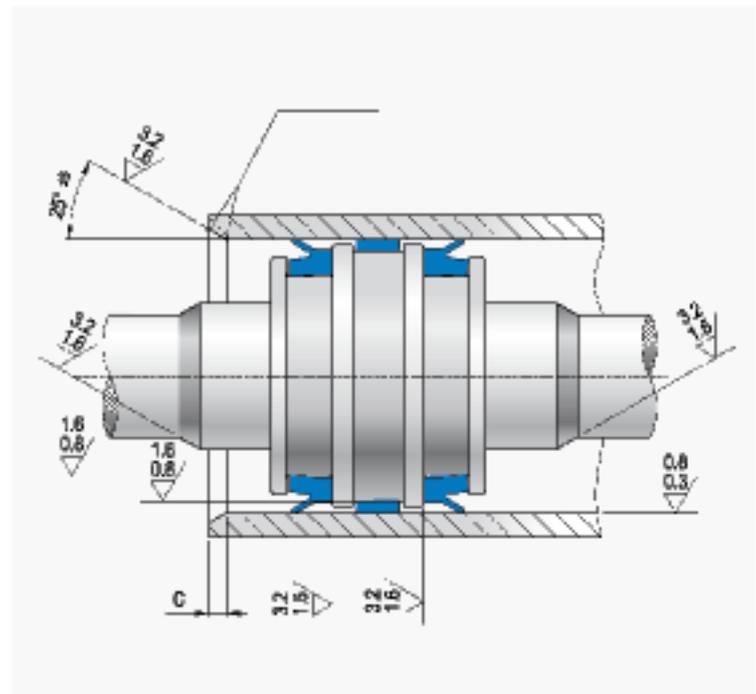

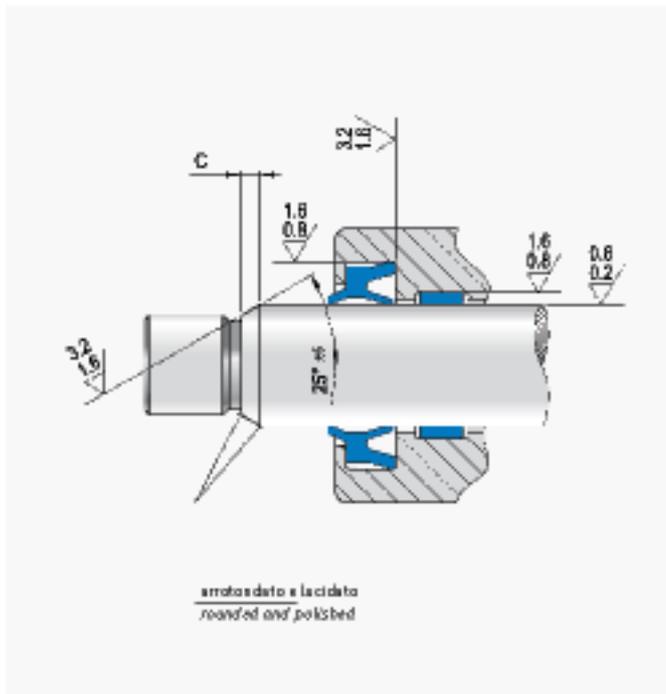

Per un ottimo funzionamento delle guarnizioni occorre che durante il montaggio non vengano tagliate o deformate in modo permanente. Si raccomanda anche di rispettare le norme internazionali ISO sia per quanto riguarda le dimensioni degli alloggiamenti che per le tolleranze. Le finiture delle superfici sono descritte nelle figure 17 e 18 sotto indicate e riportano i valori cui attenersi. La tabella sotto indica il valore in mm, per eseguire lo smusso d'invito.

Le finiture di sola rettifica non sono mai consigliate ma si raccomanda un'ulteriore lavorazione di lucidatura prima del montaggio.

ASSEMBLING INSTRUCTIONS

For a proper seals functioning it's necessary to avoid cuts or permanent deformations during the assembling process. It's also recommended to follow the ISO norms concerning housings and tolerances. Regarding the surfaces finish, take a look at the following sketches 17 and 18 indicating the values to be respected.

A further polishing operation is usually suggested before mounting, since the only grinding operation isn't recommended.

| diametri D-d diameters | < 25 | 25-60 | 61-100 | 101-180 | 181-300 | > 300 |

RSP

TENUTA STELO PER PNEUMATICA TIPO RSP

Descrizione

Alla tenuta stelo tipo RSP, rispetto a tipi similari sono state apportate alcune modifiche sul profilo per renderla più scorrevole e più sensibile alle basse pressioni.

Il labbro dinamico è arrotondato per favorire la linearità del movimento.

La profondità della gola tra il labbro dinamico e il labbro statico è più marcata per aumentare la flessibilità e per un migliore adattamento agli eventuali disallineamenti del sistema.

Limiti d'impiego

Pressione: < 20 bar
Velocità: < 1 m/s
Temperatura: da - 30° C a + 90° C
Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.
Codice materiale: B0
Materiale alternativo poliuretano a 85 Shore A.
Codice materiale alternativo: A0

Montaggio

Eliminare tutti gli spigoli vivi e le bave nella sede per facilitare il montaggio e non danneggiare la guarnizione durante l'inserimento.
Lo stelo non deve presentare bave, e deve avere uno smusso d'invito (vedi pagina 153).

RSP TYPE ROD SEAL FOR PNEUMATIC

Description

For the RSP rod seal slight changes have been made compared to the traditional rod seals profiles.

This has been done in order to obtain the following advantages:

better sliding, lower abrasion resistance and better performance also at low pressures. A rounded dynamic lip improve linear movements.

Deeper U-profile between the dynamic and the static lip improve flexibility and better perform in case of misalignments of the system.

Technical data

Pressure: < 20 bar
Speed: < 1 m/s
Temperature: from - 30° C up to + 90° C
Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

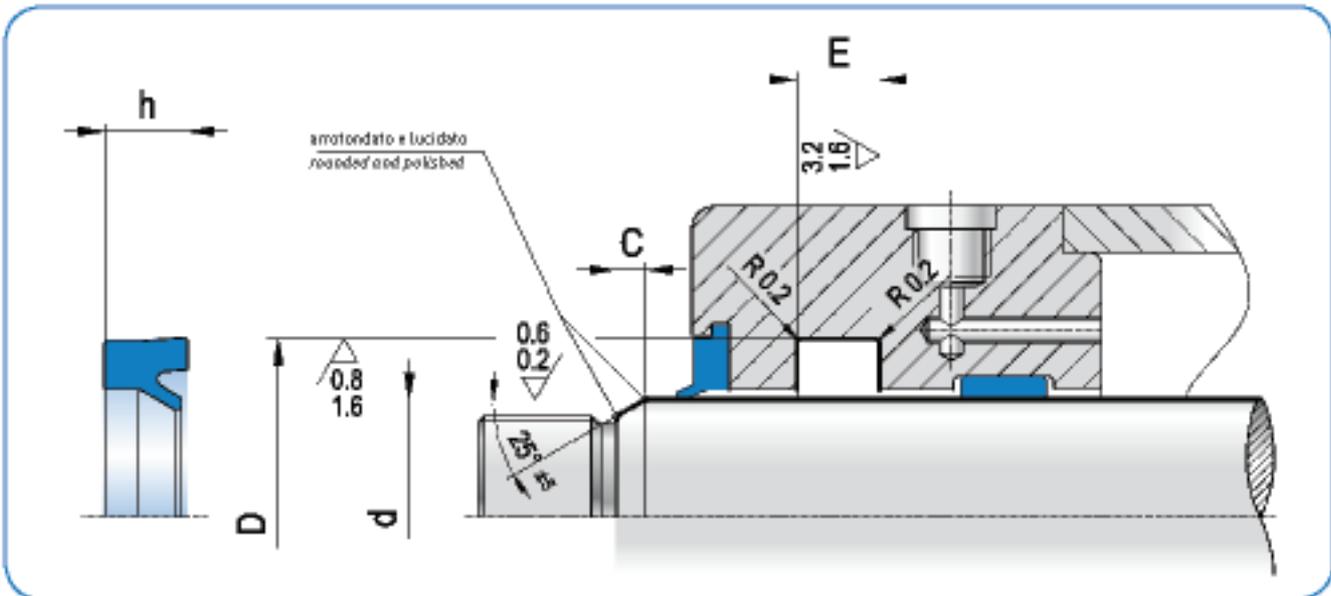

Material

Standard polyurethane 90 Shore A.
Compound reference: B0
Alternative polyurethane 85 Shore A.
Alternative compound reference: A0

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages.

The rod doesn't present flashes and must have a lead-in chamfer (see page 153).

SRS

TENUTA STELO A MOLLA TIPO SRS

Descrizione

La guarnizione tipo SRS è progettata per la tenuta steleo di cilindri pneumatici.

Dove gli ingombri lo permettono, può essere utilizzata anche su valvole pneumatiche.

Le ridotte dimensioni delle sedi consentono un'esecuzione di lavorazione macchina semplice.

Ha un profilo arrotondato al centro sul labbro dinamico e due sporgenze sul labbro statico.

Il profilo simmetrico ne facilita il montaggio.

La particolare forma a molla rende il sistema molto scorrevole anche a bassa pressione.

Limiti d'impiego

Pressione: < 20 bar

Velocità: < 1 m/s

Temperatura: da - 30° C a + 90° C

Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.

Codice materiale standard: B0

Materiale alternativo poliuretano a 85 Shore A.

Codice materiale alternativo: A0

Montaggio

Eliminare tutti gli spigoli vivi e le bave sullo steleo per evitare di compromettere la guarnizione.

SRS TYPE SPRING ROD SEAL

Description

The SRS rod seal has been designed for pneumatic cylinder applications.

The SRS can also be used for pneumatic valves where allowed by the overall dimensions.

Moreover a shorter machining of the system can be obtained thanks to the reduced overall dimensions.

The profile is rounded in the middle of the dynamic lip and it has two projections on the static lip.

This symmetric shape allows easier installation. The special spring shaped profile ensures high flexibility in the system even at low pressure.

Technical data

Pressure: < 20 bar

Speed: < 1 m/s

Temperature: from - 30° C up to + 90° C

Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

Material

Standard polyurethane 90 Shore A.

Standard compound reference: B0

Alternative polyurethane 85 Shore A.

Alternative compound reference: A0

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages.

TENUTA STELO A MOLLA TIPO SRS/N

Descrizione

La guarnizione tipo SRS/N è realizzata per tenuta pistone di cilindri pneumatici.

Dove gli ingombri lo permettono può essere utilizzata anche su valvole pneumatiche.

Le ridotte dimensioni delle sedi, consentono un'esecuzione di lavorazione macchina veloce e semplice.

Il profilo simmetrico ne facilita il montaggio.

La particolare forma a molla rende il sistema molto scorrevole anche a bassissima pressione.

Limiti d'impiego

Pressione: < 12 [bar]

Velocità: < 1 [m/s]

Temperatura: -30 °C ÷ +100 °C mescola NBR
-15 °C ÷ +150 °C mescola FKM

Fluidi: Aria lubrificata, grassi e oli minerali
(vedi tabella 1 a pagina 12)

Materiale

Il materiale standard è NBR 80 Shore A.

A richiesta materiale FKM 75 Shore A.

Codice materiale standard: N1

Montaggio

Eliminare spigoli vivi e le bave per non danneggiare la tenuta al momento del montaggio

SRS/N TYPE SPRING ROD SEAL

Description

The seal type SRS / N is a rod seal for pneumatic cylinders.

The SRS/N can also be used for pneumatic valves where allowed by the overall dimensions.

The reduced dimensions of the seat allows fast and simple machining operations.

This symmetric profile allows easier installation. The special spring shape ensure a system sliding even at very low pressure.

Technical data

Pressure: < 12 [bar]

Speed: < 1 [m/s]

Temperature: -30 °C ÷ +100 °C mescola NBR
-15 °C ÷ +150 °C mescola FKM

Fluids: Lubricated air, grease and mineral oils
(see table 1, page 12)

Material

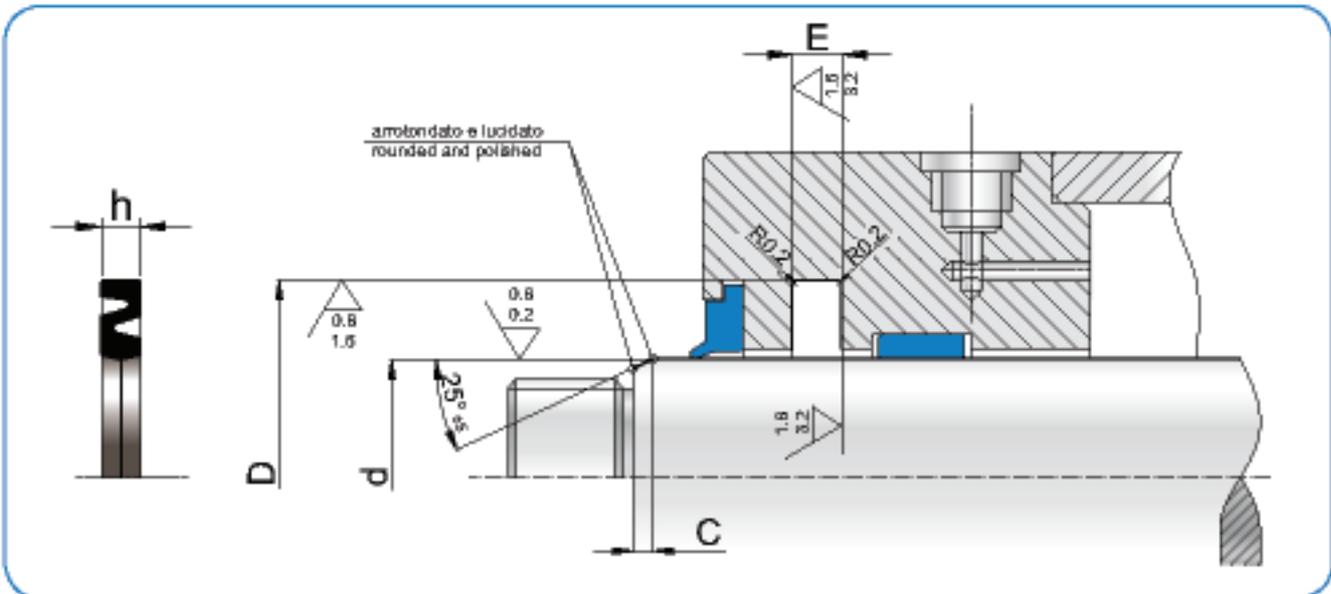

Standard material is NBR 80 Shore A.

On demand material FKM 75 Shore A

Standard compound reference: N1

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages.

CSA

GUARNIZIONI AMMORTIZZO TIPO CSA

Descrizione

L'elemento d'ammortizzo tipo CSA è studiato per la frenatura di fine corsa nei pistoni dei cilindri pneumatici.

Diverse sono le caratteristiche che concorrono all'efficacia del sistema frenante della guarnizione CSA:

- il profilo raschiante con lo smusso d'invito che facilita l'inserimento dell'ogiva;
- le scanalature all'esterno che permettono l'allineamento;
- il bordo alla base dell'ammortizzo;
- l'utilizzo del poliuretano che grazie al suo alto modulo elastico e alla sua alta resistenza all'urto garantisce una lunga durata in esercizio.

Limiti d'impiego

- Pressione: < 20 bar
Velocità: < 1 m/s
Temperatura: da - 30° C a + 90° C
Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Il materiale standard è un poliuretano a basso compression-set con una buona flessibilità a freddo.
Materiale standard poliuretano a 90 Shore A.
Codice materiale standard: B0
Materiale alternativo poliuretano a 93 Shore A.
Codice materiale alternativo: C0

Montaggio

Il montaggio avviene in sede semiaperta, pertanto si consiglia di eliminare tutti gli spigoli vivi e le bavure per evitare di compromettere la guarnizione. Lubrificare con grasso per assicurare una maggiore durata della guarnizione.

CSA TYPE CUSHIONING SEAL

Description

The CSA cushioning seal is designed for braking points at

the end-stroke of pneumatic cylinders.

Several elements contribute to the increased efficiency of the CSA seal braking system:

- the scraping profile with lead-in chamfer for better insertion of the shoulder;
- the external grooves granting auto-alignment;
- the edge at the bottom of the cushioning;
- the use of polyurethane which ensures a long service life thanks to the high modulus of elasticity and the very good impact resistance.

Technical data

- Pressure: < 20 bar
Speed: < 1 m/s
Temperature: from - 30° C up to + 90° C
Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

Material

The standard raw material is a low compression-set polyurethane with good flexibility at low temperature.

Standard polyurethane 90 Shore A.

Standard compound reference: B0

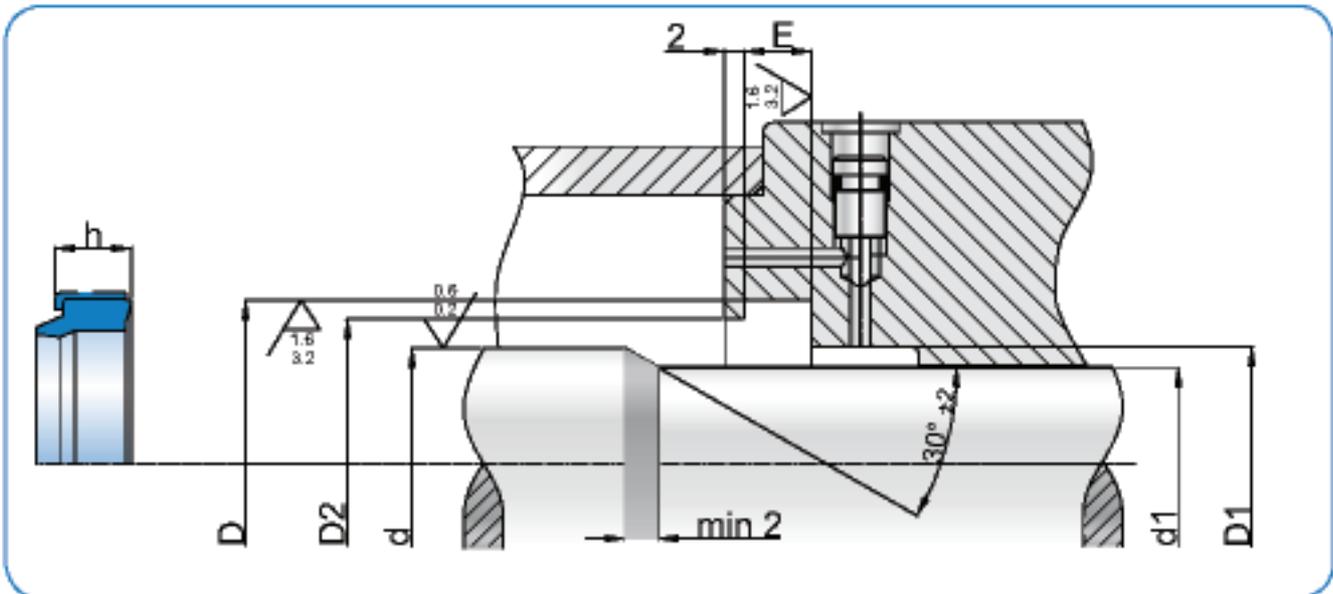

Alternative polyurethane 93 Shore A.

Alternative compound reference: C0

Assembling

The assembling is done in semi-open groove, therefore cutting edges or flashes should be removed otherwise they may influence the sealing performance.

Lubrication with grease will increase lifetime of the seal.

PSP

TENUTA PISTONE PER PNEUMATICA TIPO PSP

Descrizione

La tenuta tipo PSP è progettata per la tenuta pistone di cilindri pneumatici a semplice e doppio effetto.

La gola molto marcata tra il labbro dinamico e quello statico unitamente alla raggiatura dei due labbri di contatto aumentano la scorrevolezza della guarnizione anche in assenza di lubrificazione. Le limitate dimensioni e l'alta flessibilità del materiale rendono semplice il montaggio anche in cava chiusa.

Limiti d'impiego

Pressione: < 20 bar
Velocità: < 1 m/s
Temperatura: da - 30° C a + 90° C
Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.
Codice materiale standard: B0
Materiale alternativo poliuretano a 85 Shore A.
Codice materiale alternativo: A0

Montaggio

Eliminare tutti gli spigoli vivi e le bave nella sede del pistone per evitare di compromettere la guarnizione. Eseguire uno smusso sulla camicia del cilindro (vedi pagina 153) per facilitare il montaggio. Si consiglia di lubrificare la guarnizione per rendere il sistema molto scorrevole.

PSP TYPE PISTON SEAL FOR PNEUMATICS

Description

The PSP piston seal has been designed for single and double action pneumatic cylinders. The deep groove between the dynamic and the static lip, together with back-to-back lips radius, enhance seal sliding, even where there is a lack of environmental lubrication. The reduced dimensions, together with the high flexibility of the material, also facilitate installation in closed grooves.

Technical data

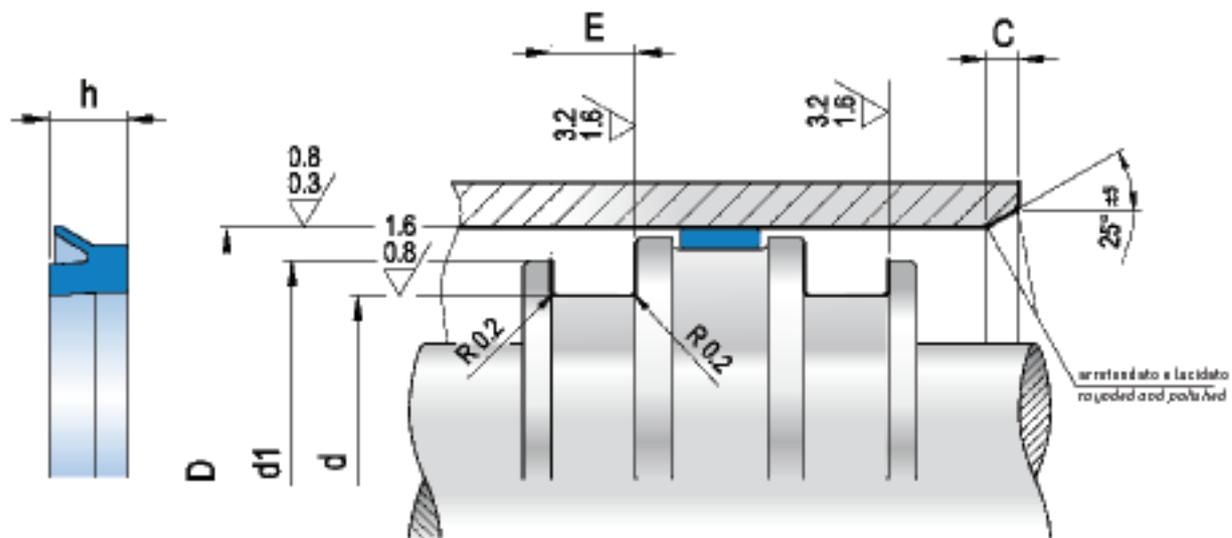

Pressure: < 20 bar
Speed: < 1 m/s
Temperature: from - 30° C up to + 90° C
Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

Material

Standard polyurethane 90 Shore A.
Standard compound reference: B0
Alternative polyurethane 85 Shore A.
Alternative compound reference: A0

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages. The rod doesn't have flashes and must present a lead-in chamfer (see page 153).

PSP/N

TENUTA PISTONE TIPO PSP/N

Descrizione

La PSP/N è una tenuta a labbro in NBR 70 Shore A che ha impieghi su pistone per cilindri a semplice doppio effetto.

Creata con un labbro dinamico arrotondato per poter muoversi anche a bassissime pressioni. Sul labbro statico e dinamico sono state create delle sporgenze che NON permettono il rovesciamento in sede, anche quando si verificano delle inversioni in assenza di pressione.

Alla base e sul fianco ci sono dei notches che evitano, in presenza di pressione tra le due tenute creatasi da micro perdite, di espellere la guarnizione.

Limiti d'impiego

Pressione: < 20 bar
Velocità: < 1 m/s
Temperatura: da - 30° C a + 100° C
Fluidi: aria lubrificata
(vedi tabella 1 a pagina 12)

Materiale

Il materiale standard è una miscela di NBR 70 Shore A. E' possibile fornire, per impieghi diversi, mesole in HNBR, EPDM, FKM e VMQ.

Montaggio

Eliminare sporgenze e spigoli taglienti sul pistone per evitare durante il montaggio, il danneggiamento della tenuta.

E' buona norma ingrassare la guarnizione sul pistone prima del montaggio.

- 1 - distanziale per autoallineamento
- 2 - raggio
- 3 - notches antiespulsione

PSP/N TYPE PISTON SEAL TYPE

Description

The PSP/N is a lip seal in NBR 70 Shore A used in single cylinder and double effect pistons.

Created with a rounded dynamic lip which moves even at very low pressure.

On the static and dynamic lip, there're protrusions avoiding any possibility of reversion in the groove even case of inversion without pressure.

There are also notches on the base and on the side avoiding the possibility of seal ejection when, in consequence of micro-leakages, there's pressure between the two seals.

Technical data

Pressure: < 20 bar
Speed: <= 1 m/s
Temperature: from - 30° C up to + 100° C
Fluids: lubricated air
(see table 1, page 12)

Material

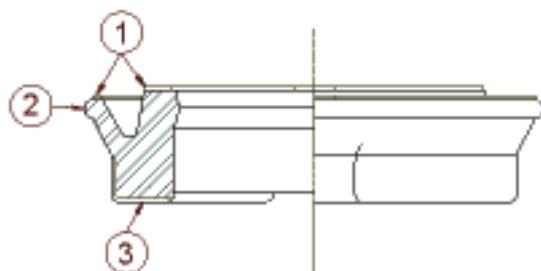

Standard material is a compound NBR 70 Shore A. For different applications HNBR, EPDM, FKM and VMQ compounds can be also supplied.

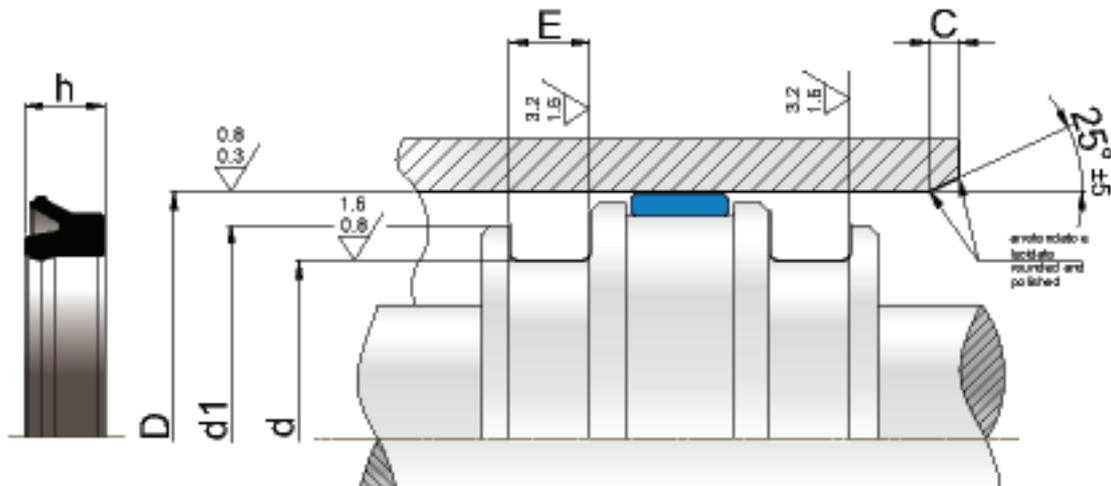

Assembling

Eliminate sharp edges and protrusions on the piston to avoid, seal damages during the assembling..

Grease the seal on the piston before fitting.

- 1 - aligning spacer
- 2 - radius
- 3 - anti ejects notches

TENUTA PISTONE MAGNETICO TIPO MPS

Descrizione

La guarnizione tipo MPS è stata studiata sia per pistoni di cilindri pneumatici compatti a corsa breve sia per il semplice e doppio effetto.

L'elemento di guida è sulla guarnizione stessa. Appositi interstizi e notches creano spazi per trattenere grasso lubrificante mantenendo molto scorrevole il pistone nel tempo.

Il magnete è alloggiato all'interno tra le due guarnizioni contrapposte.

Per problemi o soluzioni alternative, il nostro ufficio tecnico mette a disposizione specifiche progettuali personalizzate.

Limiti d'impiego

Pressione: < 20 bar
 Velocità: < 1 m/s
 Temperatura: da -30° C a +90° C
 Fluidi: aria con o senza lubrificazione, oli e grassi minerali
 (vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.
 Codice materiale standard: B0
 Materiale alternativo poliuretano a 85 Shore A.
 Codice materiale alternativo: A0

Montaggio

Eliminare tutti gli spigoli vivi e le bave nella sede del pistone per evitare di compromettere la guarnizione. Il montaggio si effettua per accavallamento della guarnizione sul diametro del pistone. Importante: il pistone deve essere sagomato esattamente come da disegno della tabella dimensionale MPS.

MPS TYPE MAGNETIC PISTON SEAL

Description

The MPS seal has been specifically designed either for pneumatic compact short stroke cylinders and single/double effect cylinders.

The guiding element is integrated on the seal. Specific notches keep the lubricant grease maintaining a sliding effect on the piston for long time.

The magnet is located between the two opposed gaskets.

For specific needs or problems, our technical office is at your complete disposal with tailor-made solutions.

Technical data

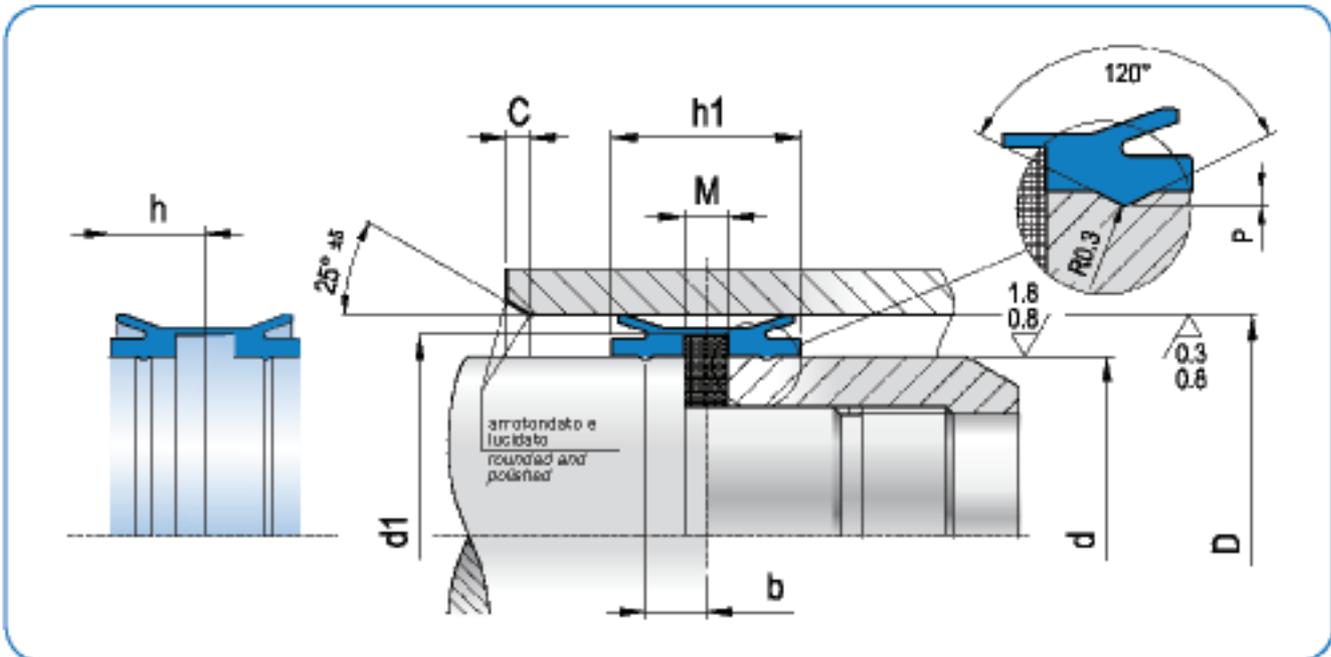

Pressure: < 20 bar
 Speed: < 1 m/s
 Temperature: from -30° C up to +90° C
 Fluids: air with or without lubrication, mineral oils or grease
 (see table 1, page 12)

Material

Standard polyurethane 90 Shore A.
 Standard compound reference: B0
 Alternative polyurethane 85 Shore A.
 Alternative compound reference: A0

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages. The installation is made by overlapping the seal on the piston diameter. Warning: the piston must be correctly shaped according to the drawing of the MPS dimensions table.

SPS

TENUTA PISTONE A MOLLA TIPO SPS

Descrizione

La guarnizione tipo SPS è realizzata per la tenuta pistone di cilindri pneumatici. Dove gli ingombri lo permettono, può essere utilizzata anche su valvole pneumatiche. Le ridotte dimensioni delle sedi consentono un'esecuzione di lavorazione macchina semplice. Ha un profilo con la tenuta arrotondata al centro al labbro dinamico e due sporgenze sul labbro statico. Il profilo simmetrico ne facilita il montaggio. La particolare forma a molla rende il sistema molto scorrevole anche a bassa pressione.

Limiti d'impiego

Pressione: < 20 bar
Velocità: < 1 m/s
Temperatura: da -30° C a +90° C
Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.
Codice materiale standard: B0
Materiale alternativo poliuretano a 85 Shore A.
Codice materiale alternativo: A0

Montaggio

Eliminare tutti gli spigoli vivi e le bave sulla camera per evitare di compromettere la guarnizione.

SPS TYPE SPRING PISTON SEAL

Description

The SPS rod seal has been designed for pneumatic cylinder applications. The SPS can also be used for pneumatic valves where allowed by the overall dimensions. Moreover a shorter machining of the system can be obtained thanks to the reduced overall dimensions. The profile is rounded in the middle of the dynamic lip and it has two projections on the static lip. This symmetric shape allows easier installation. The special spring shaped profile ensures high flexibility in the system even at low pressure.

Technical data

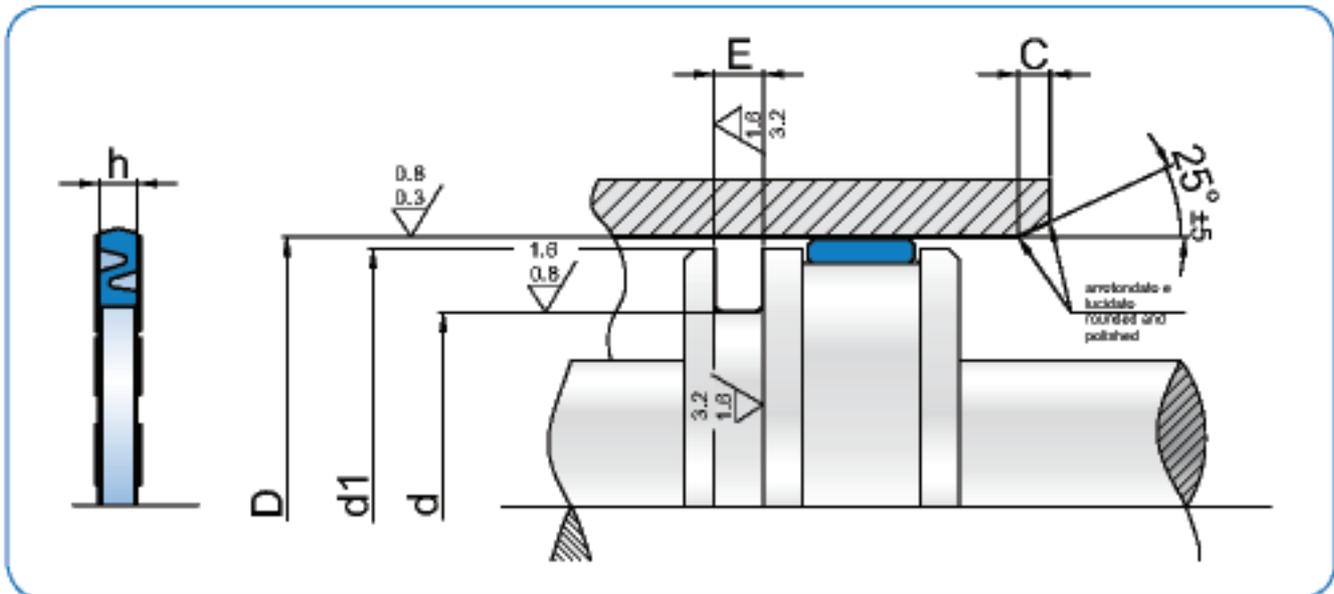

Pressure: < 20 bar
Speed: < 1 m/s
Temperature: from -30° C up to +90° C
Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

Material

Standard polyurethane 90 Shore A.
Standard compound reference: B0
Alternative polyurethane 85 Shore A.
Alternative compound reference: A0

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages.

SPS/N

TENUTA PISTONE A MOLLA TIPO SPS/N

Descrizione

La guarnizione tipo SPS/N è realizzata per tenuta pistone di cilindri pneumatici.

Dove gli ingombri lo permettono può essere utilizzata anche su valvole pneumatiche.

Le ridotte dimensioni delle sedi, consentono un'esecuzione di lavorazione macchina veloce e semplice.

Il profilo simmetrico ne facilita il montaggio.

La particolare forma a molla rende il sistema molto scorrevole anche a bassissima pressione.

Limiti d'impiego

Pressione: < 12 [bar]

Velocità: < 1 [m/s]

Temperatura: da -20 °C a +100 °C mescola NBR
da -15 °C a +150 °C mescola FKM

Fluidi: aria lubrificata, grassi e oli minerali
(vedi tabella 1 a pagina 12)

Materiale

Il materiale standard è NBR 80 Shore A.

A richiesta materiale FKM 75 Shore A.

Codice materiale standard: N1

Montaggio

Eliminare spigoli vivi e le bave per non danneggiare la tenuta al momento del montaggio

SPS/N TYPE SPRING PISTON SEAL

Description

The seal type SPS / N is a rod seal for pneumatic cylinders.

The SPS/N can also be used for pneumatic valves where allowed by the overall dimensions.

The reduced dimensions of the seat allows fast and simple machining operations.

This symmetric profile allows easier installation. The special spring shape ensure a system sliding even at very low pressure.

Technical data

Pressure: < 12 [bar]

Speed: < 1 [m/s]

Temperature: from -20 °C to +100 °C mescola NBR
from -15 °C to +150 °C mescola FKM

Fluids: Lubricated air, grease and mineral oils
(see table 1, page 12)

Material

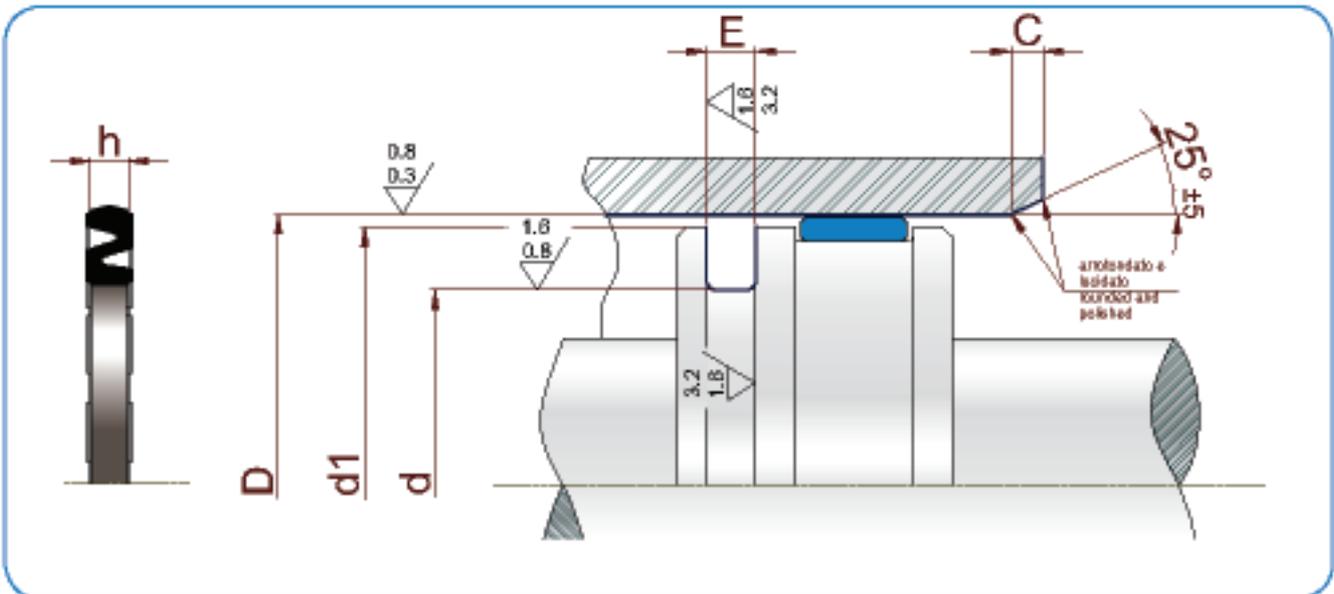

Standard material is NBR 70 Shore A.

On demand material FKM 75 Shore A

Standard compound reference: N1

Assembling

It is important to remove flashes or cutting edges in the housing to avoid damages.

MPP

PISTONE MONOBLOCCO TIPO MPP

Descrizione

Il pistone monoblocco tipo MPP è realizzato in gomma nitrilica di durezza 75 Shore A vulcanizzata su inserto metallico.

Si usa normalmente in applicazioni pneumatiche nei cilindri a semplice e a doppio effetto. Il profilo a labbri di tenuta arrotondati, facilita lo scorrimento evitando il fenomeno di Stick-Slip. La camera porta lubrificante tra i due labbri di tenuta, garantisce nel tempo la linearità al movimento assiale. I distanziali in senso dello scorrimento, auto-allineano il pistone alla camicia, dove ci fossero carichi radiali forti il pistone nella parte interna ha, da entrambi i lati, alcuni bassorilievi che facilitano il primo distacco durante l'inversione di marcia.

Dati tecnici

Pressione: < 20 bar
 Velocità: < 1 m/s
 Temperatura: da - 30° C a + 100° C
 Fluidi: aria (lubrificata e non) , grasso, ecc.
 (vedi tabella 1 a pagina 12)

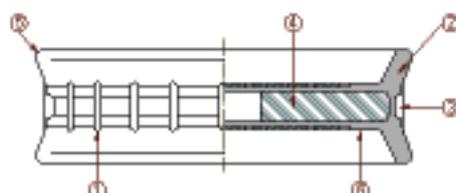

Materiale

Il materiale utilizzato è la combinazione di gomma NBR 75 Shore A con inserto acciaio. E' possibile fornire il pistone anche in FKM per impieghi ad alte temperature.

Montaggio

Eliminare spigoli vivi all'imbocco camicia-cilindro per evitare di compromettere la guarnizione.
 Ingrassare il pistone prima del montaggio.

- 1 - distanziale per autoallineamento
- 2 - miscela in NBR 75 Shore A
- 3 - gola porta lubrificante
- 4 - inserto metallico
- 5 - raggio
- 6 - logo

MPP TYPE SPRING PISTON SEAL

Description

The MPP type mono-block piston type MPP is made of NBR nitrile rubber hardness 75 Shore A vulcanized on a metal insert.

It is normally used in pneumatic applications, in single and double effect cylinders. The profile with rounded edges improves the sliding and avoids Stick-Slip. The groove leads lubricant through the two sealing lips, ensuring the axial movements linearity for long time.

The sliding direction spacers, self-align piston and sleeve in case of heavy radial loads. The piston presents, on both sides of the internal part, some grooves helping breakaway during the first reverse gear.

Technical data

Pressure: < 20 bar
 Speed: < 1 m/s
 Temperature: from - 30° C up to + 100° C
 Fluids: air (lubricated or not), grease, etc.
 (see table 1, page 12)

Material

The material used is a combination of nitrile rubber NBR 75 Shore A and steel insert.

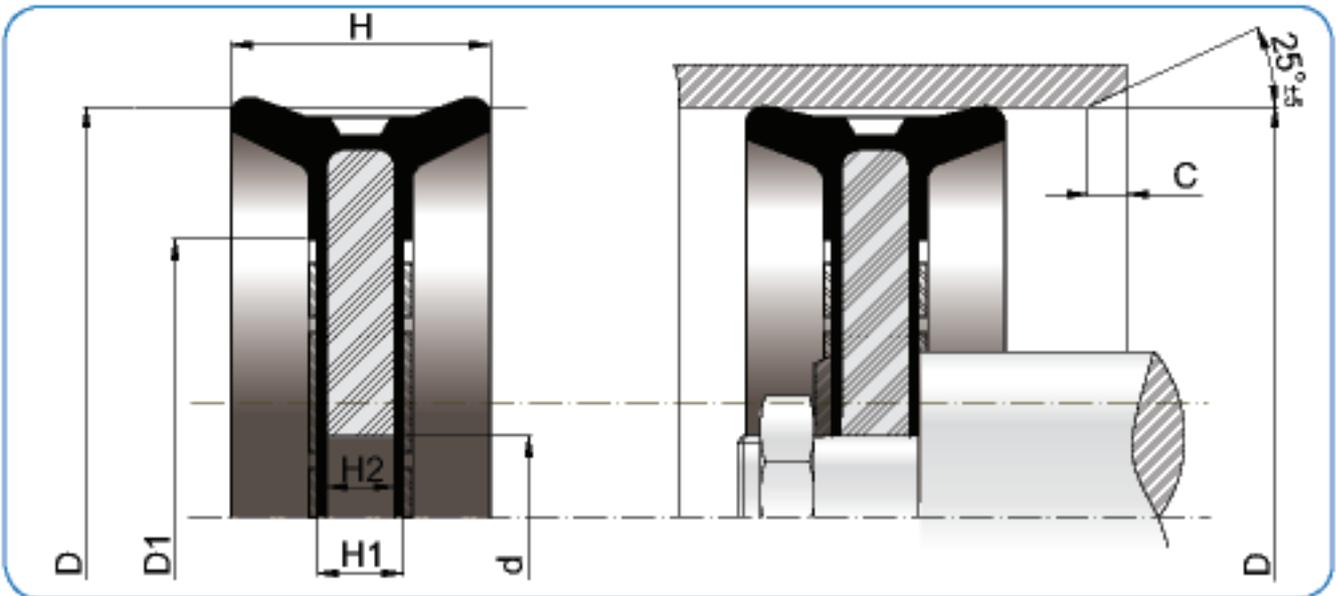

For high temperature application we could also provide FKM compound instead of NBR compound.

Assembling

Remove sharp edges at the Bore-Cylinder entry to avoid seal damages.

Grease the piston before installation.

- 1 - aligning spacer
- 2 - NBR 75 Sh A compound
- 3 - lubricant groove
- 4 - metal insert
- 5 - radius
- 6 - logo

FASCE DI GUIDA PER STELO TIPO ISA

Descrizione

Per evitare il contatto diretto tra lo stelo e la testata del cilindro, e tra il pistone e la camicia, che nella maggior parte dei cilindri pneumatici è di alluminio, si inserisce una fascia di guida tipo ISA che serve per tenere guidato tutto il sistema.

Le fasce di guida sono stampate con un materiale auto-lubrificante, non abrasivo, studiato appositamente per favorire uno scorrimento lineare. Il profilo della guida presenta smussi sia all'interno sia all'esterno che facilitano il montaggio dello stelo e del pistone.

Limiti d'impiego

Velocità: < 1 m/s

Temperatura: da - 40° C a + 115° C

Carico statico: fino a 36 N/mm²

Materiale

Resina poliacetalica modificata.

Grazie all'aggiunta di particolari additivi si è realizzato un materiale molto scorrevole e non abrasivo.

Codice materiale standard: R3

Vantaggi

- Ottimo rapporto prezzo/prestazioni
- Basso effetto stick-slip
- Buona resistenza alla compressione

ISA TYPE ROD GUIDE RING

Description

The ISA type rod guide ring is used to avoid direct contact between cylinder head and rod, and between piston and sleeve, since for the main part of the pneumatic cylinders are made of aluminium. It's also used to lead all the system.

The guide rings are in moulded, non-abrasive, self-lubricant material, especially studied to improve linear sliding.

The profile presents chamfers both sides for easier installation of rod and piston.

Technical data

Speed: < 1 m/s

Temperature: from - 40° C up to + 115° C

Static Strength: up to 36 N/mm²

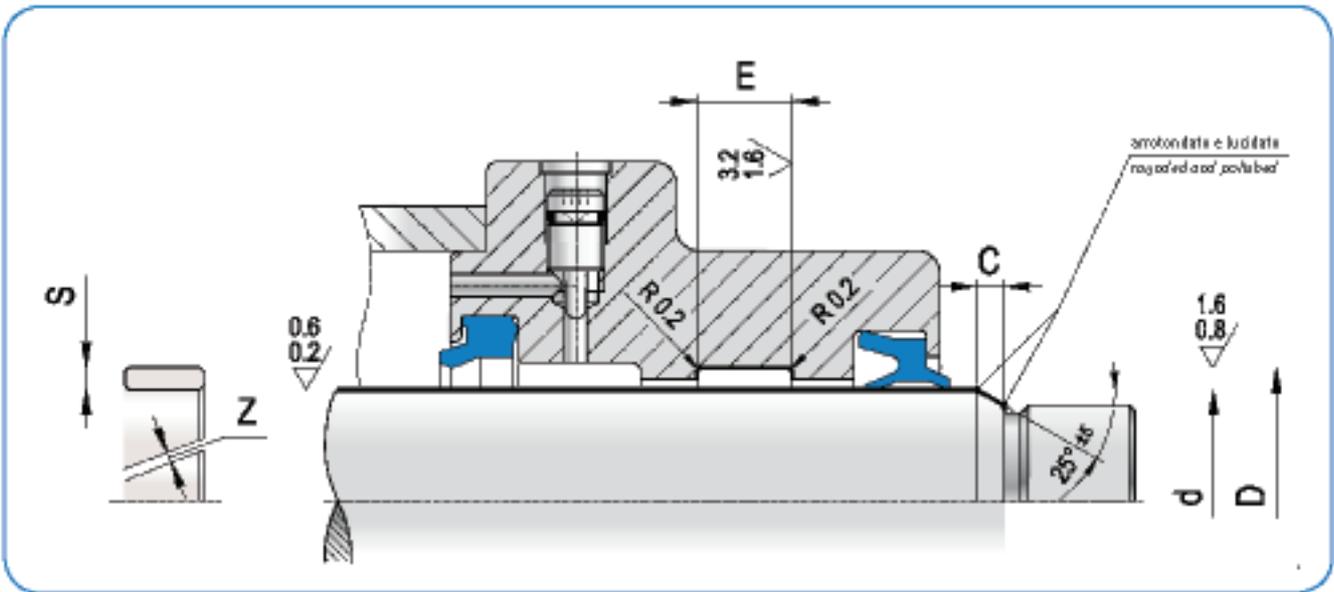

Material

Non abrasive modified Polyacetalic resin with additives improving the sliding.

Standard compound reference: R3

Advantages

- Excellent price/performance ratio
- Low stick-slip effect
- Good compressive strength

NG

NASTRO GUIDA IN PTFE TIPO NG

Descrizione

Il nastro guida NG in politetrafluoroetilene carico carbografite viene fornito in rotoli dai quali si possono ricavare guide che possono essere intercambiabili con quelle in materiale termoplastico. Vengono applicate sia su stelo che su pistone. Hanno come caratteristiche principali, la precisione dello spessore e la quasi assenza di attrito; per la sua inerzia chimica, sono compatibili con molti fluidi. Possono essere con o senza smussi di invito.

Limiti d'impiego

Velocità: < 15 m/s

Temperatura: da -50°C a +160°C con punte a 200°C

Fluidi: molti fluidi essendo un materiale con inerzia chimica elevata (vedi tabella 1 a pagina 12)

Materiale

Il materiale è un politetrafluoroetilene (PTFE) con caricato carbografite
Codice materiale: TC LCG3030

NG TYPE PTFE WEAR TAPE

Description

NG carbon-graphite filled Polytetrafluoroethylene tape is supplied in rolls. By cutting them it is possible to obtain interchangeable guides to replace thermoplastic material. They can be used for rods or pistons. Thanks to the properties (thickness accuracy, low friction and chemical resistance) are compatible with many fluids. They can be with or without chamfers.

Technical data

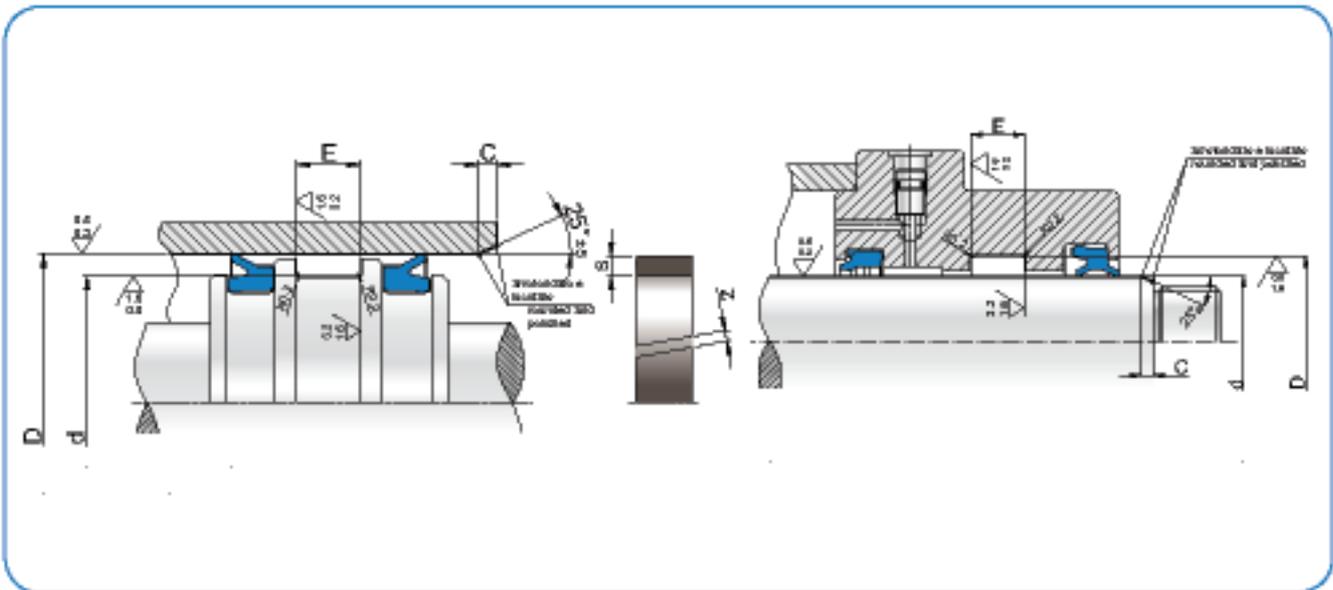

Speed: < 15 m/s

Temperature: from -50°C to +160°Ct peaks till 200°C.

Fluids: many fluids as a material with high chemical inertia (see table 1, page 12)

Material

The material is carbon-graphite filled polytetrafluoroethylene (PTFE).
Compound reference: TC LCG3030

LWA

RASCHIATORE LEGGERO TIPO LWA

Descrizione

Il raschiatore leggero tipo LWA è studiato per tener pulite le bussole a sfera nelle unità di guida.

Questo raschiatore è a contatto con alberi cementati o rettificati nella parte interna.

Alloggia nella parte esterna sul diametro della bussola e l'aggancio viene garantito da una gola (tipo quella di un seeger per esterno) dove viene inserito il gradino del raschiatore.

La lavorazione meccanica di facile esecuzione ed il minimo ingombro del raschiatore ha ampliato il campo di applicazioni anche in quello dei cilindri pneumatici.

Il labbro molto flessibile del raschiatore non pregiudica la scorrevolezza dell'unità di guida.

Limiti d'impiego

Velocità: < 4 m/s

Temperatura: da - 30° C a + 90° C

Materiale

Il materiale utilizzato è un poliuretano che resiste molto bene all'usura e benissimo alle basse temperature mantenendosi sempre flessibile.

Materiale standard poliuretano a 90 Shore A.

Codice materiale standard: B0

Montaggio

Eliminare tutti gli spigoli vivi e le bave nell'alloggiamento del raschiatore.

Si consiglia di ingrassare il sistema.

LWA TYPE LIGHT WIPER

Description

The LWA type light wiper is designed for the ball-bushings cleaning in the guide systems.

The internal part is in contact with hardened or ground shafts.

The external part is located the outside diameter of the bushing and the hanging is ensured by a groove (similar to a circlip for external use) where the wiper step is inserted.

The field of applications has been enlarged to the pneumatic cylinders thanks to the very simple mechanical execution and the reduced overall dimensions.

The highly flexible wiper lip does not interfere with the sliding of the guide system.

Technical data

Speed: < 4 m/s

Temperature: from - 30° C up to + 90° C

Material

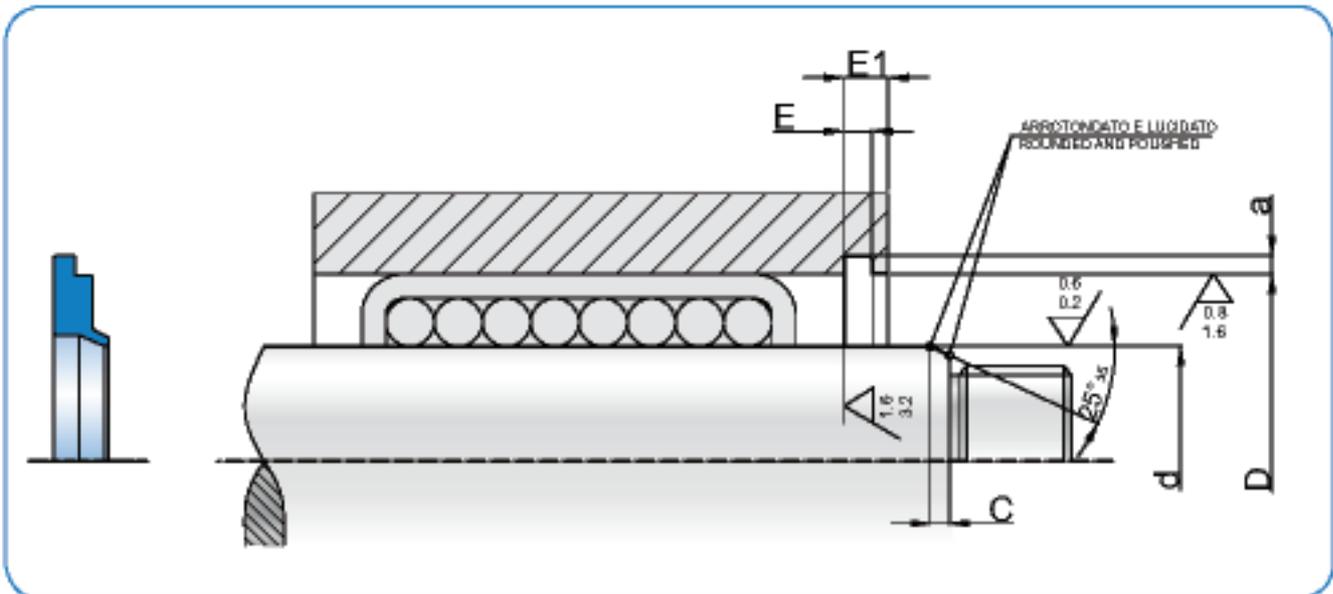

Our polyurethane is very resistant to wear and is excellent at low temperature due to its high flexibility. Standard polyurethane 90 Shore A.

Standard compound reference: B0

Assembling

Remove cutting edges and flashes in the scraper housing.

We recommend greasing the system.

BWA

RASCHIATORE BIDIREZIONALE TIPO BWA

Descrizione

L'elemento di tenuta tipo BWA ha il profilo di una guarnizione a labbri asimmetrici combinato con un raschiatore.

Alloggiato in un'unica sede, presenta numerosi vantaggi:

- ingombri ridotti;
- minor tempo di esecuzione della sede.

Limiti d'impiego

Pressione: < 20 bar

Velocità: < 1 m/s

Temperatura: da - 30° C a + 90° C

Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.

Codice materiale standard: B0

Materiale alternativo poliuretano a 85 Shore A.

Codice materiale alternativo: A0

Montaggio

La sede dove va alloggiato il raschiatore non deve presentare spigoli vivi o bave che compromettano in esercizio la durata dello stesso.

BWA TYPE BI-DIRECTIONAL WIPER

Description

The BWA sealing part combines an asymmetric lip seal profile with a wiper.

Since it is installed in a single groove, the BWA seal has several advantages:

- reduced overall dimensions;
- faster construction of the groove.

Technical data

Pressure: < 20 bar

Speed: < 1 m/s

Temperature: from - 30° C up to + 90° C

Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

Material

Standard polyurethane 90 Shore A.

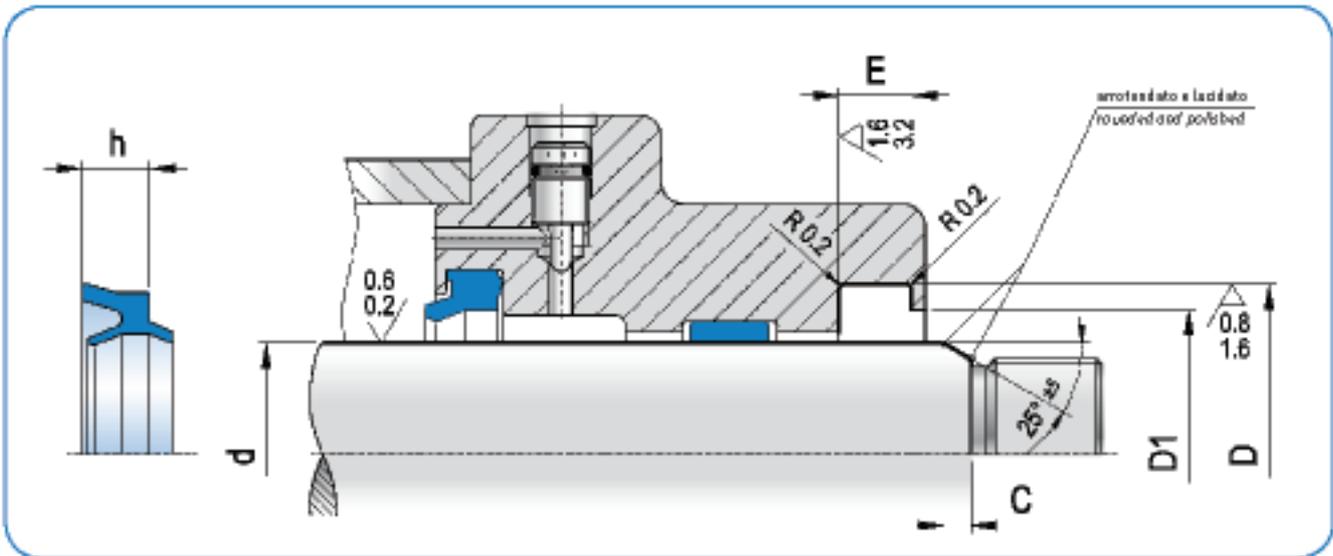

Standard compound reference: B0

Alternative polyurethane 85 Shore A.

Alternative compound reference: A0

Assembling

Remove cutting edges and/or flashes from the housing where the wiper has to be installed in order to minimise seal wear during operation.

BWA/N

RASCHIATORE BIDIREZIONALE TIPO BWA/N

Descrizione

La tenuta BWA/N per tenuta stelo con raschiatore è fatta in NBR 80 Shore A.

Creata per sopprimere le lavorazioni in sede non in tolleranza di rugosità.

Presenta sul labbro dinamico un raggio che permette di scorrere a bassissima pressione.

Ha un labbro raschiante che trattiene le impurità esterne.

Sul labbro statico sono stati creati dei notches che servono da stabilizzatori alla guarnizione nel caso ci fossero delle inversioni veloci di direzione, per inerzia.

Dati tecnici

Pressione: < 20 bar
Velocità: < 1,2 m/s
Temperatura: da - 30° C a + 100° C
Fluidi: aria lubrificata
(vedi tabella 1 a pagina 12)

Materiale

Miscela in NBR 80 Shore A.

E' possibile fornire, per impieghi diversi, miscole in HNBR, EPDM, FKM e VMQ.

Montaggio

Eliminare sporgenze e spigoli taglienti sulla testata per evitare durante il montaggio, il danneggiamento della tenuta.

E' buona norma ingrassare la guarnizione sul pistone prima del montaggio.

- 1 - distanziali stabilizzatore
- 2 - raggio
- 3 - raggio <math><-0,1 (mm)</math>

BWA/N TYPE BI-DIRECTIONAL WIPER

Description

The BWA/N rod seal with wiper is made of NBR 80 Shore A compound has been developed to operate where the machining tolerances of the seat aren't in the correct range of roughness tolerance.

The dynamic lip presents a radius allowing to slide at very low pressure.

The seal has also a scraping lip stopping the outside impurities.

The static lip includes some notches acting as seal stabilizers in case of quick inertial direction changes.

Technical data

Pressure: < 20 bar
Speed: < 1,2 m/s
Temperature: from - 30° C up to + 100° C
Fluids: lubricated air
(see table 1, page 12)

Material

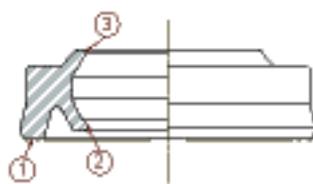

Standard material is a compound NBR 80 Shore A.

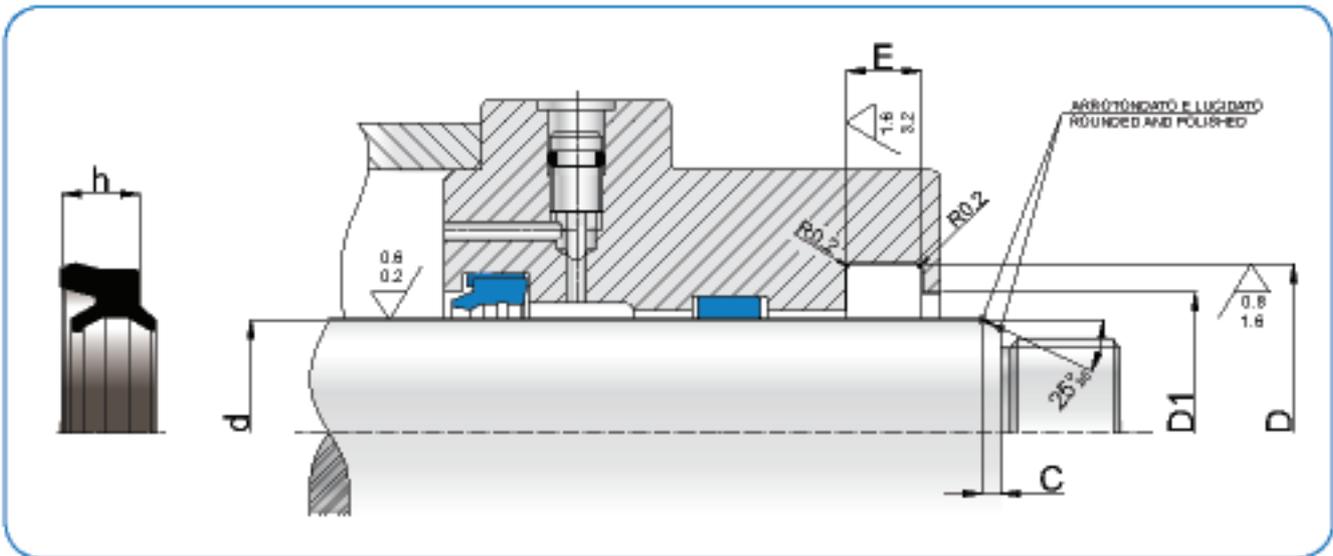

For different applications, HNBR, EPDM, FKM and VMQ compounds can be also supplied.

Assembling

Remove sharp edges and protrusions on the cylinder head to avoid damages of the seal during the assembling. Grease the seal on the piston before fitting.

BWS

RASCHIATORE BIDIREZIONALE CON GRADINO TIPO BWS

Descrizione

Il raschiatore tipo BWS è ottenuto dalla combinazione di una guarnizione a labbri asimmetrici ed un raschiatore.

Presenta sul labbro di tenuta una raggatura che lo rende molto scorrevole ed ha sul lato statico un gradino ridotto che ne facilita il montaggio soprattutto per diametri piccoli.

La parte raschiante ha un labbro molto sottile per non influenzare il primo distacco nel movimento del cilindro.

Limiti d'impiego

Pressione: < 20 bar

Velocità: < 1 m/s

Temperatura: da - 30° C a + 90° C

Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.

Codice materiale standard: B0

Materiale alternativo poliuretano a 85 Shore A.

Codice materiale alternativo: A0

Montaggio

La sede dove va alloggiato il raschiatore non deve presentare spigoli vivi o bave che compromettano in esercizio la durata dello stesso.

Attenzione: per impieghi gravosi dove sono presenti disallineamenti o fuori centro, con diametri di sede superiori a \varnothing 16 mm è consigliato un montaggio in sede non più agganciato con il solo gradino ma con tutta la base del raschiatore.

BWS TYPE BI-DIRECTIONAL WIPER WITH STEP

Description

The BWS wiper combines an asymmetric lip seal profile with a wiper.

On the sealing lip the BWS has a radius allowing greater smoothness and on the static side the reduced size step facilitates installation, especially for small diameters.

The scraping part has a very thin lip so as not to influence the stick-slip effect in the cylinder movement.

Technical data

Pressure: < 20 bar

Speed: < 1 m/s

Temperature: from - 30° C up to + 90° C

Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

Material

Standard polyurethane 90 Shore A.

Standard compound reference: B0

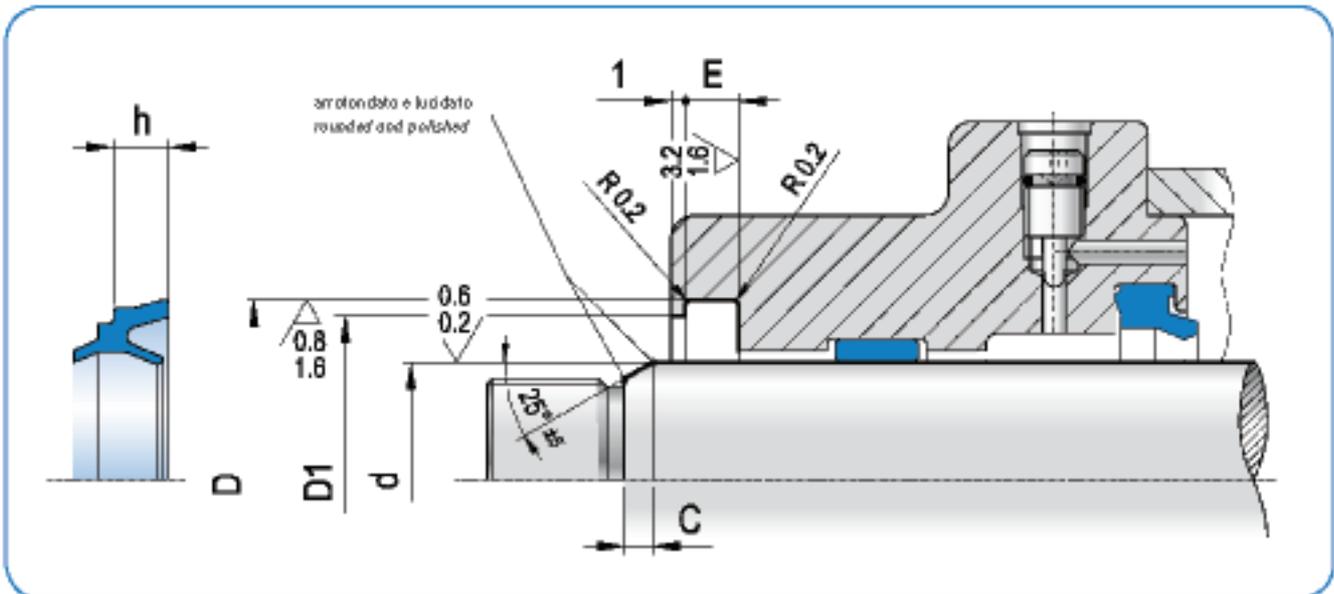

Alternative polyurethane 85 Shore A.

Alternative compound reference: A0

Assembling

Remove cutting edges and/or flashes from the housing where the wiper has to be installed in order to minimise seal wear during operation.

Warning: for heavy duty applications showing misalignments or imbalance and with diameters bigger than \varnothing 16 mm, it's recommend to hang the base of the wiper to the housing and not only to the step.

BWH

RASCHIATORE BIDIREZIONALE CON GANCIO TIPO BWH

Descrizione

La particolare forma e profilo del raschiatore con aggancio tipo BWH e la sede completamente aperta, ne consentono un rapido montaggio sia in automatico che in manuale.

La sede completamente aperta con una fresatura sulla parte laterale consente di sostituire il raschiatore molto facilmente.

Lo speciale profilo, che combina la tenuta e il raschiatore è molto robusto e consente allo stelo anche significativi disallineamenti senza il pericolo di espulsione dalla sede.

Inoltre, la forma dei labbri statici impedisce alle impurità di penetrare nel cilindro.

Limiti d'impiego

Pressione: < 20 bar

Velocità: < 1 m/s

Temperatura: da - 30° C a + 90° C

Fluidi: aria con o senza lubrificazione, oli e grassi minerali
(vedi tabella 1 a pagina 12)

Materiale

Materiale standard poliuretano a 90 Shore A.

Codice materiale standard: B0

Materiale alternativo poliuretano a 93 Shore A.

Codice materiale alternativo: C0

Montaggio

E' consigliato durante il montaggio lubrificare la parte interna del raschiatore, mentre occorre evitare di lubrificare la parte esterna e la cava per il pericolo di espulsione dalla sede.

Eliminare tutti gli spigoli vivi e le bave nella sede per facilitare il montaggio e non danneggiare la guarnizione durante l'inserimento.

BWH TYPE BI-DIRECTIONAL WIPER WITH HOOK

Description

The main characteristic of the hooked profile of the BWH wiper is to enable easy and fast installation into a complete open housing, both automatically and manually.

The groove is completely open with a lateral milling which allows the wiper to be replaced easily.

The special profile combining seal and wiper is very strong and allows important rod misalignments without any danger of ejection from the seat.

Moreover, the static lips profile keeps the cylinder free from outside impurities.

Technical data

Pressure: < 20 bar

Speed: < 1 m/s

Temperature: from - 30° C up to + 90° C

Fluids: air with or without lubrication, mineral oils or grease
(see table 1, page 12)

Material

Standard polyurethane 90 Shore A.

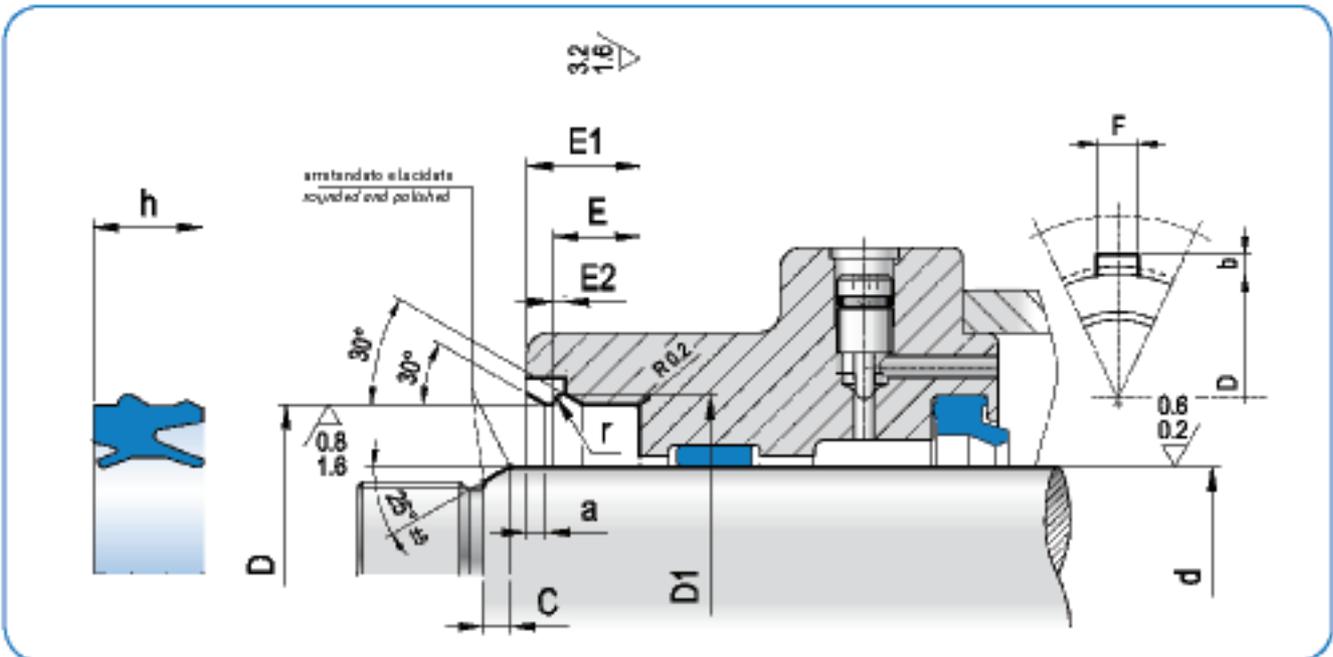

Standard compound reference: B0

Alternative polyurethane 93 Shore A.

Alternative compound reference: C0

Assembling

The wiper should be lubricated internally during installation. The external lubrication of the wiper and housing is not recommended due to the extrusion risk of the wiper. It is important to remove cutting edges and flashes in the housing to prevent damages of seal during assembling.

Remark: please contact our technical dept. for further dimensions not included in the catalogue.

BWH/N

RASCHIATORE BIDIREZIONALE CON GANCIO TIPO BWH/N

Descrizione

La particolare geometria del raschiatore BWH/N, senza aggancio con anima metallica vulcanizzata all'interno, per sede completamente aperta, favorisce il montaggio in automatico.

Il basso rilievo creato in sede, porta SEEGER, garantisce la non espulsione del raschiatore. Anche la sostituzione in caso di manutenzione è estremamente semplice.

Lo speciale profilo, che combina la tenuta e il raschiatore in un'unica soluzione, impedisce alle impurità di penetrare nel cilindro.

Limiti d'impiego

Pressione: < 16 [bar]

Velocità: < 1 [m/s]

Temperatura: da -30°C a +100°C per la versione in NBR
da -15°C a +150°C per la versione in FKM

Fluidi: aria lubrificata, grassi e oli minerali (vedi tabella 1 a pagina 12)

Materiale

Il materiale standard è NBR 75 Shore A colore nero. In alternativa FKM 75 Shore A di colore marrone. Codice materiale standard: NG

Montaggio

Le sequenze del montaggio sono le seguenti:

- 1) Inserimento raschiatore
- 2) Posizionamento SEEGER nell'apposita nicchia

È consigliato lubrificare la sede e togliere gli spigoli vivi creati da lavorazione meccanica.

BWH/N TYPE BI-DIRECTIONAL WIPER WITH HOOK

Description

The special geometry of the wiper BWH / N, without hanging, with vulcanized metal core inside, for completely open groove, improve the assembling. The grooved seat circlip holder, avoids the scraper ejection.

The replacement is also very simple during maintenance.

The special profile combining seal and wiper in a single solution, keeps the cylinder free from outside impurities.

Technical data

Pressure: < 16 [bar]

Speed: < 1 [m/s]

Temperature: from -30°C to +100°C for NBR version
from -15°C to +150°C for FKM version

Fluids: lubricated air, grease and mineral oils (see table 1, page 12)

Material

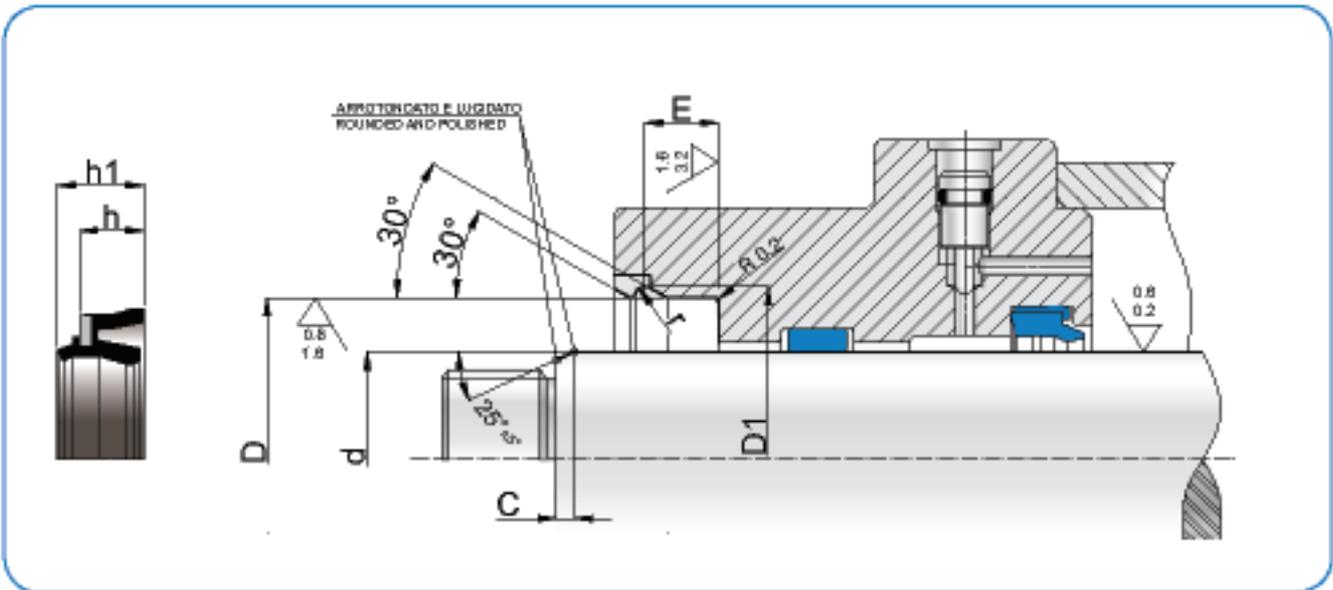

Standard material is NBR 75 Shore A black colour. In alternative FKM 75 Shore A brown colour. Compound reference: NG

Assembling

We suggest assembling as follows:

- 1) Insert scraper
- 2) Place circlip in the niche

It is recommended to lubricate the seat and remove the sharp edges originated by the machining.
